Rare Florida Flowers and Fruits

Jessamine Gardens
Jessamme Fla.
FLORIDA SOUVENIRS AND CURIOS.

We receive annually so many inquiries for Florida Souvenirs and Curios that we have decided to offer a list of some of the most useful and attractive articles. To the benefit of tourists. The items comprising this list are carefully selected, after personal inspection, and we have made every endeavor to make them desirable among the long list of Souvenirs and Curios for which Florida is justly famous, and which are so eagerly purchased by the thousands of tourists who, every winter, flock to the Land of sunshine. Many of the articles thus offered are especially appropriate for birth-day gifts, party favors, holiday presents, etc., and their value to the recipient will be vastly enhanced on account of the associations with the land where it is "Summer in the Winter time."

SOUVENIR SPOONS.

These spoons are very popular and highly appreciated souvenirs. All are heavy sterling silver and the designs finely executed.

"The Sunny South."—Finely executed die of a typical Darkey's face, surmounted by an old hat. A very pleasing and popular spoon.

Coffee, size of cut. each, $1.50
Tea. 2.00
Sugar. 3.00
Orange, very fine. 5.00
(All the above have gilt bowls).

"The Alligator."—A favorite souvenir of Florida. Heavy weight. Design same on both sides.

SUNNY SOUTH.

SHELL NAPKIN RING.

This is cut out of a curiously shaped and beautifully tinted sea shell, making a most unique ring. Price, either plain or painted ("Souvenir of Jacksonville, Fl.") 35c. each, 3 for $1.00.

BEAUTIFUL SHELLS FROM THE GULF OF MEXICO.

There are probably no curios so popular with the majority as these "gems of the ocean's bed." Everybody admires sea-shells and no cabinet collection of curios or "souvenirs" is complete without a set. few. shells from the Gulf of Mexico are justly noted for their great beauty and variety of forms, and we have received so many inquiries from them that we have decided to offer them in collections at prices so low that everyone can possess a nice assortment. We have collected them from Egmont Key, an island off the Gulf coast of South Florida, beneath the shadow of the great Egmont Lighthouse. It is not generally known that the lies buried on Egmont Key about one hundred Union Soldiers of the late war, yet this is the fact, and an almost impenetrable thicket has grown up over the spot. This historic fact adds to the interest and value of the shells as souvenirs. A very wide variation is embraced in the forms, sizes, coloring, etc., of these shells, including all the-c-shown in the cut and many others. Some appear as if highly polished or enamelled, while others look as though chiseled out of porous marble. The collections we offer are of assorted shapes, sizes and colors, and specially selected for cabinets, brackets, mantels, etc. We send them post-paid at the following very low prices: 6 for 25c., 15 for 40c., 25 for 60c., 50 for $1.00.

PENHOLDER AND PAPER CUTTER.

This is an ivory penholder and paper cutter combined, nine inches in length, with six views of St. Augustine cut on it. Very neat and pleasing and a nice keepsake. 35c. each.

Everything will be sent post-paid at the prices quoted, but cannot be sent in the same package with Seeds, Bulbs or Plants, as the postage rate is one cent per oz., while on the other rate is one-half cent per oz. We guarantee safe delivery of everything purchased from us.
A Glimpse of "The Land of Flowers."

From "The Florida Agriculturist" of September 16, 1893.

FLORAL DEPARTMENT.

For the Floral Department.

A Florida Floral Enterprise.

A visit to Jessamine Gardens.—Rare and hitherto high-priced plants placed within the reach of everybody.—An immense latticed greenhouse filled with rare Ferns, Palms and other tropical plants.—Abewilderling labyrinth of Magnolias, Hibiscuses, Jessamines and rare climbing plants.—A vine emboivered cottage, which is "a veritable artist's dream."—Water plants from all continents flourishing in Floridian waters.—A visit long to be remembered.

Plants are among the finest influences from the great silent world of nature which surrounds us, and theirs is an important part in the elevation of mankind. The love of flowers has often been a charm to lead its possessor unscathed through evil; and it is good to know how universal this love. To love is to desire, and your true plant lover will not be satisfied until he have his own to watch and tend. So does their subtle influence become more potent. The man who has it in his heart to place within the reach of the thousand the rarer specimens which before were obtainable only to the few, surely deserves the name "philanthropist." For he brings within their grasp one of the purest pleasures which material things can give—pure in the perfection and simplicity of nature's self.

It cannot fail to be a matter of congrat-
The Coontie Palms, particularly Opoponax, requires it plant all it propagated, Mr. Ellsworth tells us it is deservedly so. Cocos Weddeliana seems most popular among Palms, and all who want a fast growing and striking plant should assuredly obtain this. It requires wonderfully little attention (but it must be regular.)

There are quantities of different Palms, and beautiful varieties of the Opoponax. I thought some of the Ferns particularly fine, as also specimens of Coontie (Zamia Integ rulefûsa), our Floridian Cyad. Rare climbing plants are beginning to cover the walls. But to attempt description, or even enumeration of the different plants is to lose one's self in a bewildering labyrinth of Magnolias, Hibiscuses, Jessamines, Caoti, etc.

The most scrupulous order prevails. Not a dead leaf nor a weed is to be seen. The various foliage is bright and healthy, and here and there amagnificent blossom adds color to the scene. But this is only a nursery, and not many flowers are to be expected here. You will see them in abundance outside, in the gardens whither we presently stray—all kinds and colors from flaming Hibiscus to pale blue Plumbago.

Passing through the seed and packing house (whose size and the busy workers within bear witness to the large business done by this firm) we enter the latticed greenhouse. This is a slight worth seeing. It is over half an acre in extent, and filled with rare Ferns, Palms, and other tropical plants. Each variety fills a square of the long beds which run the entire length of the building. Narrow footwalks divide each bed. The Sago Palms attracted special attention and desire, so uniquely beautiful are they, particularly the long-leaved variety. From the extent to which it is being propagated, the Australian Silk Oak (Grevillea Robusta), seems to be a universal favorite. Mr. Ellsworth tells us it is deservedly so. Cocos Weddeliana seems most popular among Palms, and all who want a fast growing and striking plant should assuredly obtain this. It requires wonderfully little attention (but it must be regular.)

Hilda Muirhead.
Pasco Co., Fla.
JESSAMINE GARDENS,
SEASON OF 1894.

SINCE we penned our last greeting a full year has rolled past, a year heavily freighted with disaster and gloom. There have been more than the usual number of casualties by land and by sea, crops in some sections have been injured by excessive droughts, and in others totally destroyed, together with great numbers of human lives, by wind and deluge, while ever all has covered a financial depression which has served to augment the unfortunate state of affairs. Taken all in all, the world at large will bid good bye to 1893 with a sense of relief and an assurance that its successor will naturally, through the laws of reaction, be one of unusual prosperity. While droughts of exceptional severity have prevailed both in Europe and over vast sections of this country, we are happy to say the past season has been an unusually propitious one in Florida, which will yield the largest and finest orange crop ever produced in its history. Our entire crops of Seeds, Bulbs and Plants have suffered no check of growth in any way, shape or manner but are all endowed with perfect health and vigor. Never before have we possessed so fine and extensive a stock with which to meet the demands of our patrons, and every facility possible has been devised to serve all promptly and faithfully. As far as possible, our prices have been still further reduced to meet the "hard times" and make it possible for everyone to adorn their homes with rare and beautiful flowers. To all new friends and patrons we will say our plants are not grown in glass houses in artificial heat, nor forced in any way, but in latticed houses through which the outer air constantly passes. Not being forced, they are never weakened, but are stately and hardy and perfectly incurved against the fluctuating temperatures to which plants cultivated in the majority of windows are constantly subjected. That such plants give the most unbounded satisfaction is amply proved to us by the thousands of delighted testimonials which we have received during the last six years. It is with unfeigned pleasure that we hand you this, our SIXTH ANNUAL CATALOGUE, inviting your careful perusal of its contents and soliciting a share of your kind patronage. A trial order is all we ask, being willing that the character of our goods and our manner of dealing decide your future course of action with us. In the following pages we have endeavored to faithfully represent the appearance and set forth the actual merits of the Seeds, Plants and Bulbs we offer;

"But who can paint
Like Nature? Can imagination boast
Amid its gay creation, hues like hers?
Or can it rival with matchless skill
In every bud that blows?"

PLEASE READ THE FOLLOWING SPECIAL INSTRUCTIONS.

BY MAIL we send everything postage paid, at the prices quoted, to any part of the United States and Canada, and guarantee their safe arrival. Once in a great while a letter fails to reach us, or the package we send gets lost in transit. Therefore, in case this occurs, the sender, after waiting a reasonable length of time, should notify us of the fact, enclosing a duplicate order and stating how money was sent, and the matter will receive our immediate attention.

BY EXPRESS. We rejoice to be able to announce to our friends and patrons that the troublesome matter of extortionate Express Charges has at last been entirely done away with. We have succeeded in getting a reduction of rates from all the leading Express Companies, and under the following conditions shall in future pay prepay charges on all shipments desired sent by express:

If your order amount to $2.50, include 30 cents additional, and we will ship by Express, fully prepaid.

On orders of over $2.50 to $5, include 50 cents additional.

On orders of over $5 to $10, include 75 cents additional.

This small sum is positively all it will cost you, no matter where you live in the United States, to have your order fully prepaid to your express office, and no one need fear having extra charges to pay on arrival of the shipment, as we have arranged with the express companies so that all such matters will be referred back to us. But we cannot afford to prepay charges on orders of less than $2.50 but will see that shipments are billed out at the lowest possible rate. This we have exceptional facilities for attending to in our case, as our Jessamine Express Office is located in our main warehouse.

We strongly advise having plants sent by express, as we can in most cases send larger plants, and they will be packed in such a manner as cannot be done if sent by mail. In every instance the benefits derived from having your plants sent by express will be worth many times over the small additional sum which it costs you.

BY FREIGHT we do not prepay charges, and do not consider it advisable to forward perishable plants by that means to any distance. Freight service is to some extent uncertain, and there are often delays which would ruin a shipment of plants. We do not guarantee safe arrival of freight shipments.

ANY ONE adding 10 cents to their order, can have it packed in a liberal quantity of Spanish Moss, which is so beautiful for decorative purposes. Everybody is delighted with it. Besides, plants or bulbs packed in it are doubly safe and evaporation is reduced to a minimum. (See description on page 19.)

MONEY MAY BE SENT at our risk only by Money Order, Registered Letter, Draft on New York, and Express Money Order. Be sure and have all Money Orders drawn payable at Jessamine, Fl.

DO NOT SEND STAMPS in payment for goods, as it is impossible to avoid, as we cannot dispose of them except at a considerable discount. Where money cannot be sent by any of the above methods, use a Postal Note, paper money, or silver sewed or pasted up in strong paper or cloth, register the letter, and if your order amounts to 75c. or more, deduct the registry fee (8 cents) from it.

BE SURE and write your Name, Post-Office, County and State plainly, and state whether your order is to be forwarded by mail or express; and if by express, whether to be Prepaid or not.

Those sending us $1.00 may select to the amount of $1.10
Those sending us $2.00 may select to the amount of $2.30
Those sending us $3.00 may select to the amount of $3.40

 Those sending us $4.00 may select to the amount of $4.50
Those sending us $5.00 may select to the amount of $5.75
Those sending us $6.00 may select to the amount of $7.00

$57" HAVE MONEY ORDERS DRAWN PAYABLE AT JESSAMINE, FLA.

(International Money Orders at Jacksonville, Fla.)

PIKE & ELLSWORTH,
Jessamine, Pasco Co., Fla.

WAITE N. PIKE,
W. J. ELLSWORTH.
THE plants and bulbs offered under this head are those only of the most decided merit, possessing qualities which render them worthy of special mention. They have all been thoroughly tested, both here and at the North, so that their culture is no longer experimental. We assure our patrons that everything included under this head possesses the most desirable qualities calculated to recommend them to lovers of the beautiful, rare or unique; and a trial of anything here offered will not result in the disappointments attendant upon the culture of many so-called Novelties which are placed before the public without having been sufficiently tested. Our prices for these Specialties are lower in many cases than is charged by many florists for the most common stock.

The Butterfly Lily or Garland Flower.

This magnificent East Indian plant (known botanically as Hedychium Coronarium) is one of the most desirable acquisitions to a collection of flowers imaginable. While the cut gives an excellent idea of the general appearance of the plant, it conveys no idea whatever of the chaste beauty of the large, snow-white and exquisitely fragrant flowers looking almost like a bevy of large, white butterflies hovering over the plant. Both plant and roots are Canna-like, the shoots attaining a height of from two to five feet and surmounted by large terminal clusters of the beautiful flowers, more than one crop of which are produced from the same flower-stalk. Like the Canna it cannot be given too rich a soil or too much heat and moisture when growing, and it may be bedded out in the same manner in the spring if plentifully supplied with moisture in dry spells. "Thuma," of West Virginia, the well known and popular writer on horticulture, grows it in this manner and is enthusiastic in its praise. As a pot or tub plant it is truly magnificent, and if given a large pot or tub as it becomes older, it will form a dense clump of stems and be covered almost continually with a mass of its beautiful and fragrant flowers. Frequent applications of liquid manure are beneficial, and also keeping the pot standing in water two or three inches deep. The roots may be wintered in a dormant condition (in the soil) if stored in a warm, dry situation; or if kept moist and warm enough the plant will flower the whole year round.

Fine roots, only 15c. each.

Australian Silk Oak.

(Grevillea Robusta.)

A splendid ferny-leaved, evergreen plant, (not a true Oak) which should be grown by everybody as it makes a magnificent pot-plant for all sorts of decorative purposes. The cut gives but a faint idea of its beauty, for it possesses a peculiar airy gracefulness and a satiny sheen and texture which it is simply impossible for the engraver to successfully reproduce. In conjunction with Palms and Ferns, or in an ordinary collection of house plants, it is at once striking and graceful. The dust, heat and gas of living rooms has no visible effect on it and it will thrive where a Geranium will exist. No collection of plants is complete without it, and no one would be without it if its great beauty and many points of excellence were universally known. It is a decorative as a Palm, cheap as a Geranium and makes a fine specimen in one season. In the open ground in Florida it makes a superb lawn or street tree, growing with wonderful rapidity and to a great size, producing a profusion of golden yellow flowers which are exceedingly rich in honey and attract bees through several months of the year. It should be extensively planted as a street tree throughout South Florida.

Price of fine pot-grown plants, 1sc. each. Larger and very fine, 30c. each.

Maranta Arundinacea.

This is the true Arrow Root plant from which the arrow root of commerce is obtained. It is not only an interesting plant but a very beautiful foliage plant, and produces pretty, small white flowers. It soon fills a pot, making a fine specimen quite distinctive and tropical in appearance, and is very effective among other pot plants. It may also be bedded out, if desired, and will flourish in any position, no matter how poor the soil.

Fine Tubers, 15c. each.

Notice that under certain conditions we prepay all Express Charges. See Page 1.
"Lily of the Palace."

The above name is a very appropriate one for the Agapanthus (or African Lily), as it is sometimes called, for it is a royal flower, in every sense. Each crown produces an abundance of dark green, waxy, Amaryllis-like leaves which last for years, and throws up flower-stalks two or three feet tall, crowned with immense umbels of from 30 to 100 exquisitely, long-tubed, Lily-like flowers which remain unfaded for weeks. It may be confined to a good sized pot, plan or keg, but if not divided will finally fill a tub, as shown in the catalogue, and produce 30 to 40 stalks of flowers at one time.

Blue Agapanthus.—Flowers a lovely sky-blue color. One of the handsomest pot plants in cultivation. Fine plants, 35c. each.

White Agapanthus.—Just like the blue in every respect except the color of the flowers, which is pure white. A very rare sort, hardly known outside of the very choicest collections of plants. Fine, strong plants, 35c. each.

SPECIAL OFFER.—One of each for only 45c.

Coontie, Zamia Integifolia.

This strikingly beautiful and interesting Cycad, a native of the extreme southern part of this state, is something between a Palm and a Fern, but is neither, and is of extreme stateliness and beauty. The leaves are pinnate and Palm-like, but curled into a stem or trunk as it grows older. The leaves, which are like elegant Fern-fronds, are remarkable for their great beauty, which is retained for years, as the leaves do not die and drop off every year, as they do on most plants. While the frond-like leaves are of most graceful appearance, they are also of a firm, strong texture and difficult to injure. They are of a dark, deep green, and look as if varnished, which gives them a beautiful shiny appearance. The leaves are in great demand for floral decorations and often sell for $2 each. It may be well termed a "family plant," as it lives to a great age, and can be kept in the family from generation to generation, growing finer and more valuable every year, proving an indispensable decoration for all occasions. As a decorative plant, both for indoor and outdoor use, it is without a rival, for its noble and majestic habit is most impressive; and it is very hardy, its heavy, glossy fronds resisting alike the gas, cold and dust to which decorative plants must frequently be exposed. It is suited with my garden soil. Pots should be well drained and water applied sparingly during the winter. Northern florists catalogue this plant at from $1.50 to $10.00 each, according to size, which of course keeps it out of the hands of flower lovers in general. We are glad to be able to offer fine bulbs, with leaves five to nine inches long, post-paid, for 35c.; second size, larger and more leaves, post-paid, 50c. each; third size, larger and very fine, by express, 75c. each; fourth size, grand Sago Palm, which is <i>splendid</i> for indoor use, and specimens about five inches in diameter, averaging six to seven leaves each, each leaf from fifteen inches to two feet long, by express, $2.50 each.

Note.—Plants of this last size are ordinarily listed at $5.00 each at the least.
Three Rare Aristolochias.

These three magnificent plants are exotic cousins of the hardy Dutchman's Pipe (Aristolochia silphi), but are entirely distinct in appearance and are among the most beautiful and curiously interesting of flowers, as a single specimen at the illustrations will convince anyone. They are easily adapted for universal cultivation, both North and South, either in the open ground as summer climbers, or in pots for window decoration, as they grow admirably and freely as Morning Glories, and their wonderful flowers never fail to excite the most unbounded admiration and curiosity. They are particularly effective and desirable vines for training up around porches and bay windows in warm, sunny situations.

Aristolochia Cymbifera.
(The Boat Flower.)

An elegant and rapid growing climber, and a most profuse bloomer. Flowers large, in shape somewhat like a Venetian Gondola—as shown by the cut—eight inches long, in color light green and creamy white beautifully veined with brown and dark purple, the throat velvety black. It is a most remarkable flower and attracts great attention when in bloom. Strong plants, 25c. each.

Aristolochia Elegans.
This magnificent climber, imported from Brazil, is a beautiful free flowering species of neat habit, its growth rapid and very dense. The elegant flowers, which are produced in the greatest profusion, even on small plants, are borne on long stalks and have a slightly veined tube which is suddenly bent upwards into a corol-date, cup-shaped flower of a rich dark purple, ornamented throughout with irregular banded markings of creamy white, and having a golden yellow eye surrounded by rich velvety purple. One of the handsomest flowers imaginable. Strong plants, 25c. each.

Aristolochia Ornithocephala.
The Bird Flower.—The flowers of this species are very large, about four inches long, and of a truly wonderful appearance. It may be described as having the head of a hawk with the beak of a heron, giving it a singular bird-like appearance that will delight anyone with a taste for the odd and curious. In color the flowers are red, purple, veined and marbled with gray and brown. The plant is a rapid grower and flowers freely. Strong plants, 25c. each.

This set of three grand climbers will be sent to any address for only 6c.

Little Gem Calla.

This is perhaps the greatest and most useful Novelty introduced for years. It is a perfect Calla, growing only six to eight inches in height and producing, in the greatest profusion, the most perfect and exquisite pure white flowers which are just of a suitable size for cut flower work. It grows very rapidly and a bulb will soon fill the pot, and when developed, looks exactly as shown in our cut. A specimen in a six inch pot, only eight inches tall and bearing perfect flowers is one of the loveliest and most striking and unique objects imaginable. It was awarded a Certificate of Merit by the Royal Horticultural Society of England in 1880, and introduced last year for the first time. The country is flooded with new and novel varieties, but which grow at least twice as large and tall and are inferior in every way, which are being sold as "Little Gem." Many responsible florists ignorantly purchased this spurious stock, and unknowingly sell it to their customers as the "Little Gem."

Our stock is guaranteed true to name, having been personally selected and forwarded to us by a member of our firm and if our customers could visit us we could show them the genuine and false growing side by side. Be wise and save money, vexation and disappointment by sending for the plant where there is no doubt as to its genuineness.

Fine, strong plants, only 25c. each.
Sanseviera, or Alligator Lily.

If a plant is wanted to grow anywhere, in or out of the sun, to stand draught, dust and heat, and always look fresh and healthy, then order this. It is a beautiful plant, splendidly adapted for the decoration of drawing rooms and halls, as it stands all manner of neglect except freezing— with impunity, even preserving its cheerful look when you have forgotten to water it for a month. The leaves grow to a length of three to four feet, and are beautifully striped and variegated with white on a green ground. The leaves do not fade and die but increase in number and size each year until, if allowed, it fills a large pot and forms a majestic decorative object. Price of strong plants, 20c. each.

Florida Rubber Tree.

(Ficus Aurea.)

This Rubber Tree, a native of extreme South Florida, is an entirely distinct species and a decorative plant of the greatest value. It quite equals in beauty the famous Rubber Plant, Ficus elastica, too popular and high-priced at the North, growing in exactly the same manner but having smaller leaves, three to four inches long, in shape oblong and obtuse at each end, of a thick leathery texture, and richest shining green with a reddish midrib. It is of very rapid growth, stands heat and dust with impunity, is a magnificent pot plant for decorative work in contrast with Palms or other plants, and will become very popular with all who give it a trial. Fine, perfectly shaped plants, 20c. each; larger and finer, 35c. each.

Arundo Donax Variegata.

A magnificent Bamboo-reed, as easy to grow as a Dahlia and quickly producing a splendid, oriental effect when standing singly on the lawn or in the garden. It succeeds perfectly in ordinary garden soil, but if manured heavily it will shoot up stout canes from 8 to 10 feet tall, clothed their entire length with long and broad leaves most beautifully striped with different shades of white and cream color. It is particularly fine and valuable for sub-tropical gardeners, but wherever it is grown it produces a peculiar scenic effect and invariably attracts attention. The canes can be used for fishing rods, for light props, rustic pipes, distaffs, baskets, etc. Every year the roots will grow larger and stronger, producing taller canes and more of them. If desired, it may be grown in a tub or good-sized box, with fine effect, and be removed to the cellar over winter. Heavily manured and plentifully supplied with water in dry seasons it will shortly form a strikingly beautiful object. It is perfectly hardy in the latitude of Washington, D. C., without protection, and also in New Jersey and on Long Island, N. Y., if manure, or litter of some sort, is heaped above the roots. Farther north, in late fall, cut off the canes and lift the clump of tuber-like roots, place them in a box of sand or soil and winter in a cellar or shed where there is not much frost. Fine mailing plants, 20c. each; strong large roots by express, 35c. each.

Pleroma Splendens.

A rare and exceedingly beautiful pot-shrub, flowering almost the entire year round and especially valuable for winter decoration. The plant grows in fine symmetrical shape, like a miniature tree, covered with beautiful leaves, which feel and look as if cut out of lovely green velvet, and bears in great profusion the most showy flowers, in size, larger than a silver dollar, and in color a rich, deep royal purple— a shade almost unknown among flowers. The plant is never too small to bloom, while good sized specimens present a display charming to behold. It may be treated as a pot plant the year round or planted out in the open ground during the summer like a Geranium. Nice plants, 2c. each.

Hibiscus Chrysanthha.

This beautiful flower is said to be a hybrid between the Hibiscus and Abutilon and it certainly combines some of the characteristics of both, having leaves like the Abutilon and flowers resembling in form those of some varieties of Hibiscus, while in its manner of growth it is more spreading than either. Flowers five or six inches across, flat or saucer-shaped, in color a clear, bright canary-yellow, with a brown-black center which greatly heightens the effect. The plants begin blooming when only three or four inches high, often bearing an expanded flower which is larger than the plant and pot combined, and blooms constantly whether in a pot in the window or bedded out in summer. It is exceedingly effective among the brilliant flowered Chinese varieties. Price, 3c. each.

ARUNDO DONAX VARIEGATA.

Have you been charged high rates by Express? We fully prepay all Express Charges under conditions outlined on Page 1. Don't fail to read them.
Datura Arborea.

This is also known as Angels Trumpet or Wedding Bell and is catalogued as Brugmansia, but the above is its correct name. It is a plant which it is impossible to adequately describe, as no pen can possibly convey a correct idea of its grandeur, beauty and fragrance. It grows in a fine, miniature tree form, and completely crowds itself with pure white, drooping, bell-shaped flowers a foot long, six or eight inches wide, of the most overpowering sweetness, and the same flowers opening for several days in succession. We have counted over 200 flowers open at one time on a plant, and they almost completely obscured the leaves and weighed the branches to the ground. The cut conveys but a poor idea of the appearance of the plant, and no idea of its wonderful blooming qualities. Should have a rich soil and be pruned into good shape. May be kept as a pot shrub the year round, or be bedded in the spring and wintered in a pit or cellar, or kept up for winter blooming. In Florida it may be set in the open ground permanently, and will attain a great size, sprouting up vigorously when the top is cut off by untimely frosts. Fine, thrifty plants, 15c. each.

Canna Flaccida.

A native Florida Canna with flowers so large and lovely that no varieties in cultivation can excel it in delicate beauty, not even the magnificent French Canna which have created such a sensation for the past few seasons. Its blossoms are from a rich golden yellow to a pale straw color, are over two inches in diameter the narrowest way and five or more inches the widest way. The petals are very delicate, with edges beautifully crimped, the blossom resembling the Iris flower in shape and appearance more than a Canna. The plant is dwarf in height—from two to four feet—but grows vigorously and blooms profusely all summer. It is especially valuable as a foreground in groups and beds of tall growing Cannas, Eleusins, etc. It seems content in any soil, but, like all Cannas, will amply repay liberal treatment. The roots should be wintered in a box of moist earth in the cellar, or may be kept up for winter flowering. Price of fine pot grown roots which will bloom this summer, 15c. each, 3 for 30c., 6 for $1.00.

Canna Star of '91.

This is universally acknowledged to be, without a single exception, the finest Canna ever offered to the public, and the fact that Mr. Wm. Falconer, the widely known gardener of Mr. Dana, editor of the New York Sun, pronounces it the grandest flowering Canna that he has ever grown or seen, is all the guarantee of its great value that is needed. It has four very valuable points in its favor: First, it is a very dwarf plant, not exceeding two or three feet in height in the open ground, and still less in pots. Second, it is a true ever-bloomer, not requiring a period of rest during the winter, but flowering throughout the year. Third, its flowers are of great size, borne in immense panicles, of a rich, glowing color, and very lasting. Fourth, unlike most other Cannas it does not wait to attain size before flowering, but as soon as planted it immediately sends up a flower stem followed by others in rapid succession, so it is a rare thing for it to ever be without flowers. The flowers are of the most intense fire scarlet color, banded with pure gold, and the panicle of flowers is often much larger than the plant itself, so our cut is not an exaggeration in the least.

Fine, strong plants, only 25c. each, 2 for 40c.

"Canna Flaccida is wonderful. I would not part with it for $25.00, if I could not get another."—Mrs. C. M. Barnwell, Mass.

"Canna Flaccida is the most handsome Canna I have ever grown. It will make a dwarf, habit the beautiful canary-colored flowers surpass in size those of the much lauded Canna Elenensis."—Mrs. Sue Thompson, Texas.
New Hardy Spider Lily.

(*Hymenocallis Galvestonensis.*)

A Spider Lily which may be planted out in gardens all over the North like a Freesia and prove equally as hardy, is a novelty indeed, and we are glad to welcome one. Such is the following species, and it is now possible to have clumps of this elegant and charming flower in the yard with no trouble after once setting it out. It has been subjected to the most rigid tests at the North, and has proved equally as hardy as the old Narcissus Pseudonarcissus. Bulbs planted late in the fall (too late to make any roots before winter set in) came through without any protection whatever. They bear an abundance of white flowers equally as beautiful and fragrant as the tender species, and the beauty of a clump of them established in a yard or border is better imagined than described. The flowers are pure white, exquisitely beautiful in form and delicately fragrant; produced in large umbels on tall stems, each umbel a whole bouquet in itself that will scent a whole yard or room.

Fine blooming bulbs, 15c. each, 3 for 50c., 5 for 80c.

Krum Yemense.

This new Crinum, lately discovered in Arabia and introduced into cultivation, is one of the most valuable of recent introductions and certainly one of the finest of all the known species of Crinum. Our cut conveys a fair idea of the general appearance of the plant, but no idea whatever of the great beauty of its flowers which are very large and produced in immense umbels. They are a divinely white, with yellow stripe and red patch, and the scent is deliciously fragrant, and droop gracefully. In addition to the great beauty of its flowers it is an everblooming, repeatedly producing new flowers on the same bulb several times in a season, whether grown in pots or in the open ground during summer. It is an exceptionally hardy sort which insures its successful cultivation under a variety of conditions.

“Grandolia,” or Crinum Augustum.

This may be truthfully said to be the stateliest and most magnificent Crinum known to cultivation, and for true beauty is unsurpassed. There is a specimen on our grounds, only three years planted, with leaves as tall as a man’s head, four to six inches wide and the ends gracefully drooped out and downward. Ordinarily this species produces an umbel of thirty or more flowers, larger than a half bushel measure, but an old bulb has produced an umbel so large that when carried in a covered buggy it completely hid the person in the seat. The buds are of a deep purplish-red color, and the flowers when in bloom are blood-red outside and a delicate satiny blush inside. The petals are broad and from six to eight inches long, making a flower of an immense size. It only remains to state that the flowers are deliciously fragrant and we have frequently described the grandest Crinum yet discovered. The bulbs bloom while quite small, and in a large pot or tub it makes a grand display. Fine, strong bulbs, by express, $3.00 each.

Christ-and-the-Apostles.

(*Crinum Scabrum.*)

When or by whom the above fanciful name was bestowed on this Crinum we cannot tell, but we learn it was given because the plant usually produces thirteen flowers to each umbel, one in the centre surrounded by the other eleven, representing Christ and the twelve apostles. It is an exceedingly choice and beautiful sort, of which the supply of bulbs is limited. We have been collecting and propagating it since it first came under our notice, until now we have the largest stock of it in America. It produces an abundance of pale green foliage with delicately crimped or curled margins, and usually two flower scapes at a time. The flowers are shaped much like those of the old Anemone Lily, but have a much longer tube, so that the outer row droops in a very graceful manner. The six broad petals are a pure, sparkling white with a light red stripe down the outside, and on the inside a faint, delicate peach-blow tint. It makes an exceedingly satisfactory pot-plant, being managed with perfect ease, and will certainly delight all who possess themselves of it.

Strong, flowering bulbs, $1.00 each.

Read on Page 1 the conditions under which we prepay all Express Charges to your door.
The Otaheite, or Dwarf Pot Orange.

This wonderful Orange is a regular little dwarf, growing no larger than a good specimen Geranium, and equally as easy to manage. Incredible as it may seem, it has produced flowers and ripened its fruit perfectly in a two-inch pot. Its beautiful blossoms are produced in the greatest abundance, are as fine and large as other Orange flowers, and possess the same delicious fragrance. The fruits are about half the size of ordinary oranges, with a flavor resembling the Mandarin. It is not unusual for the plant to produce a full crop of its exquisite flowers while yet full of its pretty fruits. A plant of remarkable beauty, and has received unestricted praise from every quarter. Fine mailing plants, large enough to bloom, 25c. each; $1 for 6.

"My Otaheite Orange at the present time (April 26) has on its branches 175 blossoms and oranges. Oh, it is just beautiful!"—Mrs. S. B. Powers, Conn.

"Among the desirable and little known plants for the window garden is the Otaheite Orange, a dwarf-growing Orange tree of remarkable beauty. It will flower and ripen its fruits perfectly in a two-inch pot. It is not rare to have these diminutive Orange trees bearing from twenty to thirty flowers, and a few ripe fruits at the same time. The fruits remained several months on our plant, which, after being shifted into a larger pot, again bloomed profusely, with a fair prospect of another crop of oranges."—Editorial from American Agriculturist.

"This dwarf shrub Orange is admirably adapted for pot culture. I got a good-sized plant last June, and set it in the ground at once. When taken out in September, the Pot. W. F. Massey, of the N. C. College of Agriculture, writes in the Orange and Garden:

"We have no doubt that the hedge plant of all others, for all parts of this country, has at last been found; and its adoption can only be one of time. * * This plant is a true Orange. Don't start and say nonsense, and that no Orange can be hardy enough for this purpose, for this question has been settled. The plant I refer to is the Citrus Trifoliata, called by some Limonia Trifoliata. * * The writer planted thirteen of these trees in the hills of Northern Maryland, in the spring of 1889, in a locality nearly 800 feet above tide water, but in a valley where frosts lay heavily. The following winter these little plants, which were seedlings out of four-inch pots, and had made long sappy shoots late in the autumn, which were upright when winter set in, were exposed to a temperature of 18° below zero and 4° below at noon, with a bright sunshine and snow on the ground. They were entirely unprotected during the whole of the spell, the coldest I ever knew, but were not injured in the least. These trees have never been protected, and are now in full bearing. * * Its advantages as a hedge plant are its natural dense habit of growth, and the abundance of its sharp thorns. It is naturally a dwarf tree, and will need but little trimming to keep it within bounds. It will never become a nuisance, like the so-called Osage Orange or Maclura, by sprouting from the roots. * * Every branch and twig is of a bright, glossy green, and in summer and winter it will make the most ornamental of hedges. * * We hail it as the most promising plant yet found to take the place of the miserable Osage Orange and gives us a real defensive hedge without plashing or tying to 'patented' wires, and at the same time a most ornamental fruit-producing hedge."
When used for hedging purposes, set the plants from 18 to 20 inches apart in a single row. Planted even farther apart, they will form a hedge which no animal can force, not even the famed "razor-back" hog of the South, to which the barbed wire fence offers no restraint. The first fall, after growth ceases, cut the plants back to a uniform height of one foot; the next fall to two feet, and so on, until four feet high.

Prices: Strong, young, thrifty mailing trees, 25c. each; 3 for 40c.; 6 for 75c.; 12 for $1.25; 100 for $5.00. Fine plants, 1½ to 2 feet tall, by express, 25c. each; 3 for 75c.; 6 for $1.25; 12 for $2.00.

Paw Paw, or Custard Apple.
(Asimina Triloba).

This is a low-growing tree, from fifteen to thirty feet in height, and of elegant appearance, quite hardy as far north as New York. It should not be confounded with the tender Anonas, offered in our Tropical and Semi-Tropical Fruit department, though it is closely related to them. It is a small-sized tree, having bright green leaves, and bearing an abundance of fruit from three to four inches long somewhat resembling a banana, yellowish, and when fully ripe of delicious flavor. The cut not only shows the fruit but also the very distinct appearance of the tree, which is entirely unlike that of any other hardy tree of Northern regions. Everybody should plant at least one of these trees.

Price, 25c. each.

Edible Oranges and Lemons Budded on Trifoliata Stock.

The large-fruited and large-growing Oranges and Lemons budded on the Trifoliata Orange, dwarfs them into lovely little bushes for pots or tubs; but they will be just as fruitful and floriferous, and bear just as large and fine-flavored fruit as the big trees here in Florida. These miniature trees loaded with full-sized fruits are exceedingly ornamental. They also begin blooming and bearing at a very early age. May be wintered in the cellar if desired, or kept up for bearing in February and March. We have a fine stock, budded to the choicest named Oranges and Lemons which we can supply at 50c. each.

Rhododendron Maximum.

Rose Bay, or Great Laurel.

A superb hardy shrub, or low tree, growing from ten to thirty feet in height, having dark green, thick, glossy evergreen leaves from four to ten inches long, the finest of all the species. Its large white blossoms, with a shade of pink and a spot of yellow or light red, appear profusely in large trusses in July, the latest of all the Rhododendrons—a quality which adds greatly to its value as an ornamental. If it never flowered it would still be well worth planting on account of its lovely waxy foliage, which is beautiful the year round, but in winter is particularly cheerful. Without doubt the noblest of all our native shrubs, and absolutely hardy in Maine and Vermont.

Price, 20c. each.

Do you want your plants sent by Express? We pay all Charges. See conditions on Page 1.
Choice Specialties in Flower Seeds.

UNDER this head we offer a selection of Choice Seeds of the most decided merit. Some of them are Novelties—but thoroughly tested and their desirability fully proven and established—while others are not entirely new but are so meritorious and desirable as to deserve more notice than we could give them in our regular list of seeds, which will be found further on in this Catalogue. We call particular attention to our Giant Combination Strain of Pansies, New Nameless Petunias, Extra Choice Balsams, New Striped Diasanthas, Tom Thumb Verbemas and Liliyputian Zinnias, which have created a sensation wherever grown. And our patrons will be equally surprised and delighted with our Superb Hybrid Glicinias and Tuborous Rooted Begonias, the new climbing plant Centrosema Virginiana, and Leviathan Scabiosa, while the marvelously painted Monkey Flowers (Mimulus) will prove a wondrous revelation to those who have never before seen them.

All our seeds are perfectly fresh and as good as the best ever grown and sent out.

Centrosema Virginiana.

"LOOK AT ME."

Many old and neglected plants are really valuable and often prove equally as satisfactory as those which are absolutely new to cultivation, and at the same time if the best in actual merit, are decidedly most desirable. Just such a plant is Centrosema Virginiana, known to botanists for many years but not generally introduced into the market until last year, under the name of Centrosema grandiflora.) It is a perennial vine of rare and exquisite beauty, perfectly hardy at the North, begins blooming early in June from seed sown in April, and bears in the greatest profusion inverted, pea-shaped flowers from 1½ to 2½ inches in diameter, and ranging in color from rose violet to a reddish purple, while the large buds and the back of the flowers are pure white, making it appear as if one plant bore many different colored flowers at one time. Occasionally plants produce pure white flowers, while others are broadly margined with a white feathering. The flowers are

Magnificent New Hybrid Mimulus.

Through hybridization a new race of Monkey Flowers have been produced which cast their parent varieties entirely into the shade. Not only have the flowers been increased in size but the richest coloring and markings have been obtained, ranging through velvety crimson, maroon, yellow, white and pink, spotted and blotched in the most beautiful manner, and many of them double, or "hose in hose," as shown in the cut. They make charming pot plants, and also do nicely bedded out in summer, standing the sun much better than their parents, though they all prefer a semi-shady, moist position. Seeds should be started in pots, pans or boxes. We have prepared a grand mixture from all of the choicest new Hybrids, and they will produce a magnificent display. Per packet 10c.
Some Extra Choice Strains of Double Balsams.

The Balsam is an old favorite and as indispensable in the garden as the Rose. We can hardly conceive of a garden without Balsams, and without them it would certainly be incomplete. No other annual has undergone a greater change in the hands of the Florist, and the improvement has been carried to such an extent that the flowers are quite as double and beautiful as Roses, and some of them equally as large. The same degree of perfection has as of been attained in the improvement of the colors of the flowers, until now they embrace a very wide range indeed. The varieties which we offer are undoubtedly the finest in cultivation and will delight all who plant them.

Snow Storm—A truly magnificent Balsam, producing flowers as large as a silver dollar, very double and solid and purest white. So double and perfect are they that they resemble Camellias, and are borne in such wonderful profusion that often 600 or more can be seen upon one plant at the same time. Ever since we first introduced this grand Balsam we have been receiving the most flattering testimonials in its favor from our customers who have grown it and are delighted with it. All agree that it is the purest white, the most double and perfect in form and the most gigantic in size of any white Balsam ever introduced. (See Fig. 3 in cut.) Per packet, 5c.

Preferred—A lovely new Balsam with flowers very large, double and perfect, white, tinted with delicate lavender. This tint is so delicate and shadow-like that it looks as though it was reflected on the flower from something else. The plant is of stout growth, with only a few branches, and the leaves are so small and few that the blossoms show to great advantage. The stems being at all times crowded with flowers, they are really like immense spikes of bloom. (See Fig. 1 in cut.) Per packet, 5c.

Carnation Flowered—A very beautiful class of Balsams, with fine large double flowers which are striped after the manner of Carnations, with rose, carmine, crimson, copper, scarlet, Pomegranate red, violet, Rose, etc., on pure white grounds, some with one color, others with two or more colors, and some are curiously mottled and striped. They are very beautiful and desirable and will certainly please all who grow them. (See Figs. 3 and 5 in cut.) Per packet, 5c.

Camellia Flowered—Flowers of great size and perfectly double resembling those of the Camellia Japonica, and almost as regular in shape. They are quite as double and equally as beautiful as Roses. (See Fig. 4 in cut.) Fourteen varieties mixed, per packet, 5c.

Fancy Spotted—These form a very distinct and beautiful class, and are justly regarded as among the most brilliant ornaments of the garden. They are very double and exceedingly beautiful. (See Fig. 6 in cut.) Fourteen different colors all spotted with white, mixed, per packet, 5c.

SPECIAL OFFER—Our packet each of the above five sorts for only 20c.

"My bed of Snow Storm Balsams is a charming sight, they are so purely beautiful, so truly double."—Mrs. G. W. Flanders, Mr.
Pansies,

Giant Combination Strain.

"The Pansies, the Pansies, their splendors behold,
Who gave to their velvet such wonderful dye?
As black as the midnight, as yellow as gold,
As fair as a Lilly, as blue as the skies.
As glowing as sunset, as bright as a gem,
The fabrics of Lyons are paltry to them."

Mrs. Jennie S. Perkins.

This magnificent strain of Pansies, which we introduced, met with just such an enthusiastic reception as we predicted for it. We could cover pages with the most flattering testimonials from customers who have given them a trial, and are more than delighted with them. This strain is a grand mixture made up from perfectly fresh seeds of all the choicest and most beautiful strains and distinct sorts. Goller or Biotted, Trinard, Deauville or Giant Pansies, Non Plus Ultra, Striped and Mottled, Snow Queen, Emperor William, King of the Blacks, Fire King, Lord Beaconsfield, Yellow Gem, and almost every other variety of merit are represented, so that for a small outlay of money you can have a splendid Pansy bed, representing a vast range of forms, sizes and colors, such as would cost several dollars if purchased from other catalogues, where the various colors and strains are listed separately and never offered in one grand mixture. Besides, no one catalogue offers as many distinct strains as are included in our Giant Combination Strain. The flowers are of the most enormous size, of great substance, keeping perfect for a remarkably long period, and presenting an array of gorgeous colors and exquisite blendings, markings and combinations, which is simply bewildering. In short no such an extensive combination of distinct strains, varieties and colors has ever before been merged into one grand mixture and offered to the public. We assure every one who tries these grand Pansies that they will be more than pleased with them.

From every point of the compass customers report that such magnificent Pansies were never before seen in their neighborhood. We are pleased at being able to offer the seeds at a very low price, bringing them within the reach of everybody. Get your friends and neighbors to send with you and all have a bed of these magnificent Pansies.

Per packet, 15c.; 2 packets for 25c., 5 packets for $1. Extra large packets, 25c. each, 3 packets for 60c., 6 packets for $1.00.

We particularly recommend the extra large packets, as they contain twice as many seeds, enough to plant a very large bed.

Every Pansy lover should compete for the prizes offered on the enclosed slip.

"I must say your Pansies are superb, sturdy and vigorous as to growth, and beautiful beyond description in their coloring. Their bright "faces" have been a source of delight to me all summer, as even midsummer's hottest days did not check their bloom. I can testify to the reliability of the seed, as I believe everyone came up—something unusual in my experience with Florists' seeds."—Mrs. Eula Farmer, Tenn.
Prize Winners and Prize Offers

One of our most pleasant experiences during the entire year is receiving the pressed Pansy and Petunia flowers sent to compete for the Prizes we offer, and reading the letters which accompany the same, and in which the writers relate to us in such a chatty, confidential manner their experiences in raising the flowers from our seeds. This season almost every competitor reports having had a drought of unusual severity to contend with, yet many of the flowers spread before us are of unusually large size, and embrace every color, shade, tint and variegation known to these charming classes of flowers, and are marvels of exquisite beauty.

Pansy Prize Winners.

THREE FIRST PRIZES:  
- MINNIE RICHTER, California.  
- MRS. CYRUS BARBER, New York.  
- MRS. C. M. BARDWELL, Massachusetts.

THREE SECOND PRIZES:  
- MARCIA H. HOWLETT, Wisconsin.  
- J. FERD. CRAMER, Utah.  
- MRS. EULA FARMER, Tennessee.

THREE THIRD PRIZES:  
- MRS. E. L. M. DAVIS, Missouri.  
- SARA REIFF, Pennsylvania.  
- MISS IDA MACON, Arkansas.

Petunia Prize Winners.

THREE FIRST PRIZES:  
- MRS. J. E. TUCKER, New York.  
- MRS. A. J. BROWN, Ohio.  
- MISS LILLY D. GREENE, Texas.

THREE SECOND PRIZES:  
- MRS. J. F. YOUNG, Iowa.  
- MRS. T. A. WHITE, Ontario, Can.  
- SARAH J. GRIFFITH, New Jersey.

THREE THIRD PRIZES:  
- J. P. LEES, Michigan.  
- MRS. GEO. HAMILTON, Ohio.  
- F. URBER, Maryland.  

[OVER.]
PRIZE OFFERS FOR THE SEASON OF 1894.

We offer the following prizes for the three largest Pansy and Petunia flowers raised during the season of 1894 from seeds of our Giant Combination Strain of Pansies and New Peerless Petunias, Single.

To the person sending us the largest Pansy or Petunia flower we will issue an order good for $15 worth of seeds, bulbs or plants from our catalogues; to the one sending the second largest, an order good for $10 worth; and the third largest, an order good for $5 worth. This makes six prizes—three for the first, second and third largest Pansy flowers, and the same for the Petunia flowers. The flowers must be carefully pressed, and, with the original packets the seeds were bought in, mailed to us by September 25th, with the name and full address of the sender.

SOME PANSY AND PETUNIA TESTIMONIALS.

My Pansy bed is simply grand and is greatly admired. There are scarcely two alike; all are beautiful, some immense.—Mrs. C. M. BARDWELL, Massachusetts.

I send you by this mail some of my pressed Petunias raised from your New Peerless seeds. They are the largest ever seen here, and such beautiful, rich colors, like velvet.—Mrs. J. F. YOUNG, Iowa.

My Pansies were the largest I ever saw, and the admiration of all my friends. I never saw so many distinct strains from one packet of seeds as from your Combination Strain. I think everybody ought to plant them.—MINNIE RICHTER, California.

I enclose one of my largest Petunias, raised from seed obtained from you last Spring. I think for an old garden and a dry Summer this is "immaculate." And the colors! The blossoms on this plant look as if they were full of imprisoned sunshine. The "Star" Canna ordered from you is blooming beautifully.—Mrs. J. E. TUCKER, New York.

Enclosed find Petunia and Pansy from your seed. They have proven to be very large and so lovely that I wish to compete for the premium. I never had such beautiful flowers as I have from the seeds and bulbs that I got from you. They are the wonder of the neighborhood and will gain you quite a number of customers. The Summer has been very dry and unfavorable, yet they have been so beautiful that I wonder what they would have been under more favorable circumstances. I had Pansy seed from four other florists, but yours were the finest.—Mrs. A. J. BROWN, Ohio.

Find enclosed the New Peerless Petunias raised from seeds purchased from you in the Spring of '93. They are the most beautiful Petunias ever grown in this part of the country. They are so beautifully veined and striped, and everybody is surprised at their great size, being grown so far north. There were a number of excursionists here from the County of Welland, who were more than surprised to see them so large. They said as large Petunias had never been grown down there where they are, so much farther South. They also asked where I got the seed, so I gave them your address.—Mrs. T. A. WHITE, Ontario, Can.
New Peerless Petunias.

These are also new introductions of ours, and have created an equal sensation with the Giant Combination Petunias. From every hand has come the report that no such Petunias were ever before seen in this country. This strain is most happily named, and is obtained direct from one of the greatest Petunia specialists in Europe who grows annually upwards of 20,000 of the plants in pots, solely for the purpose of artificial fertilization, and it is only with this obtained which are offered. The unsurpassed excellence of his strains has gained for them a world-wide reputation, and they as far surpass the ordinary cultivated Petunias as day surpasses night.

The colors of the rainbow are hardly more vivid; the sizes of some are small and delicate, while others are simply enormous; there are both double and single, some of them of the most beautiful shades of crimson, white, rose, maroon, etc., others blotched, striped, veined, bordered, marked and fringed in the most beautiful manner imaginable.

TYPES OF NEW PEERLESS PETUNIAS.

New Peerless Petunias, Single—No words can convey an adequate idea of the beauty of the flowers this superb and very showy strain will produce. They will be of the most symmetrical shape, and splendid and very attractive colors. A large percentage of the flowers will be striped, blotched and veined, while many will be most beautifully fringed. Per pkt. 10c., 3 pkts. for 25c.

New Peerless Petunias, Double—All the above and more can be said of this rare and beautiful strain. In addition to their charming colors (selfs, spotted, striped, blotched, veined, etc., 85 percent, or more of the flowers produced will be perfectly double. To produce this strain the flowers are fecundated with the most scrupulous care, so that much of this seed costs the grower not less than $2.00 per ounce. Per pkt. 25c., 3 pkts. for 75c.

SPECIAL OFFER One packet of each sort for 50c.

Tom Thumb Verbenas.

These exquisite little Verbenas must become very popular, particularly with those whose space for growing flowers in small. They are well named, being dwarf and compact, not exceeding six inches in height, and the branches are not over one-half the length of the old varieties. They form almost circular bushes about two feet in diameter, covered with flowers equally as fine as those of the old sorts, and of various beautiful colors. Per packet, 10c.
Superb New Hybrids.

The Gloxinia is one of the most lovely pot plants imaginable and can and should be grown by everybody. They grow naturally in much shaded situations—seeming to avoid the sun—and are therefore splendid for north windows, and will thrive finely on shelves and stands back from the window where most plants would refuse to grow at all. Through hybridization a race has been obtained which bears flowers of a gigantic size, and held nearly erect so that the border and throat, where the greatest beauty of the flower lies, are plainly visible. These hybrids are vastly improved in color as well as form, and the flowers are produced in much greater abundance than with the parents. The leaves of all are of a velvety texture and a deep, dark green, so that the plants are very ornamental in all stages of growth. The flowers are tubular and thinned, mottled and marked with the most delicate and rich colors imaginable. Crimson, scarlet, violet, rose, white, etc., form the ground colors, and these are tigered, spotted, veined and bordered with other colors and shades in a most fantastic and charming manner. They are extremely easy to grow. In April pot the bulbs in porous and well-enriched soil and keep them in a warm, semi-sunny position until the flowers appear, when if they are removed to a more shady location the colors will be richer. In watering avoid wetting the leaves and never allow the soil to become sodden. From November until March or April the bulbs should be kept dry in sand or sawdust, in a dry, warm place. One-third of the price usually charged for a single bulb will pay for a packet of our seeds from which anyone can raise several dollars worth of these superb bulbs.

Directions.—Use well-drained pots, pans or shallow boxes of very light, sandy soil which cannot bake; scatter the seeds—which are fine and dust-like—over the surface and dust over them the slightest covering of sifted leaf-mold, or simply cover with a slight covering of moss or a piece of flannel. Cover all with a pane of glass and keep constantly moist in a warm place until germination takes place, then remove to a semi-sunny, warm window. When the leaves are an inch long prick them out into small pots or shallow boxes, and if they are well attended to they will begin to bloom in three months from the time the seeds are sown. They may be brought forward very rapidly in a hot-bed. The exquisite velvety flowers will last in water, when cut, over two weeks.

The seeds which we offer are a superb mixture of all the newest and choicest hybrid strains, and for variety and brilliancy of color we believe they are unrivaled. It is such seeds as most florists would charge from 50 cents to $1.00 per packet for. Per packet, 10c., 2 packets for 25c., 5 packets for 50c.

Mrs. Mary C. Knapp writes: “From the one packet of your Superb New Hybrid Gloxinia seeds I have seventy-two young plants, and I know doubt there are more coming.”

Mrs. M. E. Ten Eick reports that from a packet of these seeds she has raised a quantity of plants which have produced some of the most exquisite flowers imaginable.
BORDER OF GRAND TUBEROUS-ROOTED BEGONIAS.

Grand Tuberous-Rooted Begonias.

The rare beauty of the Tuberous-Rooted Begonia, with its beautiful foliage and superb flowers of such brilliant colors, and many of them of such gigantic size, is acknowledged by every one who has seen or grown them. Heretofore they have been grown almost exclusively as pot plants in this country, and nothing could be finer for that purpose. But the past few seasons has marked an important era in the history of this noble flower, it having been demonstrated beyond a shadow of a doubt that these plants are perfectly adapted for bedding out, no other known plant for the purpose doing better or being half so showy. It is even confidently predicted that in a short time they will take the place of the Geranium, Coleus and many other of our popular bedding plants. Two years ago last February a New York florist sowed a great quantity of the seeds, growing the plants in shallow boxes until planting-out time in the spring, when he set out fully one acre in an open field. The results were far beyond the wildest anticipations and the display simply marvelous in spite of the fact that an unusually severe drought prevailed during the summer months. Raising the bulbs from seed is an exceedingly easy and really fascinating task, and can be done in any window. Procure a shallow box—a cigar box is just the thing; pierce holes through the bottom for drainage, fill nearly full of very sandy soil, if almost clear sand it is better. On this sow thinly the seeds, which are very fine, and cover slightly with sifted leaf mould, moss or flannel, and pane of glass as recommended for Gloxinia seeds. To water the seeds, set the box in a pan of warm water, and the soil will take it up like a sponge, and not disturb the seeds, as pouring water on the soil is liable to. When the plants have a second pair of leaves prick them into shallow boxes of good but sandy soil, setting them an inch apart each way. They will require one more shifting, set two inches apart each way, where they can remain until planted out in the open ground, which should be made very rich. The tubers are kept over winter in the same way as Gloxinias. We offer a superb mixture of seeds from the choicest French, English and German strains, whose superiority of form, size and color is unsurpassed. They will produce both double and single varieties, running through a vast range of colors and shades—many of the single varieties producing flowers from 3 to 5 inches across. They also make lovely pot plants for either the window or plaza. The seeds may be sown at any time from February until May, but the earlier the sooner the plants will begin flowering. Dormant tubers should never be planted in the open ground, but should first be well started in pots or boxes and then set out, after the ground becomes thoroughly warm and settled and all danger from frost has passed. Neglecting these points is the principal cause of all failures. Bulbs that can be grown from one packet of our seeds would cost several dollars to buy.

New Leviathan Scabiosa.

The old Scabious or Mourning Bride, an old and prime favorite in gardens, is totally eclipsed by this new giant flowered race. Many of the flowers measure from six to nine inches in circumference, and all are double clear to the centre, and exceedingly beautiful. The range of colors is a wide one, including pure white, golden yellow, lilac, dark purple, maroon, cherry red, purplish claret and brick red, with such combinations as white and lilac, black-purple and white, etc., they are very showy for garden decoration, and especially valuable for cutting purposes, having long stems. All colors mixed, per packet, 10c.
Papaver Nudicaule, or Iceland Poppy.

A superb, perfectly hardy biennial sort which should be most widely known. Seed sown in the open ground in the spring will make plants that bloom in the autumn, and which will live over winter, and then from the beginning of June to October they completely load themselves with their fragrant, elegant crushed satin-like flowers which are produced in never-ceasing succession, lasting for several days with out drooping or fading, proving very valuable for table and general decoration. It is one of the plants whose buds will open after they are cut. If taken off just before they are ready to bloom, and placed in water, they will open fully, remain in good condition for quite a week, the easy, crimped and curving lines of the petals giving the flowers an exceedingly graceful form. The colors are bright yellow, scarlet, pure white and gold-tinted crimson, and a vase of them is very ornamental. They appear best in the garden when a considerable number of the plants are set close together, forming a mass. Seed, all colors mixed. Per packet, 5c.

Fire-on-the-Mountain.

(Euphorbia Heterophylla.)

This splendid half-hardy annual, is undoubtedly one of the very finest acquisitions that has been introduced for years, and has already become immensely popular.

The plants grow three to four feet tall, very branching, with very deep green and glossy fiddle-shaped leaves. The leaves are at first all green, but about mid-season when the heads appear at the end of every branch, and the bases of all the leaves surrounding these heads are of the most brilliant vermilion scarlet, so that the whole plant is a perfect blaze of color, entirely unlike anything else we know of. The effect of a mass, or bed, of these plants is simply indescribable, and the display is kept up until frost. It is also a grand pot plant for house culture, seeds sown in early summer making plants that will continue to bear their showy scarlet and green leaves all winter. South of the latitude of New York, seeds may be sown in the open ground in May, but farther north it is best to start the seeds early in the house for the earlier they are started the sooner will the colored leaves appear. Seeds, per packet, 5c.

Snow-on-the-Mountain.

(Euphorbia Variegata.)

This plant, which is not new, but is very desirable, and is not as frequently seen in cultivation as it should be, produces large heads of green leaves bordered with pure white, presenting a striking and beautiful appearance. A most beautiful and striking effect can be produced by planting a bed of Fire-on-the-Mountain, which grows from three to four feet tall, and edging it with Snow-on-the-Mountain, which grows from only eighteen inches to two feet tall. The cut conveys a faint idea of the appearance of such a bed.

Per packet, 5c.

"I have a big bed of Fire-on-the-Mountain, and scarlet bracts have been appearing ever since the first of August." 

The New Dwarf or Lilliputian Zinnias.

These are perfect little jewels, and must prove as popular as the Tom Thumb Verbena. They form compact little bushes, not over 2 inches high by about 1 inches in diameter, and bear the most abundant profusion of perfectly double flowers of a great diversity of colors. They are charming for pots, beds or borders, and will certainly delight all who give them a trial. Per packet, 10c.

Dianthus, New Striped.

In this beautiful strain we have a formidable rival of the Carnation, being freer bloomers and the colors most varied and pretty, and adapted as pot plants for winter blooming until frozen up in the fall. They are perfectly hardy, thriving over winter in the open ground and blooming as well the second year as the first. The flowers are large and double, crimson, rose, white, etc., all beautifully striped and many of them elegantly fringed. Per packet, 5c.

Japanese Wineberry.

This magnificent fruit is acknowledged to be one of the most valuable fruit novelties ever introduced. It is a Japanese species of the Raspberry, a strong, vigorous grower, attaining the height of 4 to 6 feet, perfectly hardy and thriving luxuriously both north and south. The fruit is borne in large clusters and in great quantities, often 75 to 100 berries in a bunch, and is entirely different from that of any other berry, being very sprightly and juicy with a delicate and luscious flavor peculiar to it. In color they are of the brightest, light, glossy scarlet, or sherry wine color, making them the most beautiful table berry in cultivation. Covered or preserved the Wineberry retains its fresh, sprightly flavor, and it makes the most beautiful and delicious jelly, syrup and wine imaginable. Until ripe the berries are enclosed in a "burr," as shown in the cut, and these "burr" with their stems, and also the young shoots and branches, are covered with a heavy reddish moss like a Moss Rose bud, giving the plant a most unique and beautiful appearance.

To Grow From Seed. The Wineberry may be easily grown from seed if treated according to the following directions, and several dollars' worth of plants be raised from a single packet. Soak the seeds quite thickly in a shallow box of soil, cover lightly, and let freeze if convenient; if not then soak the seeds in warm water for several hours before sowing. Cover the surface of the soil with damp moss, or litter of some sort, which remove as soon as the seed commence to germinate. Transplant the tiny seedlings to other boxes and then to the open ground as soon as large enough. If the soil is kept constantly moist the seeds will continue germinating for weeks until the last one has sprouted. The plants will fruit abundantly the second season. Fresh seed, per packet, 25c., 3 packets for 75c.

SPECIAL OFFER.—There are 15 special Seed Specialties amount at Catalog price to $1.50. We will send the whole collection, post-paid, to any address for only $1.50. This is a remarkable offer, and one which our patrons should be sure to avail themselves of.
A Few Very Choice Ferns.

Everybody who cultivates flowers should grow Ferns, both in the garden and in the house. They flourish to perfection in moist, shady positions, where many other plants utterly refuse to grow. A soil composed of equal parts of loam and leaf mold, with a liberal addition of sand, suits them admirably. When they are left in open ground over winter, it is best to place a covering of fallen leaves over them, held down by brush or pieces of board. They are like Palms in the respect that they grow better as they grow older. Well established specimens are exceedingly decorative and possess an air of gracefulness which no other foliage plant presents. Many of the following varieties are very rare and high-priced at the North, or are not catalogued at all.

Adiantum Cuneatum—One of the most beautiful of all the Maidenhair Ferns, and the one most popular and most generally grown by florists for decorations. It is a superb pot Fern. 25c. each.

Asplenium Eberium—One of the most delicate and graceful of our native Ferns. Perfectly hardy everywhere but beautiful for pot culture in winter. Stalks purple-black and shining; fronds 6 to 18 inches tall and three-fourths to one and one-half inches broad. It is particularly desirable for pot culture, and with its delicate, narrow fronds is a strong rival of the beautiful Sword Fern. It is sure to please everybody with its great beauty. 12c. each, or 8 for $1.00.

Blechnum Serratum—A very beautiful and stately Fern, found in South Florida and the tropics. Fronds 1 to 3 feet tall and 6 to 9 inches broad. The new growth is of a rich wine color, turning green with age. Rare and choice and a fine decorative species. 75c. each.

Lygodium Scandens—The beautiful Japanese Climbing Fern; as easy to grow as Ivy or Smilax. 35c. each.

Nephrolepis Exaltata—The beautiful Sword Fern of choice conservatory collections, often grown in wire baskets of damp moss and soil. In well-grown specimens the fronds attain a length of 6 or 7 feet, but only 1 to 3 inches wide, and like plumes areching over in every direction in a most graceful manner. It is a very fine plant for hanging pots. A single plant set in a good sized pot will immediately begin to grow and send out runners, soon filling the pot with a mass of its airy green plumes. It will grow in a shady corner away from the sunlight where most plants would perish. No other plant is more absolutely sure to grow thinly and please everyone. Fine pot-grown plants, 75c. each, 3 for $1.00, 5 for $1.50.

Osmunda Regalis—The Royal or Flowering Fern. Hardy everywhere and one of the very best of the large hardy Ferns. Fronds from 2 to 6 feet tall and 1 foot or more broad. 10c. each, 3 for $1.00.

Polypodium Lacerum—A half-hardy species growing in dense masses on the bark of oaks, hickories, etc., its fronds curling up in a dry time like the Resurrection Plant of Mexico, and opening whenever it rains. It is best grown on top of a pot of soil, as then the fronds remain expanded longer. The fronds are only from 2 to 4 inches long and 1 to 1½ inches broad, just the thing for the background of a buttonhole bouquet. Perfectly hardy and contented in the open ground at the North, in common garden soil in a shady nook, if given a good mulching of leaves in winter. 12c. each, large clumps, 35c.

Polypodium Convolutum—A South Florida Fern of great beauty, somewhat resembling the Sword Fern. Fronds 1 to 2 feet tall and 2 to 6 inches broad; very symmetrical in outline and most pleasing in every way. A choice sort. 75c. each.

Selaginella.

These curious and delicately beautiful plants should always be grown with Ferns, and they require about the same treatment. Many of the species are remarkable for the extreme beauty and delicacy of their fronds which, when well grown, nothing can exceed. Some are crest with large, spreading Fern-like branches, invaluable in cut-flower work; while others are prostrate and creeping, forming an excellent ground work for Ferneries. We can supply several very handsome species at 35c. each, or four, all different and very choice, for only 50c.
Orchids for Everybody.

Orchids are a highly interesting class of plants, but most sorts are very tender and must be grown in great heat and moisture, in specially constructed glass houses, and all are very costly, coming within the reach of the wealthy only. But the two Florida species we offer are very hardy, standing quite severe frosts, and will thrive anywhere that a Geranium will. They grow on the trunks and branches of trees, instead of in soil, and all they require is to be fastened onto a rough block of wood or bark, and be dipped into water frequently. Very rustic and curious affairs can be formed by growing them on forked branches, miniature stumps, etc. We have collected them in such quantities as to be able to place them at a price within the reach of everybody.

Epidendrum Venosum, or Butterfly Orchid.

This exceedingly beautiful Orchid is immensely superior in beauty to many a $5.00 species. It was quite unknown at the North until we introduced it. Now immense quantities are being shipped to meet the demand, and Northern florists are cataloging it at just double our price. The plant is composed of a mass of green bulbs and stiff, thick, waxy leaves. In summer it produces long spikes of showy flowers in inch or more in diameter, of beautiful shades of pink and greenish chocolate color, changing with size to rich yellow and chocolate. May be grown in pots of peat, moss and charcoal mixed, as well as on wood. Nice plants, 25c. each; or whole blocks, ready to hang up, as shown in the illustration, 35c. each. Very fine, large clumps (unblocked) 35c. each.

Epidendrum Conopseum.

Another native sort, equally hardy, yet pretty, and grows under the same conditions. It does not have the green bulbs, and both leaves and flowers are smaller. Flowers greenish purple and produced in great profusion, a good sized clump in full bloom presenting a very beautiful appearance. Nice plants, 15c. each, The same blocked, ready to hang up, 35c. each. Very fine, large clumps (unblocked), 35c. each.

SPECIAL OFFER.—We will send a nice plant of each of these Orchids, postpaid, for only 25c., or one of each nicely blocked for 55c., or a fine large clump of each (unblocked) for only 40c.

Air Plants, or Tillandsias.

Although these do not belong to the Orchid Family, still they grow in just the same manner and make fine companion plants, so we offer them here. They can be grown in wire baskets of moss, or be wired on a block or forked limb, and hung up by cords. All they need is a good wetting and a little water poured into them occasionally. They make the most unique ornaments imaginable, and never fail to excite the curiosity of all beholders. They also do finely in a north window, where so few plants will thrive.

Tillandsia Utriculata, or Pineapple Air Plant.

One of the largest species, bearing a striking resemblance to a Pineapple plant, minus the fruit. In full grown specimens the leaves are 2 inches or more wide, 2 or 3 feet long, and beautifully recurved. Fine plants, 15c. each; extra large and fine, 25c. each.

Tillandsia Bracteata.

Another large-growing sort of great beauty. Leaves grayish green, with a purplish hue, and quite upright instead of recurved, giving it a very distinct appearance. Flower stalks and bracts brilliant crimson and flowers purple, making a very showy appearance and remaining beautiful for weeks. Price 15c. each; extra large fine plants, 25c. each.

Spanish Moss.

The long, graceful, silvery-gray festoons of this beautiful Air Plant, Tillandsia Utriculata, erroneously called a moss, hang like long streamers from the limbs of the trees, producing an indescribably beautiful effect as it waves back and forth in every passing breeze. In the North it can be used with the most charming effect for draping over picture frames and rustic work, in drawing rooms and for decorating Christmas trees and booths at church fairs, etc. It remains fresh and beautiful for months, and if occasionally taken down and thoroughly wet will remain fresh and growing for an indefinite period. The longest and most perfect strands, 25c. per 5.
Aquatic and Bog Plants.

FEW are aware of the amount of enjoyment to be derived from the cultivation of this class of plants which are easily grown anywhere. Tubs, artificial pools made of stones, brick or cement, fountain basins or natural bodies of water may be used for the purpose, and after planting about all the care the plants require is to see that the supply of water is constant. The soil may be either good, rich loam and decayed cow or stable manure in equal parts, or rich muck or manure. Tubs should be set in the warmest, sunniest part of the yard; and they may be wintered in the cellar, or any other situation where the soil will not be likely to freeze.

Red, White and Blue Everblooming Water Lilies.

The growth of these three beautiful African Water Lilies is so wonderful and rapid that seeds sown in February or March will make nice little plants by June, and if planted out then will begin blooming in July and continue to produce flowers every day until frozen up in the fall. They are as easily grown from seeds, which are about the size of Poppy seeds, as are Balsams or Asters, and are best treated as annuals.

To Grow Them from Seeds.—In February or March take old tea-cups and fill them about two-thirds full with fine, rich garden soil, press it down firm and scatter the seeds on the surface, half a packet or a full packet to each cup, covering them to a depth of an eighth or quarter of an inch with clean sand. Fill up carefully with water, so as not to disturb the seeds, and place them where they will keep at a temperature of 70 or 81 degrees until they germinate, which will be from six to fifteen days. Those having no greenhouse can start them near the stove or on the mantel, moving them to a warm, sunny window as soon as the plants are well up. They should be watched carefully to see that all the water does not evaporate from the cups. After the plants have made leaves a quarter of an inch across, and are large enough to handle, transplant to two-inch pots, or other cups, which have been newly filled with soil composed of old, thoroughly decayed stable manure and garden soil in about equal parts. Set one plant to each pot or cup, put the soil down firm and set them in a pan of water deep enough to cover the plants about an inch. They can be kept in a greenhouse, hot-bed or warm, sunny window in the house until time to plant out in the tubs. Sometimes after the plants have been up a week or two they seem to stop growing for a time, and it is at this stage that they should be transplanted the first time. Transplanting causes them to start into growth again. If they stop growing at any other time it is an indication that they need to be shifted to a larger pot or richer soil, or perhaps the water is not warm enough. If the largest leaves have three to five inches across by the first of June, they are large enough for flowering in July. Do not put them in the open air until the weather has become quite warm, but they may be planted out several weeks after June.

The Blue Zanzibar Water Lily

Plants raised from seeds produced by this magnificently varied species will yield flowers varying from a light to a very dark, deep blue; some will be light sky-blue, just the shade of the flower of South Africa Plancius, others a rich deep azure blue, becoming lighter in a day or two, while others may be of a shade of blue so deep that it is not unsurprisingly called purple. This form is called "Royal Purple Water Lily," and retails as high as $10 per root. The stamens of all are bright golden yellow, tipped with the same shade of blue as the petals. The flowers open at about 7 A.M. and close about 4 P.M., each flower opening four days in succession, and each is a most delightful Opponax-like odor which is wafted out like a breeze.

The Red Zanzibar Water Lily

This is a superb and very rare variety of the Blue, and like it in every respect except in color, which varies from rich pink to deep rose, almost crimson in some specimens, yellow stamens tipped with the same shade of red as the petals. The two varieties make grand companions, and should be grown side by side by everybody who loves rare and beautiful flowers. The plants are never without flowers, from one to three or more opening every morning. Seeds, 10c. per packet, or one packet of each for only 15c.

The White Night-Blooming Water Lily.

(Nymphaea Dentata.)

This grand species, from Sierra Leone, unlike the Zanzibar variety, opens its flowers at about 8 o'clock at night, remaining expanded until the next day. They are pure white with petals expanded horizontally so that the flowers are perfectly flat like a star, thus differing from all other varieties. It possesses a most peculiar and agreeable odor, which has been likened to the most pleasant scents of an apothecary's shop, and its leaves are a very fine green, rather glossy or greasy in appearance. Tubs should be set in a pan of water deep enough, while if given plenty of room and very rich soil it will produce flowers fully twelve inches from tip to tip of petals, and leaves twenty-five inches in diameter. The seeds require a longer time to germinate than the others, but they are just as easy to raise. Seeds, 10c. per packet.

SPECIAL OFFER.—These three beautiful Water Lilies very happily represent our National Colors, "the Red, White and Blue," and in order that everyone may grow and enjoy them, we will send one packet of each of the three sorts for only 90c.

"My Water Lilies are just splendid. The Red and Blue Zanzibars have bloomed every day since the First of July besides my pink Lotus blooms every evening."—Mrs. J. E. Carlson, Ten.

We not only send goods by Mail, postpaid, but also send them by Express, the Charges fully prepaid, under conditions stated on Page 1. Be sure to read them carefully.
Hardy Water Lilies, or Nymphaeas.

The following species are perfectly hardy everywhere. We do not mean that the roots will stand actual freezing, but in the soil beneath the water, where the frost cannot reach them, they are safe, no matter how thick the ice forms on the surface of the water. Once established in a pond, lake or any still body of water, they will spread from year to year and furnish quantities of their exquisite flowers. They can also be grown with perfect success in ordinary tubs in the yard, and bloom all summer. In the fall pour off nearly all the water and remove to the cellar for the winter. In tubs they should have the same soil as recommended for the preceding varieties. In planting the roots do not tie them to a stone and sink them, as recommended by many, but push the roots carefully into the mud after which they will take care of themselves, and flower beautifully every summer.

Nymphaeas Odorata.

Our native Water, or Pond Lily, the praises of which can never be too highly sung. Its lovely white and deliciously fragrant flowers appear at an advantage beside the most costly exotics. Where the mud is very rich it will produce flowers six inches and leaves thirteen inches across. Extra fine roots, 20c. each, 3 for 50c.

Nymphaea Odorata Minor.

A dwarf variety of the above, possessing the same qualities of hardiness and fragrance, but producing flowers only one and a half or two inches across, white, tinted with pink on the outside. The leaves are also correspondingly small. One of the most perfect little gems imaginable. Price, 20 cents each, 3 for 50 cents.

Nymphaea Odorata Gigantea.

This is a gigantic form of the common White Water Lily which we discovered in this state. We have measured leaves of it which were 22 inches in diameter, and flowers eight inches across. The leaves are very thick and heavy and have their edges very curiously ruffled, and in some instances turned up, forming a rim after the manner of the wonderful Victoria Regia. Flowers fragrant, pure white with a golden-yellow center, and of a decussate cup shape, giving it a very distinct appearance. It begins to flower very early in the spring and continues to bloom profusely until frosts. Growing with the ordinary form of Nymphaea odorata it looks like a giant among pignics, and is undoubtedly the finest hardy Water Lily ever introduced. Although a novelty of great value, we have the roots in such quantities as to be able to offer it at an exceedingly low price. Fine roots 15c. each, 3 for 40c., 5 for 75c., 12 for $1.50.

Nymphaea Flava.

A genuine yellow Water Lily, native of Florida, and not found in any other part of the world. Its leaves and flowers are a little smaller than those of the common Water Lily. Leaves beautifully variegated with brown; flowers bright golden yellow and deliciously scented, something like Locust-tree blossoms, but more delicate. It is perfectly hardy at the North, but should have as warm a position as possible during the summer. It is best grown in a tub, wintered in a cellar or other warm situation and started into growth as early as possible in the spring. A glass sash placed over the top of the tub will hasten its growth and protect against the cold of early spring. We are glad to offer it to our customers at a much lower price than it has ever been offered before. Price 15 cents each, 3 for 40 cents, 6 for 75 cents, 12 for $1.25.

Special Offer. We will send a root of each of the above five Water Lilies, amounting to $1.00, for only 75 cents.
Lotus, or Nelumbium.

This class of Water Lilies is strikingly different from the Nupharas. The greater part of the leaves, and the immense flowers, are borne high above the water, presenting a most striking and pictorial appearance. The flowers are followed by large and most curios seed pods resembling a "rose" or "sprinkler" of a watering pot, containing large acorn-like seeds the ends of which show through the holes. The seed germinates readily if a hole is filled through the shell to the kernel, but not into it. The plants must have a heavy soil, as they will not thrive in one of a light, peaty nature. If the soil is prepared, a quantity of clay mixed with it will give the required heaviness.

Egyptian Lotus.

(Nelumbium speciosum.)

The wonderful "Sacred Lotus," so famed in prose and poetry. One of the most tropical appearing plants in cultivation, but equally as hardy as our common Water Lily, though coming from a tropical region. In rich soil it will produce leaves thirty inches across on foot-stalks five to six feet in length, and flower stalks five to seven feet tall. The first day the flowers appear like giantic Tea Rose buds of a bright rose color. The second day they open like an immense Tulip, the base of the petals being creamy white, most beautifully and delicately shaded off toward the end into bright pink. They are delightfully fragrant, and in the last stages of their development measure from ten to thirteen inches from tip to tip of petals. Some years ago a single root was planted in a secluded corner of a mill-pond in New Jersey, where the water was from one to two feet deep. Now it covers from three-quarters of an acre to an acre, a solid mass, the leaves standing from three to six feet above the water, completely hiding the tallest man from view when walking through the mass of foliage. In August, 500 of the beautifully shaded pink flowers can be seen open at one time. It grows readily and rapidly from the seed, and blooms finely in a tub; but the larger the tub the better the results. We are glad to be able to offer roots at the very low price of 10c. each.

American Lotus.

(Nelumbium latifolium.)

A native of this country but extremely rare. It is perfectly hardy and flourishes under the same conditions as the Egyptian Lotus, from which it hardly differs except in the color of the flowers, being a rich sulphur yellow, as large as a quart bowl and having a strong fragrance entirely unlike that of a Nyp har. A large patch of them, with hundreds of buds and flowers, is a sight never to be forgotten. Price of live roots, 10c. each. Fresh seeds, 10c. per packet.

"Last year I had a tub each of Nelumbium speciosum and Latifolium, and lots of blossoms. They were beauties."—Mrs. B. Pinkney, Kansas.
The Wonderful Water Hyacinth.

This is one of the most remarkably curious and beautiful plants we have ever grown. Instead of growing in soil it floats on the water, which it is enabled to do by means of its curiously inflated stem stalks, which resemble the seed of a globular balloon filled with air. A large mass of feathery blue roots grow downward, their ends entering the soil. It forms a lovely rosette of its curious, shining green leaves, and throws up spikes of the most exquisite flowers imaginable, resembling in form a spike of Hyacinth bloom, but as beautiful as many of the choicest and most costly Orchids. Each flower is as large or larger than a silver dollar, in color a beautiful soft lilac, sparkling as if covered with diamond dust. The upper petal, which is the largest, has a large metallic blue blotch in the center, and in the center of that a small deep golden-yellow spot. Can be grown in the open air in summer and in the window in winter, in anything which will hold water. In the window the most beautiful effect is produced by using a glass vessel of some sort, with shells and white sand so arranged in the bottom as to conceal a small amount of soil. In the summer the very best results are obtained in the following manner: As soon as danger of frost is past set a tub in the sunniest spot in the yard, put two or three inches of soil in the bottom, cover with an inch or two of sand, fill with water and drop the plant in. Keep the tub full of water and the hotter the sun and weather the more luxuriantly it will grow and the more profusely it will bloom. Of its plant and flowers conveys but an imperfect idea of their combined oddity and beauty. It created great sensation in Europe, where it has received unstinted praise, and cannot fail to delight everybody who gives it a trial. Fine plants 15c. each; 3 for 35c., 6 for 60c.

Water Lettuce.

(Pistia Stratiotes.)

A Florida plant of great beauty; a genuine curiosity and a fine companion plant for the Water Hyacinth growing just the same manner. It forms a rosette about six inches across, composed of the most exquisite leaves which are ribbed and feel and look as if cut out of greenish yellow velvet, sprinkled with diamond dust. Its beauty and oddity can be appreciated only by being seen. Price, 15c. each.

Venus’ Fly Trap.

(Dionaea Muscipula.)

Our cut gives a good idea of this most strange of all strange and curious plants. As shown, its leaves are furnished at the ends with a curious trap-like arrangement, the inner surface of which is covered with hair-like sensitive organs so that the instant an insect lights upon them they instantly close up and he is held a prisoner until dead. It is one of the so-called "carniverous plants," which are believed to feed upon the insects they capture. It is a highly interesting plant, and produces a spike of beautiful white flowers. Is easily cultivated as a window plant, if given an abundance of water which should always stand in the saucer; it also likes plenty of sun and muck or peaty soil, and does better if a glass tumblor is turned over it, which should be lifted occasionally and the moisture wiped from the inside. It is extremely rare, being found in but one place in the world. Price, 15c. each; 3 for 40c.

The Fairy Water Lily.

(Limnanthemum Trachyspermum.)

Leaves strikingly like a Water Lily, but of a yellowish color, with darker veins, dark purple underneath and curiously rough and pitted. Its flowers which are produced freely the year round, are white with a yellow center like miniature Water Lilies, and curiously borne on the same stem which bears the leaves. Will grow in either deep or shallow water, and is a charming plant for the aquarium. Our cut gives a very poor idea of what a pretty thing it is. Nice plants, 15c. each; 3 for 25c.
Pitcher Plants, or Sarracenias.

A highly ornamental and interesting class of plants belonging to the same order as the Fly Trap, and flourishing under the same conditions. All are natives of bogs or swamps, where the spongy, peat soil never becomes dry. A suitable soil is prepared by using Sphagnum moss, leaf mould and sand, cutting the moss up fine with a pair of scissors, and mixing all together. In this pot the plants, kept always moist and give but little sun. There should be plenty of drainage material in the bottom of the pots, though water may be kept standing in the saucers. During the winter a little less water should be given, but never allow the soil to become actually dry. They have hollow pitcher or trumpet-shaped leaves, in which water should always be kept. All of the following are catalogued in the North at from 3c. to $2.50 each. Their large yellow or purple flowers are highly ornamental and odd.

Sarracenia Flava, or Trumpets. This is the largest of all, its evert trumpet-shaped leaves frequently growing three feet tall. They are yellowish green, with a curious over-arching hood, reticulated with purple veins. Flowers yellow and very large, four to five inches across. 3c. each.

Sarracenia Varieglata. Pitchers from twelve to eighteen inches high, and very curiously hooded at the top, these hoods being beautifully spotted with white and reticulated with purple veins within. Flowers yellow and two inches wide. A very ornamental sort, and one of the very best. 3c. each.

Sarracenia Purpurea. A native of Northern bogs and perfectly hardy. Its pitchers are quite different from the foregoing sorts, of a deep reddish-purple color and beautifully veined; flowers purple. It is well worthy of a place in every garden. 1.5c. each.

Sarracenia Pfitzneriana. A dwarf sort with leaves two to four inches long, the ends shaped like a parrot’s beak, marked with white spots and reticulated with purple veins. Very distinct. 1c. each.

Sarracenia Drummondii Alba. An exceedingly beautiful and highly prized sort and so rare that we were requested to furnish specimens of it to the Botanic Garden at Cambridge, Mass. The upper portion of the crest, trumpet-shaped pitchers pure white, variegated with reticulated purple veins. The pitchers grow two feet high and its highly colored flowers are three inches across. 3c. each.

Thalia Divaricata.

We are not aware that the Thalias have ever been offered by Northern florists. They are appreciated in Europe where they are used in sub-tropical bedding with grand effect, but in America they are practically unknown. This species is a native of Florida and is a magnificent ornamental leaved plant deserving of extensive cultivation. It forms large clumps, as shown in the cut, sometimes reaching a height of ten feet, surrounded by panied spikes of small purple flowers. We saw it growing on the grounds of a customer in New York, and measured one clump which was over 6 feet tall with leaves 18 inches wide by 2 feet and 1 inch long. In general appearance it resembles the Canna, to which it is closely related, but is much more tropical looking. It will grow on ordinary soil, or in shallow water (like the Cat-tail), and may be treated in every respect like the Canna. The richer the soil and the more water it has the more luxuriantly will it grow. It is a very desirable plant for growing with aquatics, and for the centers of beds of Cannas and foliage plants, or as a tub plant for the lawn. Fine, strong roots. 3c. each.

Thalia Dealbata.

This is quite distinct from the above, being smaller and more slender in all its parts. The leaves, too, are a different shade of green, edged with a beautiful carmine line and dusted all over with a minute white powder. The flower stems run up very tall and slim, like a whalebone whip, bearing spikes of various purple flowers. Perfectly hardy in all the Southern States as far North, at least, as the Carolinas and Arkansas. A fine companion for the above and requires the same treatment. Strong roots. 3c. each.

SPECIAL OFFER. We will send a strong root of each of these beautiful Thalias for only 5c.
Choice Flowering Bulbs and Tubers.

Cyclamen Persicum.

A lovely winter blooming bulbous plant, with thick, dark green leaves, which are held or embroidered with silvery white in a beautiful manner. Its exquisite flowers are produced in great profusion, are held well above the leaves and each flower remains perfect for a very long time, so that it is not unusual for a strong, thrifty bulb to hold from a dozen to thirty or forty open flowers at one time. Some have pure white flowers, others white with pink or crimson centers, and some all pink or crimson. It is never without a profusion of flowers during its growing period, which extends from early fall until May or June. From the latter period until August or September it should have a rest, by setting in some half shady, out of the way place, and watering occasionally just enough to keep the soil from becoming dry. It is a plant sure to become a great favorite with all who give it a trial. Fine plants from three inch pots, ready to flower, 20c. each, 2 for 35c., 3 or 50c.

Spotted Calla.

The leaves of this beautiful Calla are very sharp pointed, deep green and thickly spotted with pure white, as shown in the cut. Unlike the common Calla, it is strictly a summer plant, its foliage dying away in the fall and the bulb resting like a potato during the winter. It may be grown in a pot, or planted directly in the open ground where it will flourish finely and bloom profusely as it does not require an abundance of water like the common sort. Its flowers are rather small, exquisitely formed and particularly fine for cutting and wearing. While it grows freely in any decent soil, if it is given a cool, rich, shallow soil, and copiously watered whenever dry, it will produce results well worthy of the extra attention. Fine flowering bulbs, 35c. each, 3 for 50c.

Calla Nana Compacta.

This rare and desirable plant is a dwarf form of the common Calla Lily, and is very desirable for cultivation when space is too limited to accommodate the rank growth of the common sort. It rarely exceeds eighteen inches in height, flowers most abundantly, the flowers being not more than half the size of those of the common Calla, and therefore much more appropriate to use in bouquets. It is a very superior house plant, occupying but little room and easy to handle. It must not be confounded with the Little Gem Calla, offered on page 4, which does not grow over one-half as tall.

Price, 35c. each.

Calla Lily.

This lovely plant hardly needs a word of description, it is so well known, so universally loved and admired and so indispensable with every flower lover and cultivator. It is most universally grown as a winter plant. Its stately appearance, its waxy-white golden-tongued flowers, and its power of flourishing under almost any treatment except freezing, rendering it a general favorite for the purpose. As it is naturally an aquatic, and in im-possibility to give it too much water, it is of great value to grow in conjunction with all the other moisture-loving plants offered in this cataloge. It will grow in shallow water, either in pots submerged or planted out like the Lilies and if below the reach of frost will, it is said, be found quite hardy. Fine, strong plants, 35c. each, 2 for 50c.
Choice New Hybrids.

The Gladiolus is the most valuable and showy of all summer-blooming bulbous plants, and so easy of cultivation, as absolutely sure to bloom profusely and perfectly for everyone and under almost any and all conditions, that it is no wonder at all that it has become the most popular bulb for the summer garden that is in cultivation to-day. We grow several hundred thousand bulbs from seeds saved from the cross fertilized or hybridized flowers of a mammoth collection of the most beautiful and choicest named varieties in cultivation. The flowers of these hybridized seedlings present a marvelous display of beauty which cannot be conceived of by those familiar with the old sorts only. Neither pen nor painter's brush can convey any adequate idea of the beautiful colors, shades and tints—some of them as white as the driven snow, with the loveliest markings imaginable, others so dark as to look really blackish, others of the most exquisite variegations, flakings, stripings so numerous as to produce a bewildering effect. The flowers of nearly all are of gigantic size and produced in very long spikes; and among thousands of bulbs hardly two will be found bearing flowers just alike. These immense flowers and rich colors are not obtained by growing the bulbs in rich soil, to the contrary they are grown in rather poor soil, consequently the bulbs are rather smaller than the average size of blooming bulbs; but this enables us to sell them at a much lower price, as the postage on them will not be so great. All great Gladiolus growers now agree that a Gladiolus bulb as large over as the top of a small ten cent cup is not half as much value, nor will not flower as finely as one no larger even than the end of one's finger, and Gladiolus fanciers who wish to raise the finest flowers possible, choose bulbs for planting about the size of the end of one's thumb. The bulbs we offer will every one bloom magnificently the coming summer if planted in good soil and kept free from weeds. Of course the richer the soil is made the more vigorously they will grow, the earlier they will come into bloom and the larger and finer the flowers will be. By starting the bulbs early in the house, in pots or boxes, and transplanting to the garden after the ground becomes warm and settled, they will have a longer period of growth and consequently bloom earlier and more surely. In the fall after the first frosts, lift them, cut off the tops, dry the bulbs and keep them over winter like potatoes. They make the finest display planted in masses, groups or clumps. The bulbs should be set about four inches apart and covered about three inches deep. We will send the mixed bulbs of these grand New Hybrids Gladioli to any address, postpaid, at the following astonishingly low rates: 1 dozen for 25 cents; 25 for 60 cents; 50 for $1.00, or 100 for $1.50. Larger bulbs by express.

Canna Robusta.

This is a very beautiful, robust bronze variety which well merits its name, for, with good cultivation, it will grow ten to twelve feet tall and produce gigantic leaves four feet long by a foot and a half wide, of dark bronze and greenish colors. Its flowers are bright scarlet followed by very ornamental seed-pods. It is a highly ornamental and striking plant, and a particularly valuable species for the centers of beds of green-leaved sorts. Acknowledged to be the finest of all foliage Cannas. Strong roots, 15c. each.

Canna Nepalensis.

A very fine sort growing from seven to nine feet tall. Leaves a peculiar shade of green, and the spikes of beautiful yellow flowers produced in the greatest profusion all summer. A very handsome variety and an exceedingly rapid grower. A bed with a cluster of Robusta in the center, surrounded by a circle of Nepalensis, and a wide border of Hybrid varieties, makes an ornament of great beauty and interest. Strong roots, 15c. each.

SPECIAL OFFER.—One root of each sort for only 25c.
Four Superb Cannas.

No class of ornamental foliage and flowering plants is better adapted to the American climate than the Cannas. Whether treated as pot plants or bedded in the open ground, they grow with the greatest vigor and produce a stately, tropical effect with their broad massive foliage; and the newer varieties present a constant blaze of the richest colored flowers imaginable, borne in dense heads or spikes well above the luxuriant foliage. It is nearly, if not quite, impossible to give Cannas too rich a soil or too much water while growing, and if these simple requirements are supplied they will yield most astonishing results. If not fertilized, the flower spikes that should be lifted in the fall, the tops cut off and the tubers wintered in a dry cellar, or some other place free from frost. Varieties producing strong tubers may be wintered dry in the same way potatoes or dahlias are, but varieties like Madame Crozy or Star of ’91, which produce very small tubers or “eyes,” are more safely wintered in a box of soil. Cannas, Star of ’91 and Flaccida will be found offered on page 6.

Madame Crozy. This is one of the grandest of all the Dwarf French Cannas of recent introduction. The color of its flowers is a brilliant vermilion scarlet, bordered with a deep golden yellow, the petals very wide and broadly rounded making a flower as large as a fair sized Gladiolus bloom. These flowers are crowded into immense heads, double the diameter of a Gladiolus, and held boldly aloft like flaming torches. The foliage is vivid green, broad and massive, and the habit of the plant compact and vigorous. It rarely attains a height of over four feet, the flowers commence appearing when it is scarcely a foot high and from then on are produced in such rapid succession that the plant is always in bloom. No lover of flowers should for want of room fail to emulate the magnificent Canna. Price, 25c. each.

Childs, or Tiger Canna. This fine sort is a chance seedling raised from Crozy’s Prize seed, and for vigorous growth and quantity of large, richly colored flowers no Canna can excel it. The large and perfect shaped flowers which are borne in good-sized compact spikes, are of perfect shape, the petals broad and of a bright, glossy yellow color, thickly spotted with crimson. A very choice sort. Price, 25c. each.

Ehemanni Canna. This finely colored variety is noted alike for its exceedingly ornamental foliage and its superb flowers. It is of very free growth, attaining a height of from five to seven feet and producing very broad, heavy tropical foliage resembling that of the Banana, giving it a grandeur and beauty distinct from any other Canna. The heads of which are borne large racemes of from twenty-five to thirty held or trumpet-shaped flowers, four to five inches long of the most lovely, brilliant rose-pink color and drooping like a Fuchsia. Price, 25c. each.

Noutoni, or Ghost Cardinal, Flowered Canna. A rare sort of great beauty, resembling Ehemanni but having narrower and lighter foliage. The gigantic spikes of flowers are the same in form but are cardinal-colored, extremely brilliant and striking, much like the blooms of the Cardinal Flower on a gigantic scale. It is a very free-blooming sort, never without good spikes of flowers held well above the foliage, and, owing to their great brilliancy, visible for a long distance. Price, 25c. each.

SPECIAL OFFER.—We will send these four Superb Cannas, amounting at catalogue prices to 50c., to any address for only 25c. Or for 30c. we will include a root each of Robusta and Xepentes offered on the opposite page, and a FREE GIFT of a Canna Flaccida offered on Page 6.

Caladium Esculentum.

This grand foliage plant is as easy to grow as a potato and will flourish anywhere, in or out of water, but thrives best on very rich, moist soil, and in such a position will grow from four to six feet tall, and produce leaves three feet long by two feet broad. It will attain this size even in ordinary garden soil if made very rich. The treatment suited to the Bulb, with free manuring and watering never neglected, meets the wants of this plant precisely. It delights in warm, sandy soil, and may be left out over frost cuts down the foliage before taking up for the winter. As a pot plant, grown in a place sheltered from winds in the summer, it grows to the height of four feet, and, with its immense leaves, lends a tropical appearance to collections which is exceedingly effective; and for the center of vases it is almost without a superior. Provided it receives rich soil and much water. It would be difficult to find another as beautiful and imposing decorative plant, that will accommodate itself to such various courses of treatment. The bulbs are kept over winter dry. Price, 5c. each, 3 for 10c. Very large bulbs, 25c. each, 3 for 60c.

In nearly all instances we can supply larger and finer bulbs and tubers when ordered by Express. Read on Page 1 the conditions under which we prepay Express Charges to your door.
Hardy Flowering Plants and Grasses.

Eulalias.

These beautiful grasses are perfectly hardy, and are among the most beautiful objects that can be grown in the garden. They soon form dense clumps, growing from six to ten feet high, and produce large, feathery plumes which are exceedingly beautiful and which, when dried, are as valuable as Pampas Grass plumes for dried bouquets and other winter decorations. As border and lawn plants these grasses have no superiors, and possess the advantage of resembling nothing else grown for the purpose.

Eulalia Japonica Variegata.—The firm but graceful leaves of this variety are marked widthwise with alternate stripes of creamy-white and green, much after the manner of the old "Ribbon" or "Striped Grass" of our grandmothers' gardens, and presenting quite as much variety in the striping, but taller and more erect, attaining a height of six feet, and the leaves longer and more robust. 15c. each.

Eulalia Japonica Zebraana, or Zebra Grass.—This, in its form, habit and plumes, is quite like the above, but its very dark, deep green leaves are striped or marked across instead of lengthwise, with bands of cream-white of varying width but very distinct and producing a very peculiar and beautiful effect. The cut conveys scarcely any idea of its true beauty and effect. It makes an elegant companion for the above sort. 15c. each.

Eulalia Japonica Gracilima.—This is a newly introduced variety totally distinct in appearance from either of the above. The foliage is very long and very narrow, of a beautiful green color with a silvery white mid-rib. Its name is very appropriate, for it is one of the most thoroughly graceful plants we know of, and highly desirable for any kind of decorative purpose. Like the above sorts this, too, is perfectly hardy. 3c. each.

SPECIAL OFFER.—The three sorts for only 10c.

Turkey's Beard.

(Xerophyllum Asphodeloides.)

A plant of much beauty, and one which should be universally grown. It delights in a rather moist soil, and produces a tuft of long grass-like foliage which is evergreen and very beautiful when decayed and dried, and is often used for dried bouquets. The plant will grow in any kind of soil. It thrives anywhere. 10c. each.

Yucca Filamentosa.

Probably there is not such another tropical appearing plant as this that is perfectly hardy everywhere. For cemetery decorations it is unsurpassed, and can be used in barren, rocky places with splendid effect. Although it thrives in the poorest soil, it does not object to any soil, no matter how rich, providing it is not wet. From the edges of the rich evergreen leaves depend long white filaments, and from the center of the plant springs a tall flower stalk surmounted by panicles, sometimes two feet in length, consisting of hundreds of creamy-white bell-shaped flowers. The effect of such a plant on a well-kept lawn or in the border, is most striking. Nice, strong seedling plants. 10c. each, 3 for 30c.
Hardy Hybrid Hibiscus.

These magnificent flowering plants are hybrid forms, obtained by crossing the most desirable hardy species in cultivation, and the results are immense saucer-shaped flowers which range in color from pure white through all the shades of blush and pink, to deep brilliant rose. The roots are perfectly hardy, and every spring send up numerous stout stems, which, from well-established roots, grow from five to eight feet tall, densely clothed from the ground up with leaves as large as one’s hand, and from July to September covered with flowers in the greatest profusion. For summer hedges, massing or single clumps on the lawn, few plants are so ornamental. Seeds, 5c. per packet. Roots, 10c. each; 3 for 25c.

Crimson Eye.—A distinct and very beautiful variety of the Hardy Hibiscus, with saucer-shaped flowers of immense size, pure white with a crimson centre. Plant a robust grower, with red stems and foliage veined with red, a profuse bloomer through the summer and fall months—even through the most severe droughts—and perfectly hardy. One year roots, 50c. each; three for 50c.

The Blackberry Lily.

(Pardanthus Chinensis.)

A very beautiful, useful hardy herbaceous plant with foliage very much resembling that of the iris, and is an equally valuable and desirable plant for the border or flower beds. The plants have branching flower stems which continue for several weeks to produce a profusion of Lily-like, orange-colored flowers, spotted with purple. The flowers are followed by seed-pods which look exactly like large, luscious, ripe blackberries, whence its common name. As these pods, or seeds, will not drop for a long time after the branches have been cut, when dried they are both useful and ornamental to mix with dried grasses, everlasting, etc.

Price of strong flowering roots, 15c. each, 3 for 40c.

Liatris Tenuifolia, or Gay Feather.

Nearly all the species of Liatris are plants of much beauty and well worth a place in any collection of hardy plants. The species we offer is sufficiently striking and distinct to attract instant attention among border plants, and should be extensively planted and widely known. It grows from two to four feet tall, the slender, graceful stems clothed with narrow leaves and terminating with a long spike or raceme densely covered with flowers, in color a soft shade of lilac-purple. So large and heavy are the racemes of flowers that the stems rarely can hold them erect, but under their weight curve gracefully to one side, nodding and swaying in the breeze. It is suited to any common garden soil, and after once planted (about three inches deep) requires no more attention than a Flax or Narcissus. The root is a corm, and should be kept in sand or soil, until time to plant out. Fine blooming size corms, 10c. each, 5 for 25c., 12 for 60c.
Curious Cacti.

Cacti have lately become very popular as window and garden plants, and this is no wonder when all their varied qualities are taken into consideration. They combine everything that is beautiful, unique and curious. Their spines are beautiful in both color and arrangement, while their flowers are gorgeous and in many exceedingly fragrant. Added to these points they require so little attention and stand so much neglect that it is a cause for surprise that they have not become immensely popular years ago. They revel in the dry, heated atmosphere of living rooms, and will not suffer if not watered for weeks or months. In fact, it is best to give them little or no water from October to February; then water freely and it is wonderful how they will grow and bloom. If desired the most of them can be wintered in the cellar, or a frost-proof closet, if the soil is allowed to become perfectly dry before removing them there.

Directions for Grafting.—Nearly all Cacti may be successfully grafted, and the process is exceedingly simple, no wax or binding being necessary. The work is extremely fascinating, and after a little practice one may form a great variety of beautiful and curious combinations. On page 31 is a cut representing Echinocereus Pectinatus grafted on a stock of Cereus Grandiflorus. The roots of the plant used as a stock, and also a part of the plant above the roots, are cut off, and an incision made. The Cereus stock is then cut in wedge-shape, inserted in the incision and held fast in it by a long Cactus spine. The operation is usually performed in early summer when growth is proceeding. Grafted plants not only look very curious, but make an enormous growth.

Caution.—Cacti are more easily killed from over-watering than from any other cause, unless it be freezing the tender sorts. Use very sandy soil and have perfect drainage. When first potted water but little, if any, until rooted. Cuttings will root in clear, dry sand. During the late fall and winter months they should be very sparingly watered; in fact, all except the very slender sorts will be just as well off without any water.

Cereus Grandiflorus.—The true Night-blooming Cereus of fame. Our illustration represents a two-year-old plant grown in a six-inch pot from a three-inch cutting, showing what can be done with this wonderful plant if well attended to and fed weekly with some liquid manure while growing. This same plant, at three years old, produced twenty-three flowers in one season and thirty-seven the next. The deliciously fragrant flowers are pure white, a foot across and begin to open at about 8 o'clock in the evening. It can be trained on a trellis or will climb up all around a window. 25c. each.

Cereus Splendens.—A South Florida Night-blooming Cereus of great beauty. Flowers straw-colored, rich and creamy, and five or six inches in diameter, followed by edible spherical fruit, which is bright red when ripe. A very beautiful and desirable sort, and very valuable as a stock on which to graft other varieties. 15, 25 and 50c. each, according to size.

Echinocereus Pectinatus.—In this we have a perfect little jewel, and decidedly one of the very best plants for blooming that can possibly be obtained. Such wonderful and persistent bloomers are they that the plants will actually bud and bloom while lying on a dry shelf where their roots have not been near soil for months. Strong single plants often bear twelve and fifteen flowers and open four and five at one time, and small plants will bloom profusely also. A large cluster has been known to give seventy-five flowers in one season. The flowers are enormous, often three and one-half inches across, of a beautiful bright purplish-pink and so fragrant.
that one flower will scent a whole room. The plant itself is simply exquisite, the spines being pure white, forming little rosettes with yellow eyes, and so closely pressed to the stem that they can be handled without harm. We have not another sort that we can say so much in praise of. Nice plants of blooming size, 5c. each; 5 for 35c.; 6 for 60c.

**Echinocactus Texensis**—Stems of a fresh green color, branching and often growing in dense masses. Large, fragrant flowers, three inches in diameter and bright crimson. A most attractive plant, a very free bloomer, and should not be omitted from any order. 3c. each.

**Echinocereus Enneacanthus**—This is a particularly handsome sort which pleases everybody, and cannot be too highly recommended. Plants vary from three to twelve inches across, very large green with beautiful spines; flowers very large, yellowish-rose and beautifully fringed, followed by large seed-pods that are extremely ornamental and remain several months in a bright red color. We are glad to be able to offer it very cheap. Fine little plants, 3c. each, 3 for 40c.; 6 for 75c. Larger and finer, 3c. each. Extra large, 6c. each.

**Opuntia Ficus-Indica**—Indian Fig Cactus. An exceedingly ornamental species of Cactus. Here in the open ground the plant reaches a height of ten feet, the leaves (joints) very large and heavy and without spines; a very striking object. Bears large yellow pear-shaped fruits which are eaten raw or used for jellies, etc. The fruit is sometimes shipped to New York from the West Indies. 2c. each.

**Opuntia Tuna**—One of the strongest growing species, a native of South Florida. Branches long, flat and elliptical, with numerous strong spines. Flowers large, yellow, often with a tinge of wine color, and very freely produced. Fruit two inches in length, purple and edible, often used in jellies, preserves, etc., for which it is very nice. 15c. each.

**Opuntia vulgaris**—Common Prickly Pear. One of the most handsome flowered species of the genus. Flowers large, rich golden yellow and produced in great abundance. Hardy as far north as Massachusetts. 10c. each.

---

**Stapelia Variegata.**

An exceedingly curious and interesting succulent plant, a fine companion for Caeti, with which it is sometimes crossed, though it does not bear the slightest relationship to them. From the base of the fleshy stems appear curious looking five-cornered buds, which gradually swell until, with a snap, they fly open and the flower stands revealed—a perfect star of very thick, leathery petals which are golden yellow, thickly spotted with dark brown. In the flower lies a perfect, round, fleshy ring, and in the center of that are the stamens and pistil. Altogether it is a most curious and beautiful flower, and none are easier to grow. It should not have a very rich soil, the drainage should be perfect and water should not be given too liberally—in fact, if you forget to give it any water at all for a month at a time it is all right. During the winter it should have a warm, light place and but very little water; in summer it may be placed on the window sill in a sunny place. Fine rooted plants,
Bulbs of the Amaryllis Family.

We wish to call special attention to our collection of this class of magnificent flowering bulbs, not that the collection is complete by any means, but never before have such beautiful and desirable sorts been catalogued at such extremely low prices. Not more than one or two of the Crinums we offer can be obtained anywhere in the North, and they would be catalogued there at much higher prices than ours, and it is acknowledged by all who have dealt with us that our bulbs of this family are the largest and most ever sent out by any concern, and we are proud of the reputation they have made for us.

Culture.—Nearly all members of the Amaryllis family require a season of rest from September or October, until February or March, during this period giving just enough water to keep the large fleshy roots from drying up and dying. At the close of the resting period, water copiously and keep the plants growing vigorously until the beginning of the next resting season. Their successful blooming depends on a vigorous growth of the preceding season. At the beginning of the growing period, remove the top soil down to the roots and replace with fresh soil containing a liberal quantity of well-decayed manure; also water with liquid manure frequently during the growing and flowering period, and shift the plants to larger pots when the soil becomes crowded with roots.

Amaryllis Equestre.

One of the most beautiful species of Amaryllis in cultivation, of the easiest management and invaluable as a winter bloomer, flowering very soon after the bulbs are potted. As shown by the cut here presented the flowers open out very flat, and are nodding, instead of being in the form of most Amaryllis. Flowers five or more inches across, bright, sparkling, orange-red, with a most beautiful green and white star in the centre. The bulbs should be ordered previous to April 1st, as they bloom here in March and April in spite of all we can do. No matter if we lay the bulbs on a dry board in the sun, they bloom just the same without roots or leaves. We know of no bulb so absolutely sure to bloom and please customers. It is offered at the North under the name of Roquins. We offer full grown, blooming size bulbs, of our own raising, at the remarkably low price of 15c. each, 3 for 40c., 6 for 75c.

"My Amaryllis Equestre is in full bloom to-day (18th) with two more buds. It is splendid!"—Mrs. H. J. Scott, R. I.

"The flower is a brilliant scarlet. It can be forced for use about the holidays, and is most effective in vases or baskets."—American Garden.

Amaryllis Aulica

Platypetala.

This is one of the most noble and beautiful of all the various species of Amaryllis. The bulbs grow unusually large, sending up strong evergreen leaves which are a deep, waxy green and arch over and outward in a most beautiful and ornamental manner. Two and three flower-scapes appear at one time, bearing immense flowers with very broad spreading petals which are sharply pointed and highly colored, rich crimson, checkered with veins of a deeper blood crimson. The bases of the petals are a beautiful green, forming a star in the centre of the flower, and above the green is a maroon blotch. It is entirely distinct from all other Amaryllis both in appearance and time of blooming, producing its flowers in November and early December when flowers are so scarce. This season we have only very large and heavy bulbs to offer, but they will bloom grandly. First size, ¾ inches in diameter, $1.50 each, postpaid; second size, ¾ inches in diameter, $2.00 each, postpaid.
Amaryllis Johnsonii.

This magnificent Amaryllis, so faithfully shown in our colored plate, although one of the earliest hybrids, is surpassed by very few of the new and costly varieties, and still remains a favorite house plant with all who know it, not only on account of its handsome foliage and gorgeous flowers, but because of its easy cultivation and its absolutely sure way to bloom them on demand. In its native and far-off lands, it is primarily a bulb, which, on account of its delicacy, is aptly termed "Old Reliable." For, with ordinary attention, it will flower twice each year—in winter and in summer—the bulb sending up two, three, or four strong flower-sheaths at one time, each bearing five or six large, brilliant velvety crimson flowers, each petal striped through the center with a broad band of pure white, and delicately fragrant. This bulb is one which has well defined seasons of growth and rest. From the time growth commences it steadily advances until the blooming period is past, and then, after a few weeks, the bottom leaves begin to turn yellow. When this occurs, withhold water almost entirely, giving only enough to keep the soil from going dust-dry. After the bulb has rested a sufficient length of time it will begin to show signs of growth—then water thoroughly and freely. When potting the bulb use a pot of medium size—one twice the diameter of the bulb will hold soil enough, and the upper third of the bulb should be above the surface of the soil. When watered, the bulbs are apt to pot, so do as the common method of potting bulbs, for which the Amaryllis is not at all adapted. These cultural directions apply to nearly all of the members of the Amaryllis family.

Our bulbs of this Amaryllis are exceptionally fine and strong, the largest we ever saw, and every one of them will produce two, three, or even four strong flower-sheaths at a time, each holding five or six gorgeous Lily-like flowers. Price of fine, large, blooming bulbs, 30 cents each. Monstrous bulbs, which will produce three and four flower stalks at each blooming, 50 cents each.

Amaryllis Formosissima.

(JACOBÆAN LILY.)

For richness and intense color nothing can surpass, even in approach, the flowers of this rare old Mexican bulb. In shape it differs from all Amaryllis, and in color they are a deep velvety intense scarlet, the nectar, richest and deepest we have ever seen in a flower. At a distance they look blackish, and when the sun shines on them they have the appearance of being sprinkled with diamonds. The bulbs of Amaryllis may be kept dry over winter, and in the spring set in the open ground, where they will quickly begin flowering. They are also fine for pot culture, and for growing in water, like Hyacinths, requiring the same treatment. Fine flowering bulbs, 15 cents each; 3 for 40 cents.

Crinums.

A great interest has lately been taken in these magnificent bulbs, and the demand for them is rapidly increasing as people learn what grand bloomers they are, and how easily managed. Since we first called the attention of Northern dealers to the beauty and value of Crinums, they have been eagerly sought after by all who heard of their great value and beauty, and we supply them with the bulbs of C. Americanum, C. Kirki (?) and C. Fimbriatum (Milk and White Lily), by thousands. Unfortunately, C. Kirki (?) is being offered under a variety of names, among them C. Kirki, C. Ornatum and C. Noble. But no matter what it is called, it is one of the loveliest and sweetest of all flowers, and undisputed Queen of Bulbs. This year we have the bulbs in such quantities as to be able to offer them to our customers at a price so low (but a slight advance over what we charge dealers by the thousand) as to be unprecedented in the history of a flower of such rare and majestic beauty.

(Crimum Kirki. This magnificent flowering bulb frequently attains the size of a child's head, and produces flowers of the greatest beauty. A blooming plant appears exactly as in the cut here presented, but which gives little idea of its stately appearance and the exquisite coloring of its flowers. Its leaves are wavy-edged and radiate in the form of a rosette. Usually two flower stalks, each two or more feet tall, and of a dark purplish color, are sent up at the same time, each bearing a large umbel, consisting of a dozen or more large, Lily-like flowers of the greatest beauty and fragrance. The petals are broad and pure white, with a deep reddish-purple stripe down the center of each of outside of each, and showing through faintly on the inside. Each individual flower is about the shape and size of those of the beautiful old Lilium Candidum. This and a very inferior species are catalogued as Kirki, Noble and Ornatum; but the true Ornatum is very distinct. Crinum Kirki is a plant which gives unbounded satisfaction to all who possess it, and never fails to be a sensation wherever it is in blossom. It may be grown as a pot plant, or bedded out in the spring, and in the fall lifted and kept dry over winter, like Giandoli, etc. We grow them by the thousands, and undoubtedly send out the largest and finest bulbs, at a lower price than they can be obtained for anywhere else. Fine bulbs, first size, 3 inches in diameter, 30 cents each; second size, much larger, 50 cents each; largest size, very fine, 75 cents.

"The package of bulbs and seeds came yesterday in splendid condition. The Crinum Kirki is the largest bulb I ever saw outside of the vaudeville freaks."—Amicie E. Dorsey, Anne Arundel Co., Md.

"My bulbs came in excellent condition. Crinum Kirki is a magnificent bulb. If Mrs. Paddock gets a bulb like that she will be in ecstasies. I cannot imagine how you can sell them for the very low price you ask. My friends were so heartily pleased with them and by everything nice, and I thank you sincerely."—Mrs. Elmer Hills, Ohio.
Catalo 0f RARE FLORIDA FLOWERS AND FRUITS FOR 1894.

Crinum Pedunculatum,
Or St. John's Lily.

King among Crinums, mature plants having reached a height of three to six feet, and a corresponding breadth of magnificent foliage. Much like a giant form of Calla Americana, having the same kind of flowers, only larger and in an immense umbel of twenty to thirty or more, borne on a scape three or more feet tall. Flowers pure white, very fragrant and produced at intervals throughout the year. The cut gives some idea of the general appearance and habit of this plant, but conveys a very poor impression of the form and great beauty of the pearly white, purple anthered flowers. Full size bulbs are large and stump-like and can be sent by express only. Our stock is limited and has cost us nearly as much as we charge. First size, by mail, 50c. each; second size, by mail, 75c. each; very large blooming bulbs, by express only, $1.75.

"The St. John’s Lily (Crinum Pedunculatum) I received from you is proving to be a remarkable plant. The bulb has got to be five inches through and fifteen inches round it, with thirty broad, upright leaves from one foot to two feet and a half long, and the base of the outside leaf spans the neck of the bulb. The past summer and fall it had three blossom-stalks bearing fifty-seven lilies, remaining in blossom eleven weeks, and I am looking for another stalk, as they come on the quarter. It is an evergreen and a majestic plant."—L. F. Thayer, Somerville, Mass.

Crinum Americanum.

An evergreen species and one of the easiest culture, is best grown as a pot plant and can be wintered in the cellar if the soil is kept nearly dry. Its large, white, exquisitely fragrant, Lily-like flowers are produced in an umbel and borne on a tall scape. A striking plant and far more beautiful than many of the high priced Amaryllis, and in cultivation blooms several times a year. It grows naturally in swamps where the soil is rich much and very wet. It can be kept growing and blooming (at intervals) the year round. We offer fine blooming size bulbs at the extremely low price of 15c. each; 3 for 40c.; extra large, 35c. each.

Crinum Fimbriatulum,
Or Milk and Wine Lily.

A grand sort, almost as beautiful as the Kirkii, but its bulbs do not grow as large, and its strong growing foliage is erect and sword-shaped. Flowers in umbels, very large, the umbel of three to four inches in diameter, striped with white and carmine and very fragrant. Fine blooming bulbs, 15c. each; largest size, 30c. each.

"I must tell you that Milk and Wine Lily has done famous work. I think it has developed nine fine blooms, and there are two unopened buds. We therefore gave it a free ride last Sunday (July 9) to any chapel services. I filed in dark gay flowers at the base of the stalk, which measures fifteen inches in height. There were ladies and gentlemen from the various towns to admire and enjoy it."—Mrs. E. Adams, Mass.

Japanese Pink
Spider Lily.

The White Spider Lilies have given the greatest satisfaction and quickly become lasting favorites with all who have grown them. It is not too much to predict that the beautiful Pink Japanese sort (Lycoris [Varicca Japonica] Radiata) we now offer will meet with an enthusiastic welcome from all lovers of truly beautiful flowers. As shown in our cut, the spikes of flowers are produced in graceful umbels and are most delicate and beautiful, varying in color from pinkish-salmon to pink, vermilion and scarlet, with petals beautifully undulated, and by artificial light sparkling like jewels. The flowers suddenly appear during the fall months, after the leaves of the plant have died down. The bulbs may be kept in a pot the year round, or kept dry over winter and bedded out in the spring. Price of large, blooming size bulbs, 15c. each; 3 for 40c.; 6 for 75c.

We can send splendid bulbs by Express, Charges prepaid. See conditions on Page 1.
“Sacred Lily of Italy.”

(*Pantcrtium Maritimum*)

This is the sacred flower of Italy, a true Panctrium found growing on the seashore of that country. It bears large panicles of pure white, deliciously fragrant Amaryllis-like flowers, yellowish inside and of great beauty. If whole stems are cut and placed in water the flowers will continue opening in succession for two weeks. It is perfectly hardy on Long Island, N. Y., and if planted a foot in the ground, in light sandy soil, it will probably prove hardy nearly all over the North. It makes a delightful pot plant to grow with other Amaryllis, and may be wintered in the living room, cellar, pit or cold frame. Fine flowering bulbs, 15c. each; 3 for 40c.

**Hymenocallis Rotata.**

It is with pleasure we announce that at last we have acquired a fine stock of bulbs of this old but rare Spider Lily, which is one of the most beautiful and very highly prized in Europe. Every umbel produces a whole bouquet in itself, and when several are placed together in a vase or jar the effect is simply indescribable, and the delicious fragrance of the delicately beautiful white flowers must be inhaled to be appreciated. It is very distinct from all the others and equally as desirable. We are not aware that the true stock is possessed by any other firm in the United States. Strong blooming bulbs, 15c. each; 3 for 40c.

**Giant Spider Lily.**

(*Hymenocallis* [*Pantcrtium*] *Caribbeum*.)

This magnificent South Florida Spider Lily produces immense umbels of often as many as twenty-five flowers, and nearly always two or more flower scapes at the same time. The flowers are airy and fragrant appearing and deliciously sweet scented. In the center of each flower is a beautiful crown or saucer resembling tissue paper. It is a very popular flower for forcing in winter for cut flowers, and is particularly desirable for planting out in the open ground for summer blooming. In the fall the bulbs may be pulled up and kept dry over winter the same as Gladiolus, etc., or be grown in pots and water withheld when they evince a desire to rest. Too large pots should not be used, as they bloom best when pot-bound. By having several bulbs on hand, and planting them out at intervals of two or three weeks, an almost unbroken season of bloom can be kept up. They make lovely beds cut in the sod of the lawn and planted about three inches apart. The past season we saw them growing luxuriantly in the open ground in New York, and blooming profusely until cut down by frost. Unfortunately it has been erroneously stated in one or two popular works on plant culture that these bulbs will not flower outside of a greenhouse. This is a great mistake, for they are as easily grown as a potato, and will bloom magnificently after having lain dry for weeks. Fine blooming size bulbs, 15c. each; 3 for 40c.; 6 for 50c.; 12 for $1.50.

**Cooperia, or Giant Fairy Lilies.**

These charming summer-blooming bulbs are closely allied to the Zephyranthes, but have a very distinct appearance. They produce their beautiful, Primrose-scented, Lily-like white flowers on stems ten to fifteen inches tall, and are remarkable in the Amaryllis family for opening their flowers first during the night. They are equally desirable for pot culture or for the open ground, and can be wintered in the pots or dry like Gladiolus bulbs. Cooperia Pedunculata—This is the largest, with bulbs often as large as an Amaryllis. Flowers white, with but a faint odor. Blooms from April to October inclusive, usually five days after a rain, the flowers appearing as if by magic. 1c. each; 3 for 25c.

Cooperia Drummond—The smallest species. Flowers sweet-scented and white, the tube, which is five inches long, turning red. Blooms from August to October. 1c. each; 3 for 25c.

Cooperia Oberwetteri—Named in honor of its discoverer. It is intermediate between the two first and is believed to be a natural hybrid. It resembles C. Drummond in regards the flower and time of blooming but the flower tube is one and one-half inches shorter, the peduncle longer, and the stigma of the style is raised above the anthers, while in Drummond it reaches only to the orifice of the tube. It is also larger in all its parts and is considered the finest of all. 1c. each; 3 for 25c.

SPECIAL OFFER.—We will send one each of three sorts for only 25c., or 3 of each for 60c., or 6 of each for only 75c.
Tuberoses.

Everyone is not aware that the beautiful Tuberose is a member of the great Amaryllis family. The cut gives a good idea of a section of the long spikes of pure white, wax-like, double flowers which are of great beauty and fragrance. Early in the spring fill pots one-third or one-half full of old, thoroughly decayed cow manure, packed down firmly; then fill up with rich sandy soil, insert the bulbs so that the tops will be just covered, water thoroughly and set in a very warm position to sprout. They may be grown all summer in pots, or turned out into a very rich spot in the border after the weather becomes thoroughly warm; but they must be abundantly supplied with water in dry times.

Excelsior Pearl Tuberose.—This is the most superior variety in the world on account of its short stocks, and long spikes of large and very double flowers. Fine flowering bulbs 5c. each, 3 for 15c., 12 for 40c. Select bulbs of the largest size, 10c. each, 3 for 25c., 12 for 60c.

New Variegated Tuberose.—The leaves of this rare variety are bordered with creamy white, and, unlike the other varieties, the same bulb continues to bloom year after year. The exquisite flowers are single, but very large and delightfully fragrant, and produced several weeks earlier than the other sorts, which adds greatly to its value. It is a rare and novel plant. Fine bulbs 10c. each, 3 for 25c., 6 for 40c.

"Handsome Tuberoses are no one ever knew than mine were this summer. And the Fairy Lilies are rightly named, for indeed they are fairies, especially the white."—Mrs. S. C. Matson, Iowa.

Zephyranthes,
or Fairy Lilies.

PINK FAIRY LILY.

The great Amaryllis family has given us many rare gems, but none that can surpass, if equal, in delicate beauty, purity and sweetness, these fair flowers, most happily styled Fairy Lilies or Zephyr Flowers. They can be planted in the open ground in the spring, or set several together in a pot, and will produce their beautiful Lily-like flowers all summer. A very satisfactory way to grow them is by planting around the edges of pots containing large growing plants, such as Oleanders, Roses, Fuchsias, etc. In such a position they will flourish and bloom for years, the roots of the large plants serving to keep the soil sweet and friable.

Atamasco Lily (Z. Atamasco).—The flowers of this species are exactly like those of the White Fairy Lily (Z. Tarenta), but the foliage is stronger and wider, the bulbs larger and much more certain to bloom. The flowers are about three inches across, of dazzling whiteness, deliciously sweet scented and borne on scapes about one foot in height. As soon as potted many of them will send up bloom at once, before they produce any foliage, and many will continue to bloom at intervals throughout the entire season. For Easter decoration they are particularly appropriate, and quite unsurpassed. Perfectly hardy as far north as Penn. 5c. each, 3 for 10c., 6 for 15c.

Peruvian Swamp Lily (Z. Candida).—Also pure white but very distinct from the above. Has fleshy, rush-like leaves and a profuse bloomer. Makes a beautiful border for flower beds, with its rich green leaves thickly studded with large white flowers. 3 for 10c., 12 for 30c.

Zephyranthes Andersonia Texana.—A dainty little species from Southern Texas, having beautiful little golden yellow flowers much like a Crocus. Very desirable indeed. 5c. each, 6 for 25c.

Pink Fairy Lily (Z. floret).—Also pure white but very distinct from the above. Has fleshy, rush-like leaves and a profuse bloomer. Makes a beautiful border for flower beds, with its rich green leaves thickly studded with large white flowers. 3 for 10c., 12 for 30c.

SPECIAL OFFER.—We will send three bulbs of Z. Candida and one each of the other three for only 25c. Or twelve Candida and three each of the other three sorts for 30c.

SPIKE OF EXCELSIOR PEARL TUBEROSA.
FO R ornamental and decorative purposes few plants can equal the grand and stately Palms. They succeed finely as pot plants in living rooms and every year of their age adds to their size, beauty and usefulness; but, as with Orchids, the high prices at which they are sold prevent them from being universally grown, and they can hardly be found outside the conservatories of the wealthier. With the hope of being able to offer the following collection of elegant, desirable and easily managed sorts at prices which will put them within the reach of all. They have been grown in latticed houses and are much harder and vastly superior, for window culture, to those grown under glass at the North. In potting Palms the soil should be packed about the roots very firmly and rather small pots used, shifting to larger sizes only when the pots become filled with roots. They do finely in a soil of loam and sand. Leaf mold does not seem to suit them as well as a heavier soil. There is more danger of using too large, rather than too small pots. The drainage should be perfect and there should not be a lot of unused soil about the roots to become sour. Do not repot until the old pots are filled with roots, and instead of using wide pots use deep ones, as the roots prefer to go down rather than out. Do not set up until the old pots are filled with roots, and instead of using wide pots use deep ones, as the roots prefer to go down rather than out. Do not set up until the old pots are filled with roots, and instead of using wide pots use deep ones, as the roots prefer to go down rather than out. Do not set up until the old pots are filled with roots, and instead of using wide pots use deep ones, as the roots prefer to go down rather than out.

**Areca Lutescens.**—One of the handsomest and most useful Palms for house culture to which it adapts itself readily. Once established, it makes a regular growth, and if given a fair amount of light it will prove superior to very adverse conditions. Its beautiful leaves are pinnate and gracefully arched, rich shining green, and very firm in texture. The stems and sheathing petioles are perfectly smooth, as if polished, yellow in color, mottled with black, forming an elegant contrast with the deep green leaves. Flourishes best in the shade. Strong plants, 30c. each. Larger and finer, 40c. each.

**Corypha Australis.**—An Australian fan-leaf Palm of great beauty and extreme hardiness, showing striking characteristics while in a very young state, which greatly augments its value as a pot plant. Here in Florida it is almost as hardy as the Cabbage Palm, and this hardiness and its robust constitution renders it the more valuable for pot or house culture, successfully withstanding both a low and high temperature. Its fan-like leaves are very dark green, deeply split, and supported upon brown stems which are armed at their edges with stout spines. Strong plants, 5c. each. Larger and finer, 6c. each.

**Caryota Urens, or Fish Tail Palm**—so called from the resemblance of the pinnae to the tail of a fish, appearing as if some one had trimmed the leaves with scissors. It is one of the very few Palms with bi-pinicate leaves and is a very elegant species for house culture—one which we can highly recommend. 25c. each; larger, 45c. each; fine specimens, 15 inches high, by express, $1.00 each.

**Cocos Weddelliana.**—A perfect little gem; one of the most elegant and graceful Palms that has ever been introduced. The plant is dwarf and very neat; leaves whitish-green on the underside, and arching out most gracefully. It is finely adapted for decorations of all sorts and easily endures the hardships usually falling to house-plants. We believe it has never before been offered so cheap. Beautiful little plants, 25c. each; larger and finer, 50c. each.

**Cocos Plumosa.**—A very strong grower and one of the handsomest Palms in cultivation. Its long, feathery leaves as the name Plumosa suggests, are dark green above, glaucous below and highly decorative. Fine, young plants, 30c. each.

**Dioon Edule.**—This is in reality a Cycad, but is so closely related to the Palms that we give it a place here. It is a very curious and at the same time a very beautiful plant, and forms one of the most noble objects in a collection of ornamental-leaved plants. Leaves a light bluish-green, clothed at the base with white woolly hairs; in shape they are much like a Fern-leaf, but in texture very firm and remain on the plant for years. Thrives finely in a good compost of loam and sand. Everyone should secure one for their plant room. Fine, young plants, 40c. each; larger and finer, 60c. each.

CHAMÆROPS EXCELSA.

Chamærops Excelsa—The hardiest of all Palms, and said to have stood three degrees Fahr., with only a slight covering. Quick growing and one of the very best Palms for house culture in cool climates, soon forming a fine specimen and standing ill-usage remarkably well. Its pal-mate leaves are very handsome. Should be extensively planted in the open ground in Florida. 20c. each; larger, 40c.

Latania Borbonica—The Chinese Fan Palm, from which the palm leaf fans of commerce are made. The most popular Palm in cultivation for decorative work; stands neglect well, and also a considerable amount of cold. If grown in partial shade while young, the leaves will be of a richer, darker green. Fine plants, 15c. each; larger, 40c. each; very fine, eighteen inches to two feet high, by express, 60c. each.

Oreodoxa Regia—The Royal Palm. One of the grandest of the pinnate-leaved Palms, of very graceful outline, and a great favorite. Stands light frosts unharmed. Small plants, 20c. each; very fine, two and one-half to three feet, by express, 75c. each.

Phoenix—All the species of this genus here offered are perfectly hardy in Florida, and should be extensively planted for lawn and avenue ornamentation. They are also equally well adapted for pot culture at the North, being exceedingly beautiful and standing a great variation of temperature.

Phoenix Canariensis—one of the finest, most hardy and rapid growing of the Date Palms, being in every way desirable. Pinnate-leaved, as are all of the species of Phoenix. 20c. each; very fine, two feet high, by express, $1.50 each.

Phoenix Dactylifera—The true Date Palm. A beautiful species and highly interesting as producing the dates of commerce. Leaves a beautiful bluish-green color. 15c. each.

Phoenix Pumila—A handsome and remarkably quick growing species will grow in any well fertilized soil. 25c. each; very fine, two feet high, by express, 60c. each.

Phoenix Reclinata.—A very beautiful and hardy South African species. Leaves gracefully reclinate. Largely grown as a pot plant for the house, for which purpose it is especially suitable. 25c. each; larger, 35c. each; very fine, two feet high, by express, 60c. each.
Phoenix Sylvestris.—One of the hardiest and a very rapid-growing Palm, forming magnificent specimens. Leaves grayish-green; very ornamental. 30c. each; very fine, eighteen inches high, by express, 60c. each.

Phoenix Tenuis.—A recent and very elegant addition to the genus, resembling P. Dactylifera in general appearance, but is more slender and finer in all its parts. A very handsome Palm. 30c. each.—(See cut on page 37).

Sabal Palmetto.—The historical Cabbage Palm or Palmetto of the South, very hardy, resisting severe cold unharmed, as well as a great deal of abuse. A very ornamental Fan Palm, and when the plant becomes old the leaves are of great size. 15c. each. (See cut on page 37).

Seafordthia Elegans—A most graceful Palm, very popular for decorative purposes. Famed the world over for the feathery elegance and graceful character of its dark green, perfectly smooth, pinnate leaves. 20c. each; larger and finer, 40c. each.

Dracænas and Pandanus.

These are magnificent decorative pot plants invaluable for growing with Palms. They succeed admirably with ordinary pot culture, standing the heat and dust of living rooms with impunity, and, as with Palms, every year of their age adding to their size, beauty and value. They, also, have been held at prices too high to bring them within the reach of the masses. Considering how choice and rare they are, our prices will be found to be extremely low. Potted specimens may be seen on the lawn or in the garden in Florida, and only removed to the house during the few frosty nights of winter. Very easily moved and transplanted.

Dracæna.
(Dragon Tree).

These rank among the most beautiful and useful of the ornamental foliage plants. In a large or small state they are alike elegant and attractive, their richly colored leaves giving a splendid tropical effect. For the window and sub-tropical garden they are deservedly popular, and for lawn decoration large plants of many of the species have no equal. They may be plunged in the open ground during the summer, and removed to the house in the fall. They succeed finely in a soil consisting of one-third part leaf mould, some sand, and kept pretty moist.

Dracena Terminalis Rosea.—A magnificent decorative plant with gorgeous shades of bright carmine, bronzy-green and pink on the foliage. As beautiful as it is striking and ornamental. 90c. each; large and fine, 40c. each.

Dracena Brazilensis.—This is a very decorative species, a very robust grower, with broad, rich green foliage. Very bold and striking—a really tropical appearing plant. Very fine large plants by mail, postpaid, 30c. each; larger, beautiful specimens, two feet or over high, by express, 75c. each.

Pandanus Utilis.
(Screw Pine).

One of the most noble, beautiful and useful decorative plants that can be grown. For majesty of form and gracefully arranged foliage it is almost without an equal, while its vigorous constitution enables it to stand more neglect, without serious injury, than almost any other plant we know of. Whether in the window garden, the centre of a vase or hanging basket, or among the palms in summer, it fills a place for which it seems especially adapted. The sharply serrated edges of the leaves are bright red and the body of the leaf green, glistening in the sunlight and rendering it unusually attractive. A plant which will delight everybody. Fine mailing plants, 25c. each; large and extra fine, 40c. each.

No more exhorbitant Express Charges. Read all about it on Page 1.
Half Hardy, or Pot Shrubs.

This magnificent class of plants used to be very popular, but has been crowded out for a time by the craze for "bedding plants." But they are coming in for their share of attention in the near future, and well do they deserve it. They can be grown in pots, boxes or tubs, grouped about the lawn, or plaza, where they will bloom profusely all summer and wintered in the cellar if desired. Each passing year will add to their size and value. We feel justified in saying that no class of plants will furnish so much enjoyment in return for so little care. All they require is good soil and liberal waterings during the summer.

Ardias.

Ardisia Crenulata—A handsome evergreen shrub, producing a profusion of white flowers and clusters of vermilion colored berries which remain on the plant for a long time. Being evergreen and covered the year round with either berries or flowers, or both, the plant is always highly ornamental and beautiful. 25c. each.

Ardisia Pickeringii—A beautiful broad-leaved evergreen shrub, native of North Florida. Leaves Laurel-like; fragrant, white, purple-tinted flowers, produced in delicate panicles in fall and early winter, followed by glossy black, edible berries. Blooms when very small. 25c. each.

Achania Malva Viscus.

One of the most satisfactory house plants grown, as it is always in bloom and never attacked by insects of any kind. It covers itself with a profusion of brilliant scarlet axillary flowers which continue beautifully with its green, heart-shaped, sharply pointed leaves. Also, very valuable for bedding out as it will stand the hottest sun and drought. 1c. each.

Cherokee Bean, or Erythrina Herbacea.

A Florida plant having a large, fleshy, carrot-like root which sends up strong shoots bearing beautiful leaves and immense racemes of the most brilliant fiery scarlet flowers. These are followed by broad pods which burst, revealing the bright red "beans," and remaining on the plant for months. If desired the root can be put in the open ground in the spring, and wintered in a box of dry soil. Fine pot-grown tubers, 25c. each.

Crape Myrtle.

(Lagerstroemia Indica)

What the Lilac is to the North the Crape Myrtle is to the South. It thrives anywhere and everywhere and blooms all summer long. Were it but known what a grand plant it is everybody in the North would grow it. Our cut shows the appearance of one individual flower, but we leave it to our customers to imagine the appearance of a bush completely covered with large panicles consisting of such flowers. The petals of the flowers look like crape, and the panicles of bloom are larger than those of the Lilac. It can be set in the open ground in the spring, where it will bloom freely and in the fall be dug up, put in a box, and wintered in a cellar. Or it can be kept in a box or tub the year round.

Light Pink—A favorite. 15c. each; 3 for 40c.
Scarlet—Very fine. 15c. each; 3 for 40c.
Purple—Choice. 15c. each; 3 for 40c.
Express size of the above three sorts, 50c. each.
White—Very rare and exquisitely beautiful. 25c. each.

SPECIAL OFFER—One each of the above four sorts for 75c.

Cassia Brazilensis.

This is an exceedingly rare and very beautiful South American shrub which we do not think is offered by any other firm in the United States. It was introduced at the North a few years ago and at once recognized as a pot shrub of the greatest merit, but

Of many pot shrubs we can send larger, finer specimens by Express than by mail, and in better shape, leaving more soil on the roots, etc.

Read carefully on Page 1 the conditions under which we will fully repay all Charges on Express shipments.
Camphor Tree.
(Cinnamomum Camphora.)
The Camphor Tree or Camphor Laurel of China and Japan from which the gum camphor of commerce is obtained. A beautiful evergreen, hardy in the lower Gulf states. Leaves smooth and a rich shining green, the newer growth tinged with a beautiful wine color, making a striking contrast. One of the most symmetrical trees imaginable, forming a perfect cone from the ground to the summit. It should be extensively planted in Florida as an ornamental tree for yards and streets, and at the North as a pot or tub plant on account of its very ornamental character and its very aromatic leaves and berries when bruised or crushed. May be wintered in the cellar. Fine plants, 25c. each; extra large and fine, by express, 40c. each.

Cinnamon Tree.
(Cinnamomum Zeylanicum.)
The bark from the young shoots of this tree forms the cinnamon of commerce, and the leaves yield a fragrant oil. It is perfectly hardy in the South and should be planted both for its usefulness and beauty. It is perhaps destined to be one of the leading economic plants grown in Florida. Of immense value, the annual product selling for millions of dollars, and the demand constantly increasing. Everybody in Florida should plant at least one, for it will grow in the whitest sand, “sand-soaked” soils, “drift-woods,” “pine barrens,” or “hard-pan” lands. When planted three years they can be cut back and the bark stripped from the branches for use. And as a pot or tub plant for the North it will prove very interesting as well as beautiful. Give the same conditions and treatment as Camphor Tree. Price of strong plants 25c. each; extra large, by express, 40c. each.

Cape Jessamine.
(Gardenia Florida fl. pl.)
One of the most beautiful and desirable evergreen shrubs in existence, producing large, double, white, exquisitely fragrant flowers from May until September. Hardy throughout the lower South. Our cut is a very poor representation and conveys no idea of the beauty of either plant or the large waxy, white flowers. 15c. each, 3 for 40c.; larger, 30c. each.

Cestrum Parqui.
(Night-Blooming Jessamine.)
This is the famous Night-Blooming Jessamine, producing beautiful white flowers in clusters, and the greatest profusion, over-poweringly sweet at night. It is said to be the most valuable of all perfume plants. It is a lovely pot plant, and is of easiest culture, thriving to perfection in good loam and sand. 25c. each.

Cestrum Diurnum.
(Day-Blooming Jessamine.)
The day-blooming species. A handsome, quick-growing evergreen shrub, producing quantities of sweet-scented, white flowers, valuable for cut-flower work, and somewhat resembling Catty-tuff. A fine pot plant of the easiest culture. 25c. each.

Clerodendron Fragrans Flore Pleno.
The cut conveys but little idea of the great beauty of this much neglected plant. It is of low, shrubby growth with large, tropical-looking leaves, dull green above and dusty appearing beneath. From the axils of the leaves appear compact heads of the most exquisite, waxy, white flowers exactly like miniature Camellia blooms, and of the most delicious fragrance, at times giving a pleasing Banana-like odor. The flowers are produced in such a compact head as to resemble a bouquet. Given a rich soil it blooms profusely; can be wintered in the cellar or kept up for winter blossoming. If cut down by frost sprouts readily from the roots. Price, 15c. each; 3 for 40c.

Coffee.
(Coffea Liberica.)
The true Liberian Coffee Plant, a beautiful evergreen shrub with wavy, shining, dark green foliage and sweet-scented white flowers disposed in axillary clusters of four to five. A fine companion for the Tea Plant offered below. Give ample pot room and plenty of water. Strong plants, 30c. each.

Camellia Thea, or Tea.
This is the true Chinese Tea Plant, which makes a beautiful little evergreen pot shrub, covered with lovely single white flowers, each with a profusion of golden-tipped stamens. Aside from its novelty it is truly beautiful—much more so than many popular plants—and of the easiest cultivation. It is perfectly hardy throughout the Gulf States, where good tea may be prepared from its leaves. Nice pot-grown plants, 25c. each.
Daubentonia Punicca.

An exceedingly beautiful and very rare pot-shrub almost, if not quite, unknown at the North. It forms a lovely little miniature tree, with long, slender branches curving upward and outward giving the top an umbrellalike shape. Its leaves are like those of the False Acacia, and its pea-shaped flowers, produced in racemes like those of the Locust, are vermilion-red. When the plant blooms it hangs full of these brilliant pendent racemes, presenting a gorgeous and beautiful sight unlike that of any other plant with which we are familiar. Fine thrifty plants, 25c. each.

Elaeagnus Pungens Var.

A beautiful evergreen, spiny shrub from Japan. The oblong leaves are a beautiful silvery color beneath, the upper surface smooth and handsomely variegated with green and yellow. It makes a fine pot plant, and in this State is perfectly hardy in the open ground. We don’t think it is offered by any other firm in America. 25c. each.

Hamelia Patens.

Decorus—Foliage very large and lobed. Flowers enormous, on long stems, of a beautiful scarlet carmine color; stamens and pistils very showy; the stigma is large, circular and golden yellow.

Grandiflora—Rich, glossy foliage, blooming profusely during the summer, literally covering the plant with scarlet-crimson, single flowers.

Miniatius Semi-Plena—Large, semi-double, brilliant and attractive; bright vermilion scarlet. Ought to be in every garden.

Rosa Sinensis—Flowers red and very large, averaging nearly six inches in diameter.

Sub Placaeus—Flowers of enormous size; of a beautiful carmine, tinted with violet; probably the largest flower of the Hibiscus family, and an unusually free bloomer. We take great pleasure in recommending this fine plant.

Versicolor—A variety combining in its flowers all colors of the whole family, being handsomely striped crimson, buff, rose and white.

Zebjinus—Petals scarlet, edged and striped with creamy yellow and white. A unique variety.

Price, 25c. each; any three for 50c.; or the entire collection of 10 for only $1.30.

Eugenia Micheli.

(Cayenne or Surinam Cherry.)

This forms a beautiful bush in a pot, or a small tree in the open ground in this State, covered with small, glossy, evergreen leaves, and produces quantities of beautiful cherry-like fruits, having a delightful acid taste, which is the greatest demand wherever known. It is one of the very best pot plants for producing showy and edible fruit, and as it will grow under very adverse circumstances, is deserving of being widely known. 25c. each.

Golden Dew Drop.

(Duranta Plumieri.)

A handsome evergreen pot-shrub bearing racemes of lovely, delicate blue flowers in great profusion. They resemble the flowers of the Forget-me-not, but are larger, are produced for at least three months and are rapidly followed by clusters of beautiful golden berries which hang on for six months, so the plant is ornamental three-fourths of the year. 35c. each.

Hamelia Patens.

A plant of which but little idea of its great beauty is conveyed by the cut. A native of extreme South Florida, and must become a great favorite for open-ground planting South, and as a half hardy shrub at the North. Its leaves have a purplish hue at some seasons of the year, and its bright orange-red flowers are produced here for months during the summer, and remain perfect for weeks. As a pot plant it blooms continuously. A well-known floral writer reports that her plant has not been out of bloom for three years. If pinched back occasionally it will make a fine shrubly plant. With age it becomes, in this State, a woody shrub five to twelve feet high. 25c. each.

Chinese Hibiscus.

These magnificent flowering plants give unbounded satisfaction either as pot plants or bedded out in summer. They bloom the year round, completely loading themselves with gorgeous flowers, either single or double, of enormous size, and contrasting most beautifully with their clean, glossy green foliage. They are of rapid growth and as easily managed as a Geranium.

Aurantiaca—Large, double, orange-colored flowers. An early and profuse bloomer.

Carminarius Perfectus—Full, round flower, of perfect shape, and of a rich carmine rose, with a deep crimson eye.

Collerii—A remarkable new, distinct variety, introduced from the South Sea Islands. Flowers buff yellow, with a crimson scarlet base, and peculiarly handsome.

Jerusalem Thorn.

Known in Texas and Mexico as Retama; botanically it is Parkinsonia aculeata. A highly ornamental evergreen shrub of great beauty. Has extremely curious leaves, consisting of a mid-rib eighteen or more inches long, bearing tiny leaflets each side of its entire length. The leaves close up at night, hanging down in a graceful manner and giving the plant a beautiful weeping appearance. Its beautiful, showy yellow crimped flowers, with a sweet, woody odor, are disposed in short, loose, axillary racemes. Perfectly hardy as far North as Beaufort, S. C., where it forms a tree twenty-five feet high. When grown as a pot-plant it should be well drained. A plant which will attract attention anywhere. Plants, 25c. each; seeds, 10c. per packet.
Jasminum, or Jessamines.

This class of Jessamines is noted for the combined beauty and fragrance of all its varieties. They are great favorites, as easy to grow as a Geranium, and among the best perfumery plants.

**Grandiflorum** (Catalonian Jessamine)—One of the most desirable of the species. The plant is of shrubby, half climbing habit, with very delicate foliage, and its small, star-shaped, fragrant flowers are produced in the greatest profusion all the year round. 15c. each.

**Gracillimum**—A new Jasminum, and remarkable for its freedom of bloom. Of graceful habit, the long slender branches springing out near the ground and curving over on all sides. A flower shoot is produced at every joint, which terminates in a cluster of pure white very fragrant flowers. Is in bloom from October to February. 3c. each.

**Grand Duke**—This Jessamine is very costly grown, even small plants bear a profusion of very double creamy white flowers, having a delicious perfume. It is a magnificent plant, and will become one of the most valuable and popular pot plants when it becomes better known. 3c. each.

**Hirsutum**—Flowers in umbels, pure white, large, fragrant; petals six to nine. Grows in the form of a miniature bush. 15c. each.

**Revolute**—Yellow flowered, growing readily to the height of from ten to twenty feet. Exquisitely fragrant and hardy North to Maryland. 15c. each.

**Lucidum**—Twiner, with shiny, evergreen leaves and clusters of white, star-shaped flowers. 15c. each.

**Sambac** (Arabian Jessamine)—The most deliciously fragrant of all. Flowers single, white, and borne in cymes. Plant climbing and blooming all the year round. Will give unbounded satisfaction. 15c. each.

**Lion’s Tail, or Leonotis Leonurus.**

An old plant but lost to cultivation until re-introduced a few years ago. A very showy plant, as easy to grow as a Geranium and constantly in bloom during the entire winter. The bright, orange-colored flowers look as if made of plush, and are produced in whorls as shown by the cut. 1c. each.

**Melia Floribunda.**

A small evergreen shrub growing three to four feet high, with straight stem and symmetrical crown of dark green leaves. Its upright panicles of purple and white flowers are exquisite, and so fragrant that they will perfume a large room, and are almost constantly produced, the plant blooming when only a foot tall. It makes a delightful pot plant and is one of the very best of the new plants. 25c. each; larger, by express, 50c. each.

**Myrtus Tomentosa.**

*(Downy Myrtle.)*

A very handsome small evergreen shrub, from Northern India, bearing beautiful pink, five-petaled flowers, resembling in size the Dog Rose. The flowers appear in such wonderful profusion that the leaves of the plant are almost completely hidden, and the branches weighted to the ground. The flowers are followed by fruits about the size of a gooseberry, red in color and of an agreeable sweetish taste. 15c. each.

**Magnolia Grandiflora.**

The wondrous Magnolia of the South—the most magnificent of all our Southern broad-leaved evergreens. Leaves very large, much like those of the Rubber Tree, dark, shining green above, and a beautiful rusty brown beneath, forming a striking contrast. Flowers six to eight inches across, creamy white, waxy and powerfully fragrant. Forms a majestic tree sixty to eighty feet high. Not considered hardy north of Washington, though a well protected specimen in Philadelphia blooms annually. But as it begins blooming while quite small it can be treated as a tub plant and wintered in the cellar. The cut conveys little idea of the great beauty of its leaves and flowers. Price of fine pot-grown plants which are sure to live and grow off finely, 25c. each; larger, 40c. each.

**Magnolia Fuscata, or Banana Shrub.**

Of all the Magnolias this Chinese evergreen species is, perhaps, the most valuable for pot culture on account of its very dwarf habit, growing only from two to four feet tall. It has small elliptical-oblong leaves, the adult ones smooth and shining, while the younger ones, as well as the branches and leaf stems, are covered with brown tomentum. When blooming it completely covers itself with a profusion of small, cream-colored, erect flowers of the most exquisite fragrance, similar to that of a ripe banana, which gives it its common name. The flowers are so powerfully scented when the sun shines, that one or two are sufficient to perfume a large room. It is perfectly hardy in the South where it is universally loved by all who know it. Considering how difficult it is to propagate, our price is very low; and our plants are exceptionally strong, thrifty and large. Fine plants, 30c. each.
Magnolia Glauc.

Laurel Magnolia or Sweet Bay. A beautiful shrubby species entirely distinct from the others. Leaves small, glossy green above and silvery white beneath, forming a most beautiful object when stirred by a breeze. Flowers about the size of a silver dollar, creamy white, and delightfully fragrant. Perfectly hardy in Massachusetts, but can be treated as a tub plant further north. Price, 3c. each; 3 for 50c.

Nerium Oleander.

The Oleanders are too well known to require extended description, but we may say that this magnificent class of plants has been shamefully neglected. No plant is easier to manage, the flowers possess a fragrance almost rivaling the Rose, and a well-grown specimen in bloom is an object of great beauty. In the fall they may be removed to the cellar, where they will require no further attention until spring. By a little care this plant may be trained in the form of a perfect miniature tree, which is the most satisfactory and ornamental shape when grown as a pot or tub plant. A very desirable point in its favor is that it may be grown in a very much smaller pot or tub than would be required by almost any other plant of the same size. Should have good drainage and be watered plentifully. Here they are perfectly hardy when fullgrown and succeed in any quality of soil. Should be grown by everybody.

**Oleanders.**

*Rosa Splendens*—Double pink, very fragrant. A beautiful variety, producing its flowers in great abundance. Price, 10c. each; 3 for 40c.; fine large plants, by express, 10c. each.

*Double White*—Beautiful beyond description; forming a lovely contrast with the pink variety. Price, 25c. each; larger, by express, 40c.

*Single White*—This is the most profuse flowering shrub we know of, and certainly one of the most beautiful. It loads itself with such quantities of exquisite flowers that the foliage is almost completely hidden. Price, 25c. each; 3 for 40c.; fine large plants, by express, 30c. each.

*Carneum*—A very free flowering and exceedingly beautiful variety. Flowers single, pure white with deep pink lines in the throat, producing the most exquisite effect imaginable. 25c. each.

**SPECIAL OFFER**—We will send one each of these four fine Oleanders (amounting to 75c.) to any address for only 50c.

---

You need pay no Express Charges on plants we send you. Read the conditions on Page 1.
Poinciana, or Bird-of-Paradise Flower.

Poinciana Pucherrima.—A beautiful shrub with finely planated, Mimosa-like leaves. The new growths completely covered all the time with delicate orange and red flowers, the stamens and pistil very long and curving upward, giving the flower a most curious appearance. A perfect blaze of color when in bloom. Is easily grown from seed and begins blooming when only a foot tall. Fine plants, 35c. each; larger, 50c.

Poinciana Pucherrima, var. flava.—This variety seems to be practically unknown outside of the West Indies and South Florida. Flowers bright, clear yellow. A fine companion for the orange and red Poinciana Pucherrima offered above. Price 15c. each; larger, 20c. each.

Poinciana Gilliesi.—Hardly in all the lower South, growing in the open ground ten feet high. A very free bloomer, producing large heads of lemon colored flowers with long scarlet stamens. Very distinct from the above. Price 30c. each.

Poinciana Regia.—The Royal Poinciana, or Plameworthy of Madagascar and the West Indies. One of the most beautiful tree-known, having immense decompound leaves of a very dark, rich green, giving it a striking tropical effect. As a pot plant it is as effective as any of the finest Palms, and growing among other pot plants will lend a tropical effect hard to obtain with any other plant. It is as easy to grow as a Geranium, and all who purchase it may rest assured they have a plant as rare as it is beautiful. Fine plants, only 25c. each; larger 40c. each.

Plumbago Capensis.

One of the very finest flowering plants in cultivation, not only on account of its delicately colored and beautiful flowers, but it is completely covered with bloom almost throughout the year. The color of its flowers is a most delicate and quite indescribable shade of light blue rarely found in any other flower. Equally desirable as an all-the-year-round pot plant, or for bedding out during the summer. Flowers produced in large heads. 20c. each.

P. Capensis Flora Alba.—A new and rare plant, the exact counterpart of P. Capensis, except in color, which in this beautiful novelty is a creamy white. Very choice and desirable as a companion to the above. 30c. each.

P. Sanguinea.—A pretty winter blooming sort, producing large spikes of rose carmine blooms, which last a long time. A splendid house plant. 35c. each.

SPECIAL OFFER.—One of each sort, amounting to 60c., for only 50c.

The Plumbagos should be cut back hard after flowering, and may be rested during the winter by keeping them rather dry. Here they bloom constantly and withstand drought, water and hottest sunshine.

Rose, Clothilde Sourpet.

A magnificent dwarf Polyantha Rose, obtained by crossing the varieties Mignonette (Polyantha) and Mad. Damaisen (Tea). Like the Polyanthas, it is robust and very Hardy, its flowers freely produced and in immense clusters, but the flowers are unusually large, very double and Panama-colored. The outer petals are pearl white, shading to a centre of rosy pink, but varying sometimes on the same plant from pure white to deep silvery rose. It has the sorts and a hardy, long blooming variety. It flowers are so much larger than those of all other Polyantha Roses, they are borne so freely in such enormous clusters, and are so exquisite in contour and color, that it takes all beholders by storm. Do not fail to order at least one. Price, 30c. each; 3 for 50c.

Rose, Climbing Perle.

A grand new rampant running ever-blooming Rose, a "sport" from the delightful old Perle des Jardins which furnished the magnificent Sunset Rose a few years ago. This new sort possesses all the good qualities which makes its parent so famous, viz.: a strong healthy constitution, freedom of bloom, and the most beautiful deep yellow flowers, familiar and dear to every lover of choice Roses. For the South, where it is perfectly Hardy, it is the most beautiful and petunia and. As a pot plant it will give the greatest satisfaction. Fine strong plants, 25c. each; 3 for 50c.

SPECIAL OFFER.—We will send one each of these two magnificent new Roses for only 50c.
Russelia Juncea.

The cut conveys a very slight idea of the great beauty of this splendid basket plant. Its habit of growth is neat and very graceful. It forms a great mass of slender, rush-like stems, which are completely covered almost the whole year round with the most beautiful, tubular, bright scarlet flowers, which are very conspicuous, a color which is scarce in basket plants. Price 15c. each.

Spanish Dagger, or Yucca Aloifolia.

One of the most imposing and tropical-appearing plants with which we are acquainted, and it will stand any amount of neglect except too severe freezing; but is hardy as far north as South Carolina. It is always ornamental from its smallest size until it becomes an imposing specimen. Leaves very dark green, stiff and pointed, forming a fine head. Begins blooming while quite small, producing an immense head of creamy, bell-shaped flowers, followed by Banana-like fruits. As a decorative plant it cannot be surpassed, being fully as desirable as the finest Palms, and even more striking in appearance. We can furnish the canes or trunks in lengths from one to two and one-half feet. These are old plants as large round as a man's wrist, or larger, and stripped of their leaves. Every one of them will root at once on being potted, no matter if they have lain dry for months, and put out a fine head of leaves, soon forming a grand specimen which it would require years to produce from a small plant. We have thrown a lot of the trunks on the ground, and let them lie exposed to the burning sun for six months; then stripped off the dead leaves, dug holes and planted them like fence posts, and without a particle of further care they every one rooted quickly and grew off vigorously. Fine mailing plants, 35c. each; 3 for 50c. Canes or trunks in lengths from 1 to 3½ feet, by express, at 50c. per foot.

Thevetia Neriifolia, or Geigar Apple.

Closely related to the Oleanders, and, as far as we can learn, entirely unknown at the North. A rare, quick-growing shrub resembling the Oleander, but more beautiful; leaves narrower and glossy, and the plant always in bloom. Flowers bell-shaped and pale yellow, followed by the most curious appearing green "apples" containing equally rich, large seeds, which are often worn as charms by sailors, and by negroes of the West Indies, by whom they are known as "lucky seeds." It bears several degrees of frost unharmed, and should be widely cultivated in South Florida as a lawn plant, and at the North as a half-hardy shrub. A plant of great merit. 20c. each, fine, large plants, 40c. each.

Thevetia, Salmon.

A rare and distinct variety, unnamed and almost unknown. Like the above variety in every way except the flowers which are of a beautiful salmon color. The two make fine companions. 35c. each; fine large plants, 40c. each.

Tecoma Stans.

Known in this state as Yellow Elder and Yellow Bignonia. It is a magnificent shrub belonging to the Bignonia family, and in the winter is a "glory of golden yellow flowers," which are large, tube-shaped and completely cover the plant, often weighing the branches to the ground. Something entirely new for a pot or tub plant at the North, and sure to become a great favorite. Very valuable in this state as a screen for unsightly fences, buildings, etc., sprouting readily from the root if cut down by frost, and blooming the same season. 50c. each, 3 for 50c.

Tabernæmontana Coronaria

Fl. Pl.

(Adam's Apple. East India Rose Bay.)

This is not a new plant, but has only lately come into general cultivation, but now that its great beauty has been recognized the demand for it seems unlimited. It forms a neat shrubby plant—somewhat like the Cape Jessamine—and for months at a time is completely covered with the most beautiful double waxy-white flowers, with elegantly crimped petals, fragrant at night. One of the very choice things which can be procured from but few sources. Fine plants, 25c. each.
Choice Climbing Plants.

Some of the most beautiful creations of nature are wrought in vines. They beautify whatever they touch, be it the mansion of the wealthy or some dead and decaying monarch of the forest. The following assortment is a choice one, embracing perfectly hardy sorts for out-door planting, and delicate, tender sorts for the window garden. If you have a window or piazza to shade, a summer house to beautify, an unsightly fence to screen, or an old stump to hide, you cannot find anything in the way of perfectly hardy plants better for the purpose than the two Clematis, the Honeysuckles, Yellow Jessamine and Trumpet Creeper. Plant vines in abundance, their airy gracefulness and beauty will prove a perpetual delight to all who behold them.

Abras Precatorius, or Crab’s Eye Vine.

This is the so-called “Wonderful Weather Plant,” which has created a great amount of interest, both in this country and Europe. Aside from whether it does or does not correctly forecast the state of the weather, it is certainly a most beautiful climber, either for pot culture or the open ground in summer. It is covered with delicate pinnate leaves, and clusters of yellow flowers followed by bunches of pods which, when dry, burst open disclosing brilliant red seeds with black eyes; these are used for making various articles of jewelry, etc., and for mixing with baskets of seashells. The beauty of the bright yellow flowers and gleaming red seeds on the back-ground of feathery green foliage is better imagined than described. Fine, strong plants, 35c. each.

Climbing Asparagus, Tenuissimus.

The fine foliage of the common vegetable Asparagus has always been admired. Imagine that plant transformed into a delicate climber with finer and more limy foliage, transforming everything it touches with the most airy and delicate greenery imaginable. It can be grown like Sisalax, on strings or a trellis, and will attain a great length. For bouquets its foliage is simply indispensable, and will keep for several days after being cut, without withering or changing color. Trained over windows or over white curtains the effect is simply bewitching. Nice plants, 36c. each.

Antigonon Leptopus, or Rosa de Montana.

A splendid tuberous climbing plant of Central Mexico, described by its discoverer as one of the most beautiful climbers he had ever beheld. Its beautiful rose colored flowers are produced in racemes two feet long, and in such profusion as to give the resemblance of roses at a distance; hence one of the Mexican names is Rosa de Montana, or Mountain Rose. In the North it should be wintered in the house or cellar, but in the South it is perfectly hardy, thriving wonderfully, and should be found in every yard. Strong roots’ 50c. each; 3 for 40c.

Allamanda Hendersonii.

No description can do justice to this superb plant, which may be trained as a climber or shrub, at the will of the cultivator. Try and imagine a plant so completely covered with immense tubular flowers five inches in diameter, that scarcely a green leaf is visible. These flowers are a rich velvety yellow, with fine white spots at the throat, which is delicately marked with red and brown; the lobes are thick and waxy, tinged with brown on the outer surface. During the summer it may be grown on the piazza as a pot plant, or bedded out where its profusion of golden flowers will prove a source of constant wonder and delight. The cut conveys a little idea of the beauty of the flower. Nice matting plants, 25c. each; extra strong, from three inch pots, 30c. each.

A. Nerifolia.

An elegant shrubby species producing tubular yellow flowers: throat streaked with dark orange. The plant rarely exceeds three feet in height, and will bloom freely either on the piazza or in the open ground. In this state it forms an elegant shrub, spreading up readily if frozen down. Price, 30c. each.
Akebia Quinata.

A beautiful hardy Chinese climber of rapid growth, suitable for either sunny or shady situations. Its quinate leaves are almost evergreen at the North, in the South wholly so, and it is among the earliest vines to flower, its curious purple blossoms having a delicious perfume. It roots deeply and consequently stands drought, it is free from all insect pests and being closely clothed with its refreshing and really delicate foliage from the ground up, it is far more graceful and appropriate for porch decoration than the Wisteria and other vines often used. Planted in rich soil at the base of old trees it will twine around them, completely covering the branches from which it will hang in graceful festoons. Price, 30c. each.

Bignonia Capreolata.

A very beautiful evergreen vine closely related to the Trumpet Creeper, and is one of the few self attaching vines. Flowers tubular, orange-red, very handsome and produced in the greatest profusion over a period of four or five months in the year. Its leaves are very dark green and glossy, produced in opposite pairs with the most perfect symmetry, and it is a most beautiful and highly ornamental vine out of bloom as well as in. We have one end of a building clothed so densely with its matchless green that the wood cannot be seen, and when in bloom it looks at a distance like an immense crimson curtain. Michan's Monthly, of Philadelphia, says of it: "it is not found wild north of the Potomac, and seldom planted farther north under the belief that it is not hardy. It does not like sun in winter, as indeed few evergreens do. In the partial shade of the large trees in Bartram's famous garden was a fine specimen on a trellis probably half a century old. One of our subscribers in Germantown, Pa., has one on the southeast side of his house which covers the wall to the third story, and flowers profusely every year." It will probably prove hardy in any part of the North, if planted where it will not be exposed to the winter sun. It is beautiful as a pot plant trained on a trellis, and in the window will begin flowering in February. Plants, 10c. each.

Bignonia Alba.—An exceedingly beautiful species from Guiana. Flowers tube-shaped, pure white with yellow throat. A very rare plant which we do not think is offered by any other firm in this country. Not hard at the North. Plants, 20c. each.

Bignonia Tweediana.—A rare and very choice species from Buenos Ayres, probably not offered by any Northern firm. An evergreen climber, in foliage and manner of growth much like Bignonia Capreolata, but the flowers are a rich, golden-yellow, and instead of being tube-shaped, are more flat, like a Petunia flower; and are deeply five-parted and very large. Hardy in the lower South, and should be universally planted for cloistering trees, buildings, etc., for which purpose it is especially adapted, as are also B. Capreolata and B. Chamberlaynii, all three self-attaching vines. 30c. each.

Clematis.

The two species of Clematis offered below have bell-shaped flowers instead of opening flat the same as most common sorts. The roots are perfectly hardy, the top dying down to the ground every fall, coming up in the spring and growing ten to twenty feet each season, and blooming in greatest profusion. Each year, as the roots become stronger, they make a greater growth and continually increase in value. The cuts convey some idea of their beauty.

Clematis Coccinea.—Intense rosy scarlet, very fine. 30 cents each.

Clematis Crispa.—Fine deep blue, with a white border and deliciously fragrant in which it differs from most sorts. 20c. each.

SPECIAL OFFER.—These two beautiful companions should always be growing near together, and we will send one of each for 5c.

Clematis Virginiana, or Virgin's Bower.

A native plant of rapid growth, and one of the most beautiful and desirable of our perfectly hardy and ornamental vines. It possesses a twofold charm in being as ornamental in fruit as in flower. In summer it is smothered under a sheet of small white flowers, succeeded in autumn by seeds with conspicuous feathery tails. 10c. each.

Cissus Incisa.

An exceedingly choice and beautiful climber, and although a native of the tropics, its roots are perfectly hardy at least as far north as Philadelphia. Leaves compound (three leaflets), thick, waxy, shining and most beautiful. A very rapid grower, sending down long air roots. A curious and interesting vine. 30c. each.

You need pay no Express Charges on Plants, Bulbs or Seeds ordered from us. We will fully prepay all Express Charges to your office under the conditions fully explained on Page 1. Read them.
Clerodendron Balfouri.

A plant of the greatest beauty which will bloom the year round and may be grown as a climber or trained into bush form. The flowers are bright scarlet, each encased by a bag-like calyx of pure white, presenting a most beautiful and striking contrast; the panicles of flowers upwards of six inches in width. If given a light, rich soil and shifted from smaller into larger pots as needed, it will bloom continually during the entire year. A plant has been kept in full bloom a number of years in succession with this treatment. It makes a fine piazza plant during the summer, or may be bedded out in a partially shaded spot. It is a plant which will give the most unbounded satisfaction. Fine, thrifty plants, 35c. each.

Clerodendron Whiteii.

A very strong climber with large, thick, evergreen foliage, and flowers produced in immense corymbas, reddish-brown, edged with white; the fruit, or seed pod, is very peculiar, resembling two bananas fastened together. A very rare plant, and a fine companion to the above species. Strong plants, 25c. each.

SPECIAL OFFER.—One plant of each variety (amounting to 5c.) will be sent for only 35c.

Eccremocarpus Scaber.

A half hardy climber of exceedingly vigorous growth and a most profuse bloomer during almost the entire year. A close relative of the Trumpet Creeper but smaller and more delicate in stems, leaves and flowers. The latter are tubular, orange and scarlet and borne in dense racemes on the ends of the branches. Leaves pinnate and of a beautiful dark shining green. The plant may be trained as a climber, or as a shrub by cutting it back and not furnishing it anything to climb on. Treated in this way it makes an elegant pot shrub, almost constantly in bloom. Fine for training in front of piazzas in Florida. 35c. each.

Three Best Honeysuckles.

These favorite hardy climbers hardly need description. Beautiful in foliage, habit and flowers, fragrant as the Rose and flourishing in almost all situations, they occupy, and deservedly, one of the first positions among perfectly hardy climbing plants. Among flowers none are more classic in flower lore, and the associations connected with the fragrant Honeysuckles real home vines, to have near you, climbing over your doors and windows, are now extensively employed in forming flower fences, often

will render them always popular. For there is nothing more pretty or really desirable as a dividing line between yards. First, a fence of wire strands or netting is erected, and then Honeysuckles planted along its base and quite close together. In a short time the vines take full possession and convert the fence into one of the loveliest objects imaginable.

Himalana—An evergreen variety and one of the most valuable of recent plant introductions. It blooms almost continually from June till frost, and attains to the height of twenty and even thirty feet. The flowers, which are very fragrant, are pure white when they first open, but assume a creamy tinge in a few days. Price 15c. each.

Golden Leaved.—A beauty which becomes a great favorite with everybody. The small leaves are so netted and veined with yellow as to give this hue the predominance; flowers yellow and fragrant. Fine for baskets or vases as well as trellises, or it may be trained as a low shrub on the lawn if no support is furnished it. 15c. each.

Red Coral, or Fuchsia-Flowered Honeysuckle—A very handsome native climber, hardy everywhere and blooming almost constantly, the flowers followed by very ornamental, red, currant-like berries. Flowers beautiful coral-red outside and yellow within; long and tube-shaped, borne in large clusters and drooping like a Fuchsia. The vine is an evergreen, a strong, rapid grower and droops in a beautiful weeping form. If trained on a single stake on the lawn it will form a perfect fountain of green scarlet and yellow. Very distinct from the Honeysuckles in common cultivation. 15c. each.

SPECIAL OFFER.—For only 35c, we will send a nice plant of each of these three lovely Honeysuckles.
Hoya Carnosa.

A beautiful climbing plant with finely formed, thick, waxy foliage. Its beautiful and curious flowers, which are produced in clusters of the most perfect symmetry, have a pearly, wax-like appearance, and are star-shaped, with a pink or crimson center. So sweet are the flowers that a honey-like juice drops from them. It is a plant of the easiest culture and continues to increase in beauty for years. It makes an excellent plant for a warm sitting-room, as it grows freely without direct light. It does not require much water, and the dust is easily sponged off its thick, waxy leaves which remain on the plant for years. One peculiarity of the plant is that if the flowers are not cut but are allowed to fade on the plant, they will fall off the flower-stem, while the stem will remain on the plant and produce another cluster of flowers the following season. Nice plants, 25c. each.

Ipomoeas, or Moonflowers.

These are truly magnificent climbers, producing exquisitely beautiful flowers in the greatest abundance. Where rapid-growing summer vines are wanted nothing can excel them, as the rapidity with which they will clothe any object they are given to climb on is equalled by but few, if any, other plants. To secure the quickest and most satisfactory results, get the plants well established and to growing in the window before it is time to plant them out.

Blue Dawn Flower (Ipomera Lointil) — A magnificent, quick-growing perennial climber; the flowers produced in bunches of a half dozen; the individual blooms are trumpet-shaped, about four inches across, of a rich velvet blue, with five purple rays, grows about twenty-five feet in one season, and is a most attractive climber. 15c. each.

Ipoma Mexicana — A beautiful day blooming species with flowers of a violet crimson color, looking like a piece of rich satin. It has strong, tuberous roots like the Dahlia, and should be wintered in the cellar. It makes a strong growth, legus flowering early and blooms profusely all summer long. 25c. each.

New Hardy Tuberous-Rooted Ipomoea (I. Pandurata) — This magnificent species is perfectly hardy all over the United States. Its growth is very neat and graceful; leaves heart-shaped, flowers very large, three and a half to six inches across, pure satin-white, with a pinkish-purple throat-shading off deeper in the tube. Many flowers are produced on the same peduncle, greatly prolonging its season of bloom. The flowers which are bell-shaped, covered with leaves which are as exquisite as lace work. They are deeply cleft all around, much like the Skeleton-leaved Geranium, but more beautiful, and with the stems and branches completely covered with fine hairs. Flowers bell-shaped, pure white with a purple throat, remaining open all day. May be grown from seeds which must be soaked until they swell before planting. The plants may be wintered over in the window, conservatory or greenhouse. Plants, 15c. each; seeds, 3c. per packet.
PIKE & ELLSWORTH, JESSAMINE, PASCO CO., FLA.

Manettia Bicolor.

This is truly one of the most beautiful and desirable flowering vines in cultivation to-day, and of all the numerous novelties sent out during the last ten years this undoubtedly deserves the greatest attention. It is a vine which blooms almost, if not quite, every day in the year, though the season of its greatest profusion of flowers is from May to October. The flowers, which are from one and a half to two inches long, are of the most intense fiery scarlet, except the tip ends of them which are a bright clear yellow color. They are covered with a moss or hairy substance exactly like the nap of plush or velvet cloth, which gives them not only an odd but exceedingly beautiful appearance. Being of great substance each flower keeps perfect on the plant for weeks, and then does not fade but falls off. The vine itself and its leaves, are a beautiful dark, rich, shining green, sewing as an excellent foil to set off the exquisite beauty of the myriads of gleaming flowers. When grown as a pot plant it may be trained on a fancy trellis with excellent effect, or be allowed to encircle the window with a delicate wreath of scarlet, yellow and green. If planted in the open ground in the spring it will cover a large trellis and be full of flowers every day. We guarantee our stock to be true to name, and our customers will take no chances whatever in ordering it from us. Fine plants, $0.50 each; $5.00 per box.

Malayan Jessamine.

(Rhyncospermum Jasminoides.)

A most beautiful climbing plant with glossy evergreen foliage, and producing in the greatest profusion the most delicate, sweet-scented Jasminine-like flowers of the purplish white. A well-grown plant will be as completely smothered with flowers as our cut indicates. But one does not have to wait for the plant to attain size before having its exquisite flowers, for it blooms when very small, and we have seen cuttings only two or three inches long, in thumb pots, bearing clusters of perfect flowers. The flowers are of a peculiar rotative form, something like a wheel, and several are borne together in a loose, graceful cyme. One of the cymes combined with a Rose Geranium leaf, makes the most delightful buttonhole bouquet imaginable. In the Southern States, from Florida to Louisiana, it is perfectly hardy, and we know of a house in the former State which is completely covered with it, even the chimney. It is absolutely without faults as an ornamental, flowering climber, having no insects attacking it, enemies and requiring no coothing whatever, being abundantly able to cope with conditions which would kill out many vines. Its most productive season of flowering is during April, May and June. Fine, strong plants, 30c. each; $3.00 per dozen.

MALAYAN JESSAMINE.

will get fresh, sound tubers directly from the ground, that will be absolutely sure to sprout and grow finely. After being received they should be kept in a pot or box of moist soil until spring, and then planted out in a hole six or eight inches deep, but covering the tuber with only about two inches of soil until it has sprouted and grown eight or ten inches—and then fill the hole full of soil and it will require no future attention except to be supplied with something to climb on. In order to place it within the means of every flower lover in the land we offer fine flowering tubers at the low price of 15c. each; $3 for $3.00; 6 for $0.60. Extra large tubers, 25c. each; $2.50.

SPECIAL OFFER—These fine fromoras amount to 90c. at catalogue prices. For only 65c. we will send one of each.

MANETTIA VINE.
Gelsemium Sempervirens, or Yellow Jessamine.

Doubtless almost every one has either read or heard of the famous Southern Yellow Jessamine—a pot-grown specimen of which is seen in the cut. Tourists spring ecstatics over it, and carefully press sprays of the exquisite blossoms to carry to their Northern homes as mementoes of a winter spent in "The Land of Flowers." But it does not seem to be generally known that it is one of the easiest grown climbers in cultivation, succeeding in any soil—wet or dry, rich or poor—though like all plants, fully appreciating and repaying good cultivation. It is quick-growing, has beautiful shining evergreen foliage, and for several weeks in the spring is completely covered with its beautiful golden-yellow, exquisitely sweet-scented, funnel-shaped flowers. A large vine in full bloom is a sight never to be forgotten, and one beyond the power of pen to describe. North of Washington the vine should be laid on the ground and covered with straw, evergreen boughs or rubbish. It may be grown in a pot or box, trained on a trellis and wintered in the living room or cellar, which would, perhaps, be the best plan at points far North where the winters are unusually severe. As a trellis plant for the window nothing can be more beautiful and desirable, as it blooms young and is ornamental at all times. A well grown specimen would create a sensation anywhere. It is deserving of extensive cultivation, and we hope its dissemination will not cease until it is grown by every one who loves beautiful flowers. With slight protection it has proved perfectly hardy in Illinois, and also in Philadelphia. Price of fine pot-grown plants, which are sure to grow off rapidly, 15c. each.

Pereskia Aculeata.

Or Barbadoes Gooseberry.

A climbing Cactus with true leaves, much like Lemon leaves, but more fleshy, with stout spines at the base of each leaf. Bears in the greatest profusion the most exquisite single white flowers resembling wild Roses, and of almost overpowering fragrance. These are followed by edible fruits about the size of a gooseberry. No one would ever mistrust from its looks that it belongs to the great Cactus family. It is almost unknown at the North, except as a stock on which to graft the Lobster Cactus. 15c. each; 3 for 40c. "A small Pereskia Aculeata Cactus in a tomato can has twenty-seven open flowers. It is quite a small plant. I think it lovely."—Mrs. M. E. C. Pearce, La.

Passiflora Incarnata.

(May Pop or May Apple.)

This beautiful Passion Flower bears a profusion of lovely purple and white blossoms, followed by orange-colored fruits as large as an egg or an apple and filled with a delicious yellow pulp. When cut, the fruit will perfume the atmosphere the same as a musk melon. One of the most ornamental and rapid growing climbers in cultivation, and certainly one of the most desirable of all the Passifloras for general

Passiflora Pfordti.

One of the most beautiful of the Passion Flowers, and one of the very best for pot culture, as it begins blooming when very small, often while the vine is less than six inches long; and as the vine attains size it flowers most profusely. The flowers present an exquisitely beautiful and curious appearance, quite impossible to accurately describe. They are of exceptionally large size, often five or six inches across, the sepals pearly white, the petals broad and of a lovely violet pink color. The numerous filaments are of a beautiful dark blue, with rings of white near the base, contrasting beautifully with the dark brown color below. 15c. each.

Passiflora Coccinea.

A rare South American Passion Flower bearing beautiful scarlet flowers with orange-colored rays and velvety bracts. The flowers are produced during a period of several months, and are followed by fruit full of sweet, juicy, edible pulp. Covered with its brilliant flowers, fruits and glabrous, coarsely toothed leaves, it is a climber as strikingly beautiful as it is rare and desirable. 30c. each.
Solanum Jasminoides Grandiflora.

This is one of those accommodating plants which may be grown as a beautiful climbing vine, or in bush form if kept pinched back. As shown by the cut it completely covers itself with very large clusters of star-shaped, Clematis-like flowers which are pure white with a violet tinge on the back. It begins blooming while very small, and is always full of flowers whether treated as a pot plant in winter or in the open ground in summer. Fine plants, 10c. each.

Solanum Azureum.

This is a beautiful new and exceedingly rare species from the West Indies; one of the most beautiful we have ever seen and a lovely companion for the above. Its foliage is deeply and beautifully cut, and its lovely star-shaped fragrant flowers are the richest and most delicate blue, with bright golden stamens, and are produced in large clusters like great bunches of Wisteria flowers or clusters of grapes, and are followed by bright red berries as large as marbles, that remain on the plants for weeks. The plant is almost always in bloom, and the bright blue and yellow flowers and bunches of red fruit commingled forms one of the loveliest objects imaginable. Fine plants, only 25c. each.

Trumpet Creeper, or Tecoma Radicans.

For cultivation in all parts of the country this undoubtedly combines more good points than any other climbing plant at present known. In the first place it is hardy everywhere without the slightest protection. It grows with the greatest rapidity and in any soil or situation; it clings to wood, stone or brick with a tenacity that defies the wildest tempest; produces an abundance of beautiful foliage, and for several weeks it hangs the ends of every twig and branch are weighed down with great panicles of lovely, bright orange, tubular flowers, of a thick, waxy texture, and remaining in perfection for a long time. The buds, too, are quite as ornamental as the flowers, and add greatly to the beauty of the vine. It is as long lived as the forest trees, each passing year only serving to add to its grandeur and beauty; and

as it has run a few inches above the top, pinching it off, causing it to form a dense, bushy head. The side shoots, from the ground up, must also be kept off, and attention paid to the head to see that it is well formed. By the time the stake has rotted away, the stem will be large enough to support the head, which will be a perfect fountain of living green, and added to this for several weeks in midsummer, when it is in bloom, it will be a perfect blaze of color. We have seen magnificent specimens growing in this form on Long Island, and in Central Park, New York. It ought to have a place in every yard in the land, and as we have the largest stock of it in the United States, we are able to place it at a price within the reach of everybody. Price of fine plants, which will immediately make a rapid growth, 15 cents each, 3 for 40 cents, 6 for 75 cents, 12 for $1.25.

It is now possible for everyone to have their order forwarded by Express, as we prepay all charges. Read all about it on Page 1.
GENERAL COLLECTION OF CHOICE FLOWER SEEDS.

UNDER this head will be found a select assortment of choice seeds of such flowers as are best adapted and most indispensable to the flower garden. We call special attention to our prices of these seeds. It will be seen that most sorts which are universally catalogued at 5 cents per packet we ask but 3 cents for, and other sorts which cost elsewhere 10, 15, 30 and even 50 cents, we list at 5 cents. Two cents is a small amount to save on one packet of seeds, but ten packets at 5 cents per packet cost 50 cents, while at 3 cents they cost but 30 cents—a saving of 20 cents which is enough to buy some choice plant from this Catalogue. And the seeds we offer are just as good as any, and superior to many that are offered to the public. They are perfectly fresh and reliable, pure and true to name, and sure to grow if given the proper conditions which all seeds demand. All seeds which cannot be grown to perfection in this country, we import from one of the largest and most responsible houses in Europe noted for the unrivaled excellence of its seeds—there being none better on the market. Our mixtures of flower seeds will be found particularly rich in colors, forms, sizes and varieties as they are specially prepared by ourselves, and we believe them to be superior to any mixed sorts offered in this country. We invite a trial of our seeds and feel assured that they will speak for themselves far more eloquently than our pen possibly can.

Per Pkt.

ABRONIA UMBELLATA GRANDIFLORA—Charming trailing plants, flowering in large trusses like a Verbena; color pure rose and very fragrant; an improved form of the old Umbellata

Imperial Dwarf—Blue, an excellent sort, very dwarf and compact

Imperial Dwarf—White, the same with pure white flowers

ANTIRRHINUM—(Snapdragon)—Forms clumps bearing spikes of beautiful, gay-colored flowers, which are very showy. Blooms the first summer from seeds, but lives over winter and flowers even better the second summer.

Tom Thumb—Charming varieties for dwarf beds and edgings; as they grow only eight inches tall. Sure to delight everybody. All colors mixed

ASTER—Fine for pot culture in winter or bedding out in summer, flowering continually and profusely.

Imperial Dwarf—Blue, an excellent sort, very dwarf and compact

Imperial Dwarf—White, the same with pure white flowers

ANTIRRHINUM—(Snapdragon)—Forms clumps bearing spikes of beautiful, gay-colored flowers, which are very showy. Blooms the first summer from seeds, but lives over winter and flowers even better the second summer.

Tom Thumb—Charming varieties for dwarf beds and edgings; as they grow only eight inches tall. Sure to delight everybody. All colors mixed

FAGAN—(Ageratum)—Dwarf Chinese; very fine; 20 finest varieties mixed

Large Globe-Flowered—Very fine; 20 finest varieties mixed
CANDYTUFT—One of the most valuable hardy annuals, invaluable for bouquets and cut flowers.

New Empress—A new, pure white and most beautiful Candytuft, as shown by our cut. It is a series of candleabra-shaped branches, each producing a large truss of pure white flowers, presenting a perfect pyramid of showy bloom throughout the summer.

Tom Thumb—Charming compact varieties, only four to six inches high; mixed colors.

CALENDULA—These are of the easiest culture and exceedingly fine for the garden in summer and for pot plants in winter. Constant bloomers, and the fall frosts do not hurt them.

Meteor—Very double and effective; petals small and each one marked with two shades of yellow.

Prince of Orange—Similar to Meteor, but much darker; exceedingly beautiful.

CANNA—These magnificent foliage and flowering plants are as easily raised from seed as corn, and will make flowering plants the first summer. Place the seeds in a cup, fill up with almost boiling water and let soak 24 hours before planting. Grand mixture.

CELOSIA, or COXCOMB—The old Coxcomb is familiar to all, but those who have not seen the improved sorts can but imagine what a degree of perfection they have been brought. Choice mixed sorts.

CLARKIA—Charming plants for beds, bearing in profusion large flowers of rose, red, white, purple, etc. Finest double and single mixed.

CLEOME PUNGENS ALBA—Just like the above in every way except color which is pure white. Very desirable and exceedingly beautiful.
Dahlia, Single—This is a magnificent strain, producing flowers of the greatest beauty and showiness. Very popular and invaluable for cutting. Our seeds are saved from the very best of the named varieties introduced within the last few years, and will produce a great variety of clear colors, besides elegant striped and punctuated sorts. Several dollars worth of plants can be raised from one packet of seeds, and they will bloom beautifully the first season........................................ 10

Dianthus—This family of Pinks is unrivaled for brilliancy and rich variety of color as well as for delicious perfume. They come into bloom very quickly from seeds, flowering continuously until frozen up in the ground. Perfectly hardy, blooming even better the second season. We believe the mixture we offer is the richest in this country, it embraces both single and double, some of them fringed and a vast range of forms, sizes and colors. All colors mixed..................................................

Mourning Cloak—A variety of great beauty, with very large and double flowers of a fine deep purplish black color, the petals elegantly fimbriated and bordered with pure white. For mourning bouquets, wreaths, etc., it is especially suitable and as a garden or pot flower it is very desirable..................................................

Eschscholtzia, or California Poppies—Very showy summer flowering plants, blooming profusely all summer; large saucer-shaped flowers of striking brilliancy. foliage finely cut and very elegant. They will thrive anywhere. Extra fine mixed..................................................

Gaillardia Picta Lorenziana—A beautiful showy double form of this valuable annual, flowering from early summer until frost, and unrivaled for cutting. Large round heads composed of 30 to 50 flowers of orange, claret, amaranth sulphur, etc. Finest mixed..................................................

Godebia, or Satin Flower—Handsome summer flowering hardly annuals of dwarf, compact growth, bearing in the greatest profusion beautiful large flowers of the most exquisite colors and shades. No garden is complete without a bed of these showy plants. Finest mixed..................................................

Hollyhock, Finest Double German—These bear long spikes of perfectly double flowers which are from three to four inches across. 16 choicest colors and combinations mixed..................................................

Larkspur—Charming flowers for garden and border decoration, bearing long spikes of flowers of many beautiful colors. The mixture we offer includes all the finest strains and colors.

Dwarf Mixed..................................................

Linum Mixed—Charming plants which will delight everybody, producing magnificent flowers of yellow, crimson, rose and blue..................................................
FRENCH MARIGOLD.

odor is given off by all parts of the plant when kept in a confined situation, particularly in dry weather. A

MARIGOLD—This grand old favorite, so effective for groups and masses, has been vastly improved so that the

perfectly double flowers are simply magnificent.

Double African—A grand mixture of both tall and dwarf sorts. 3

Double French—A grand mixture of both tall and dwarf sorts. 3

MALPE GANDIFLORA—Robust, hardy annuals, four to five feet tall, with large saucer-shaped flowers; crimson, rose and white mixed. 3

MIGNONETTE—Perhaps the most popular annual grown, on account of its deliciously fragrant flowers which are indispensable for bouquets.

Odorata Grandiflora—A fine large flowered form of the common sweet

Mignonette. 3

Golden Queen—Flowers of a golden hue, of dwarf and compact habit, highly effective. 5

Crimson Queen—A very finered flowered, robust sort, excellent for pots. 3

Petach—Decidedly the best sort for pots; numerous thick spikes of reddish flowers; very fragrant and a most excellent plant. 5

MYOSOTIS VICTORIA—This lovely new "Forget-me-not" is the finest of all for pot culture. Plants perfectly round, five to seven inches high, and sixteen to eighteen inches in circumference; completely covered with large umbels of flowers of azure blue with double center, remaining in bloom a long time. 10

PANSY—This flower needs no words of description, for its "baby face" are known and loved by all. Our "Grand Combination Strain," which will be found offered and described under the head of Specialties in Flower Seeds, is without a doubt the finest and cheapest strain ever offered to cultivators of this lovely flower. We have also prepared a fine mixture which we offer here at 5 cents per packet; but it should not be confounded with the 5 cent Pansy seed universally offered, as it is vastly superior, being composed of a large number of separate varieties of remarkable showy and rich colors. Fine mixed. 5

PETUNIA—For brilliancy and profuse and continuous blooming few plants can equal the Petunia. It has been wonderfully improved during the past few years and we now have flowers hardy and recognizable in the old-fashioned Petunia. This is particularly true of the strain which we offer under the name of New Peerless Petunias in Specialties in Flower Seeds. What we say of our 5 cent Pansy seed is equally applicable to our Petunia seed offered here; it is a superb strain and will produce very rich and effective flowers. Fine mixed. 5
PANSY.

**Petunia.**

**Pheidole Drummondii Grandiflora**—A new and greatly improved strain of the universally popular Phlox Drummondii, the flowers very much larger, as large as those of the Perennial Phloxes, and perfectly round, the petals overlapping each other, giving them a very beautiful and entirely distinct appearance. The colors, too, are exceedingly brilliant and clear, including pure white, champagne rose, brilliant scarlet, blood red, red-striped white, crimson with white eye, etc. Finest mixed.

**Drummondii Nana Compacta, or New Dwarf Phlox**—These form little round compact bushes about six inches high, thickly studded with large flowers of all colors; splendid for low beds and pot culture, or for bordering beds of the other sorts. Fine mixed.

**New Star**—These new Phloxes have created a genuine sensation, and no wonder, for they are as beautiful as they are cold and unique. They embrace a wide range of colors and combinations, and almost as many shapes, from fimbriated, or toothed, to long pointed star forms. A bed of them is a fascinating object one never tires of studying. Fine mixed.

**Portulaca. Double Rose Flowered**—These brilliant flowered dwarf annuals are indispensable to every garden, blooming profusely every summer to autumn, no matter how dry or hot the weather may be. The seed we offer is grown with the most scrupulous care and saved from the best double blooms only. It is just such seed as is usually catalogued at 10 and 15 cents per packet. Finest mixed.

**Poppy, Shirley**—A recent novelty of the greatest merit, by many considered the finest of all Poppies. The flowers are large, exceedingly graceful and elegant; the colors pure, soft and varied, varying from blush-white, rose, delicate pink and carmine through innumerable tints to bright sparking crimson. All colors mixed.

**Iceland.**—See **Specialties in Choice Flower Seeds. Page 16.**

**Ricinus**—Known as Castor-oil Bean and Palm Christ. Very rapid grower, the leaves immense and very ornamental foliage, fine for subtropical effects on the lawn and for centers of beds. Varieties in finest mixture.

**Campanula.**—The finest large-flowered variety, the flowers white, blue, bluish or violet; the stems erect and strong, the flowers large and perfect; the seed which we offer is the choicest and finest possible.

**Sweet Williams.**—The finest selected variety, with a profusion of beautiful colors. Finest mixed.

**Rocin.**—Known as Castor-oil Bean and Palm Christ. Very rapid grower, the leaves immense and very ornamental foliage, fine for subtropical effects on the lawn and for centers of beds. Varieties in finest mixture.

**Schizanthus.**—Or Butterfly Flower. The richly colored blooms of this fine annual look like little butterflies and are borne in great numbers. The cut conveys but a slight idea of the beautiful and curious manner in which the flowers are marked. They are most charming. Finest mixed.
SALPÍGLOSSIS

GRANDIFLORA—

These new large flowered varieties are vastly superior to the old sorts, and are among the most beautiful of flowering annuals. The flowers are very large, of many beautiful colors and marked, veined and stained in the most exquisite manner. Per pkt., 50.

STOCK—GERMAN TEN WEEK—We offer an exceedingly fine mixture of these most popular annuals. The plants are all dwarf but large flowered, bearing large spikes of perfectly double sweet scented flowers. Suitable for either garden or pot culture. It is best to start the seeds in the house and transplant to the garden about the first of June. About fifty varieties and colors mixed......

SWEET WILLIAM—This popular old flower has been greatly improved and beautiful double varieties originated. Finest double and single mixed......

TROPÉOLUM, or NASTURTIUM—These old favorites are too well-known to need description. For showy and constant bloom few annuals can equal them.

Flax—Tall growing sorts. Finest mixed......

VERBENA—Of these well known trailing plants, so popular and valuable for bedding, we offer a superb mixture of all colors and combinations, including the purest white. (For Tom Thumb Verbena see Specialties in Flower Seeds. Page 33.) Finest mixed......

VISCARIA—Beautiful annuals, making a splendid show when massed; large round single flowers of white, scarlet, blue, flesh, etc., margined and marked with various colors. Finest mixed......

VINCA—Handsome, compact, bushy, perennial plants, growing about 18 inches tall, suitable alike for pot or sunny flower beds. They grow from seeds as readily as the commonest weeds, begin blooming when from two to three inches high and are a perfect mass of flowers until cut down by frost. The individual flowers are perfect, and the flowers are free-blooming. Mixed......

TALL MIXED—Tall, robust sorts producing large flowers of all colors; some striped......

Dwarf Mixed—Flowers same colors and equally as large, but the plants dwarf......

DOUBLE POMPON—These have long cone-shaped flowers only about half the size of the above Zinnias, of the most perfect and beautiful form and vivid colors. Finest mixed......
Evening Blooming Flowers.

It is an old and true saying that "variety is the spice of life," and it is as true in the flower garden as elsewhere. A most delightful variety of "spice" which should be added to every garden is a bed of evening blooming flowers. They possess a peculiar charm all their own, and will prove a perpetual delight to all who give them a trial. In the twilight—that most bewitching hour of the day—it is simply fascinating to watch their swollen buds burst open, and share with the humming birds and moths the delicious fragrance so freely dispensed on the dewy air. Their beauty lasts not only during the night but until ten or eleven o'clock the next forenoon.

**Datura Sweet Nightingale**—A grand evening flower, opening about sunset and lasting till noon the next day. Flowers pure white, nine inches long, and five or six inches wide at the top. Its delicious fragrance fills the evening air and can be detected a long distance. It is a free bloomer, producing one or more flowers every evening all summer. Seed can be sown in the ground or started in pots.

**Fastuosus Double**—This variety bears double flowers, one inside the other, as shown in the lower left-hand corner of the cut of group of night-blooming flowers. Very beautiful and interesting. Mixed.

**Mirabilis, or Four O'Clock**—One of the most brilliant and showy flowers and no trouble whatever to grow. They have been greatly improved of late years, and present some most striking and beautiful colors and combinations. Finest mixed.

**Tom Thumb**—These are new dwarf sorts of great value. They grow only about fifteen inches high, forming dense bushy plants with yellowish foliage thickly covered with beautiful flowers. They are very distinct and exceedingly attractive. Finest mixed.

**Nicotiana Affinis**—This magnificent night-blooming plant grows three feet high, branching and producing hundreds of white, tubular, star-shaped fragrant flowers which are three inches across, and fill the atmosphere, particularly at night, with a peculiar odor, similar to that of Lilium Longiflorum. The flowers are exquisite for bouquets, and if cut in the evening and kept out of the sunshine they will remain perfect a week, filling the room with perfume every evening. Sow early and transplant to three feet apart. Fine for the centers of beds of evening blooming flowers.

**Genothera, or Evening Primrose**—This charming evening bloomer is not appreciated as it deserves, for it is most beautiful and extremely easy to grow. Its large, saucer-shaped flowers and delicious perfume will charm anyone. Sow the seed in the open ground and they will bloom all summer.

**Acaulis**—Dwarf, the plants only growing six to eight inches high, covered with flowers six inches in circumference and silvery white.

**Acaulis Aurea**—Same as the above except the color which is golden yellow; very fine.

**Lamarckiana**—A tall-growing sort with large, brilliant yellow blooms.

---

**Evening Primrose.**

**Nicotiana Affinis.**
Ornamental Climbers.

No garden or collection of flowers is complete without an assortment of climbers. With their graceful, rapid growth they furnish grateful shade, and with their delicate drapery of green leaves and bright flowers they beautify everything they touch, transforming many an ugly object into a perfect dream of loveliness. Plant vines and plenty of them. The following sorts are all beautiful and very easily and quickly grown from seeds.

**Per Phl.**

**ADLUMIA CIRRHOSA**—Called Mountain Fringe and Alleghany Vine. A charming, biennial climber with feathery foliage and sprays of pretty flowers; perfectly hardy. Rose and purple mixed.......................... 5

**BRYONOPSIS LACINiosa**—A summer climber, growing several feet in length, with deeply cleft leaves, which are very beautiful. The flowers are followed by a profusion of small marble-like fruits, which are green, beautifully striped with white, turning bright red in the fall. It is very fine for trailing up around porches.......................... 3

**COB/EA SCANDENS**—A tall and very rapid growing climber, with large, bell-shaped purple flowers. Fine for the garden in summer, or house in winter. Plant seeds edgewise.......................... 5

**COCcINIA INDICA**—A beautiful climber with Ivy-like foliage, which is bright and luxuriant and never troubled with insects. Flowers followed by a profusion of fruits two inches long, which turn to brilliant scarlet spotted with white.......................... 5

**CONVOLVULUS MAJOR**—The well-known Morning Glory, unequalled for rapidity of growth and profuse blooming. We offer a grand mixture.......................... 3

**Mauritanicus**—A beautiful trailing variety for vases, baskets, etc., producing an exquisite effect. Flowers blue with a white and yellow throat.......................... 5

**IPOMEA**—Summer climbers of very rapid growth, with large and beautiful flowers. Finest mixed.......................... 3

**Quamoclit, or Cypress Vine**—Lovely, finely cut, misty foliage, thickly studded with small star-shaped flowers. Finest mixed.......................... 3
Gracils, or New Star Ipomea—The cut of this little jewel is no exaggeration whatever. The flowers are nearly an inch across, of a bright crimson-scarlet color with a large orange-colored star in the center, and remain open all day. They are borne on long, forked racemes which stand well out from the foliage, and in such profusion as to entirely cover the vine, appearing almost as if a red blanket were thrown over it. The vines branch and climb to a height of fifteen or twenty feet, covering a large space, beginning to bloom in June and continuing until frost. For forming screens, covering trellises, arbors, fences, etc., it beats anything we have ever seen.

New Hybrid—This variety is a great improvement in several respects on the old Moonflower which has for so long been popular. It begins to bloom from thirty to forty-five days earlier, has much larger flowers, from five to seven inches across, which are produced in equal profusion and have a charming fragrance, opens earlier in the evening, and remains expanded until the next forenoon. In a warm, sunny position it will grow with the greatest luxuriance and rapidity to a height of fifty feet, and in the soft moonlight the hundreds of immense saucer-like flowers produce an effect as indescribable as it is grand. If the seeds are started early in the house they will be fine, large plants when warm enough to set out and will soon be blooming profusely. Soak the seeds in hot water until they swell, then plant.

Michauxii, or Moonflower Blushing Beauty.

Treat seeds of these two varieties same as New Hybrid.

MAURANDYA—Charming and graceful climbers for the window, or open ground in summer, where they will continue to bloom until after there has been six to eight degrees of frost. The roots may be lifted in the fall and potted for winter blooming. Will climb or trail and are lovely for vases and hanging baskets. It is best to start the seeds early in the house. Finest mixed.

MOUNTAIN-APPLE, BALSAMINA, or EBONY Apple—A very interesting and ornamental climber, growing fifteen or twenty feet high and valuable for covering fences, arbors, trellises and piazzas. The fruits are followed by nearly round fruits, the skin rough and warty. When ripe the fruit is a bright orange color and splits open and turns back, revealing the fleshy, brilliant red interior, all forming a most striking contrast with the dense green foliage.

SWEET PEAS—Too well-known for description. We offer a grand mixture, including Eckford’s Superb New Hybrids and the magnificent named sorts. This mixture will prove a surprise and delight to cultivators of the old Sweet Peas.

THUNBERGIA—Slender, rapid-growing climbers with large beautiful flowers borne in the greatest profusion. If allowed to trail on the ground they make beautiful beds. Flowers buff, white and deep orange, both with and without a deep brown eye. Fine mixed.

TROP EOLUM LOBBIANUM—These are climbing varieties of the Nasturtium, of exceedingly rapid growth and with flowers of unusual brilliancy and richness. Fine for the garden in summer and the window in winter. Finest mixed, a great variety of colors.
Tropical and Semi-Tropical Fruits.

In this department will be found a fine selection of the most desirable and easily grown representatives of this interesting class of plants lately become so popular at the North. They are far more easily grown than have hitherto been supposed, and form a most desirable addition to any collection of plants. All plants of this class offered at the North are obtained from this State and we are certain that our customers will appreciate the privilege of obtaining them direct from where they are grown, and also that they will appreciate obtaining them at the extremely low prices we offer them at. To prove how very low our prices are for these plants, we will quote some of the prices of a Northern firm, making a specialty of this class of plants, whose catalogue we have by us: Figs, 50c. to $4.00 each; Sugar Apples, 75c. to $4.00 each; Bananas, $1.50 to $10.00 each; Trifoliate Orange, $1.25 each; Cattley Guavas, $1.00 each; Loquats, 75c. each; Mango, $1.50 each; Pineapples, $1.00 to $3.00 each; Pomegranate, $1.00 to $2.00 each; Sapodilla, $1.00 each; and Tamarind, 75c. each. The varieties we offer are carefully selected as the very easiest to grow and give satisfaction. They are everyone specially adapted for cultivation in pots or tubs, as they readily dwarf themselves under those conditions and fruit nicely. All except the Pineapples may be wintered in the cellar if desired to do so; but the majority of them are so beautiful in form, leaf, flower or fruit that they are well worthy a prominent position both summer and winter. They are no more difficult to grow than the average run of pot plants in cultivation.
Achras Sapota.

The Sapodilla or Naseberry, of spreading form, with thick, glossy leaves. The fruit can be compared to a large apple, with a fine sweet taste, and a rich, juicy, pear, with granulated pulp; almost equal to the Mango, and the taste does not have to be acquired. Very choice and rare. Price, 30c. each.

Anona Squamosa.

Sugar Apple, or Sweet Sap—A most delicious fruit resembling an inverted pine cone or a small Pineapple minus the crown; of a yellowish green color when ripe. Grows in the form of a bush and is most easily managed. 20c. each.

Bananas.

Everybody has doubtless seen and probably tasted the fruit of the Banana. But very few know that the plants can be grown in the North as successfully as Cannas or even Corn. They make grand decorative plants grown in large pots, kegs or tubs of rich soil. But they are particularly valuable for open ground culture in the center of beds of foliage plants, moist situations, etc. A gentleman in Illinois tells in the following words how easily they are grown in the open ground: "May I set out a very small plant of Hart's Choice variety, not over 15 inches high, in an entirely unprotected situation. By fall it had reached a height of 4 feet, and possesses six feet long and eighteen inches broad; the stalk measured over twenty inches in circumference at the ground." In planting dig a post hole six inches or more, deep, fill with rich soil and plenty of well decayed manure (they will thrive wonderfully in muck soil); set the plants in this and keep well watered during the summer, and they will make an astonishing growth. Just before frost cut all the leaves off that do not cut the stalk, dig them up and place the roots in a box of earth, and keep quite dry (to prevent growth) and they will winter as easily as a Cannas or Dahlia. The second summer they will bloom and then you will behold a sight you may never have dreamed of. Sometimes they bloom early enough in the season to mature their fruits. If you want to see the grandest plant that ever grew, plant a Banana. It will be the wonder of your neighborhood. And if you wish to astonish yourself as well as "the natives," remember that you cannot make the soil too rich for it, nor give it too much water. If you faithfully attend to these two points you will say, in the fall, that it has been a success. It is possible the plants in some sheltered position—the hotter the better—where the wind cannot strike them and whip the manure off, they will thrive and dissimulating them.

Dwarf or Cavendish Banana (Musa Carvenidis) — An extra fine sort; dwarf, but very strong, attaining a height of only six or eight feet. The magnificent leaves look as though sprinkled with gold. The yield of fruit enormous, sometimes as many as 200 or 300 in a bunch. Price, 30c. each; 3 for 40c. Larger, by express, 30c. each; 3 for 45c.

Orinoco Banana (Musa paradisiaca var. superbum) — A grand sort for bedding out; grows very large, producing a magnificent effect. Very hardy and should be grown everywhere as an ornamental plant. Price, 25c. each; 3 for 40c. Larger, by express, 30c. each; 3 for 45c.

Hart’s Choice (Musa Orientum) — Of medium height, stalk and mid-rib tinged with red. Bears early and is very hardy for a banana. Fruit unsurpassed in flavor. Price, 30c. each; 3 for 75c. Larger, by express, 40c. each; 3 for 1.00.

Cattley Guavas.

The common Guava is a most delicious fruit after one has formed a taste for it, but it possesses a musky odor unbearable to some. They are affected by the slightest frost, and must be of considerable size before they will fruit. But in the following varieties we have something entirely distinct. No musky odor or flavor, the plants hardy enough to stand any temperature above 20°, and for fruitfulness surpassing anything we ever saw. A plant 18 months old has borne 500 fruits; we have had plants less than 18 inches high, carrying 165 fruits, and a plant which could be covered by a box 4 feet square and 25 feet deep, held 1,000 fruits, blooms and buds at one time. They are everbearers after they become established, bearing blossoms, flowers or fruits in some stage every day in the year. Evergreen, with beautiful shining, thick Camellia-like foliage, they would make grand ornamental pot plants if they never bloomed or fruited. Can be wintered in the colder at the North or kept growing the year round. Should be planted in the open ground by everybody where the thermometer does not go below 20°.

Red Cattley, or Strawberry Guava (Psidium Cattleyum) — Fruit rather smaller than an English Walnut, of a fine claret color, and a flavor resembling that of the Strawberry; makes a beautiful colored jelly.

Yellow Cattley Guava (Psidium Leucium) — Foliage hardly distinguishable from the Red, but the fruit yellowish green, about the size of a quail’s egg, and has a slight acidulated flavor; also fine for light colored jelly. Considered even harder than the Red species. Fine mailing plants of either sort 15c. each; 3 for 40c. Larger, by express, 30c. each; 3 for 75c. One of each sort, mailing size, 25c. One of each sort, by express, for 50c.

"The two Guava plants received from you last year are flourishing and are covered with fruit."—Mrs. George A. Klapp, Miss.

The Fig.

The Fig dates back to the time of remote antiquity and should possess great interest on that account alone. But its fruit is so delicious and so easily raised, and the whole plant so ornamental and interesting that it should be grown everywhere. Those who have never eaten any but the dried figs of commerce cannot form any conception of the lusciousness of a fresh fig, or preserved figs and cream. They make splendid tub plants for the North, and are as easy to grow as a Geranium. They usually bear some fruit the first season, and the second season and thereafter will be literally loaded. Can be grown and wintered under the same conditions as the Pomegranate. Figs may be grown in the open ground as far north as Rochester, N. Y., where they are perfectly hardy when treated as follows: On the approach of cold weather tie the branches together closely, then bend the body of the tree downward as close to the ground as possible and fasten it there by tying to stakes. Then cover over and around with boards, over these a thick layer of straw, and over the straw a covering of four or five inches of s-h. Very large bushes or trees may be protected in this manner as the stems are very flexible. It is best to plant Figs in as warm a position as possible, such as the south side of a building or tight board fence.

Japan Loquat, or Eriobotrya Japonica.

A most beautiful plant, with large, beautiful evergreen leaves shaped like those of the Magnolia Grandiflora. One of the most productive and rapid-growing tropical fruit trees known. Its fruit is larger than an egg, kidney-shaped, and so deliciously flavored that a small boy has been known to eat twenty-five at a sitting. It is an evergreen with beautiful Laurel-like leaves from six to ten inches long, and two or more inches broad, the new growth of a rich wine color, changing to a dark shining green. A most ornamental pot or tub plant for the North. Should be planted by everybody in South Florida as it sprouts readily from the root if cut down by frost. Though it makes an immense tree in the tropics it bears in two years from the seed, and five-year old trees in this State have borne thousands of Mangos. Fine plants, 30c. each; larger, by express, 90c. each.

Mango, or Mangifera Indica.

One of the most productive and rapid-growing tropical fruit trees known. Its fruit is larger than an egg, kidney-shaped, and so deliciously flavored that a small boy has been known to eat twenty-five at a sitting. It is an evergreen with beautiful Laurel-like leaves from six to ten inches long, and two or more inches broad, the new growth of a rich wine color, changing to a dark shining green. A most ornamental pot or tub plant for the North. Should be planted by everybody in South Florida as it sprouts readily from the root if cut down by frost. Though it makes an immense tree in the tropics it bears in two years from the seed, and five-year old trees in this State have borne thousands of Mangos. Fine plants, 30c. each; larger, by express, 90c. each.

The Pineapple.

It was this delicious fruit a Hugenot priest described more than 300 years ago as being of such excellence that the gods might luxuriate upon it, and that it should only be gathered by the hand of Venus. It is one of the most beautiful decorative plants imaginable, and is well worth growing on that account alone; but it will fruit in a greenhouse, conservatory or a window. It is closely related to the Air Plants, and thrives in an ordinary, loose sandy soil, with plenty of moisture. It likes plenty of heat, though it will stand a variety of temperatures. Should be repotted frequently during the first year.

Red Spanish—The Pineapple of commerce. Ruddy yellow when ripe; flavor sub-acid, sparkling. Price 15 cents each, 3 for 40 cents.

Egyptian Queen—Very showy, of fine flavor and most prolific, bearing earlier and more surely than any other sort. Flavor something like that of a wild strawberry. Rare. Price 25 cents each, 3 for 65 cents.

Purple Seeded Pomegranate.

A remarkable seedling of the Sweet Pomegranate, which originated in this State, and of which there is but a limited stock. Mr. P. J. Berckmans, the well-known President of the American Pomological Society, writes that he has seen and tasted the best European varieties, and has seen the best, offered in this country, but that this is superior to any he has ever seen. Its distinctive feature is the very large size of its fruits, resembling a large red apple, a fine sub-acid flavor, and the deep purple of the grains of the pulp resembling clusters of rubies. The juice is as dark as port wine. The outside or calyx of the flowers looks like if cut out of very thick, red sealing wax, while the inside or petals look like crape or crimped tissue paper, of a deeper red. A fine pot or tub plant, well worth growing for its flowers alone. May be used for a pot or in a cellar pit. Fine plants, 20c. each; larger, by express, 90c. each.

Sweet Pomegranate (Punica Granatum)—Fruit large and juicy, possessing a fresh crispness, delicacy and sprightliness of flavor almost unrivaled among fruits. 3c. each.

Sour Pomegranate—Like the Sweet in every way except that the fruit is sour, and from it a very cooling and refreshing drink can be compounded. 3c. each.
